Company Profile & Services

ITW Construction Products

ITW Construction Products is one of seven major divisions of the Illinois Tool Works family, innovating, designing and manufacturing advanced industrial technology.

With five brands all at the forefront of technology and enterprise for their respective markets, ITW Construction Products are committed to providing advanced trade solutions for professional users.

A leader in technology, research and development

ITW Construction Products are known for their problem solving nature, and as such always remain a leader in technology, research and development; a trait that enhances our interaction and relationship with our customer and generates increased productivity for our end users.

CONSTRUCTION PRODUCTS

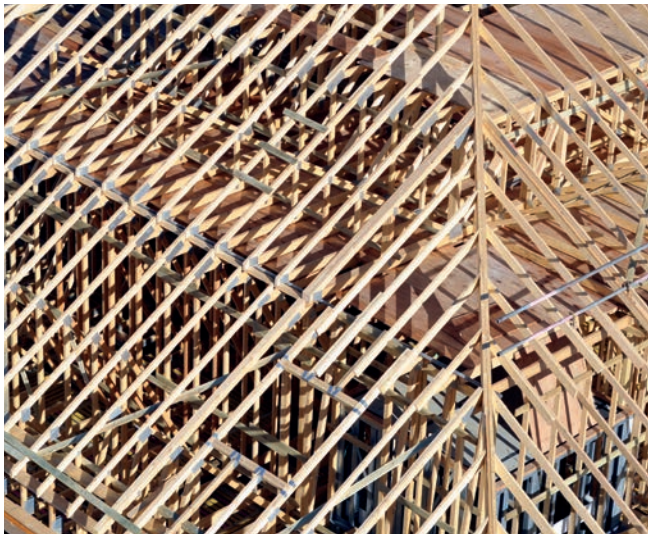
Part of a Global Company: ITW Inc.

ITW – We are everywhere. With over 12,000 active patents ITW's products and solutions are at work all over the world, in deep-sea oil rigs, aerospace technology, bridges and wind turbines, supporting commercial buildings, healthcare, the spaces in which we live and work, the construction of those spaces, the cars we drive, and the mobile devices we rely on. We are never, whether we know it or not, more than a few steps from an innovative ITW solution.

We are committed to operational excellence and systematic new product development that helps our customers create the products and services that make our lives better.

You are never more than a few steps from an innovative ITW solution

ITW



Cullen

Since 1977 Cullen has been a brand name synonymous with innovation, quality and customer service within the building industry.

A brand synonymous with innovation, quality and customer service

Becoming a part of ITW Construction Products in 2008, Cullen has benefitted from the expertise and resources of a global corporation allowing them to grow, invent and create more than before.

Designing and manufacturing a complete range of timber engineering connectors, Cullen is at the forefront of market trends, ideas and needs.

Chosen for their highest quality and European compliance of both EN792 – 13 and Eurocode 5, our timber engineering solutions will become a mainstay of your most valued business assets.

Company Profile & Services

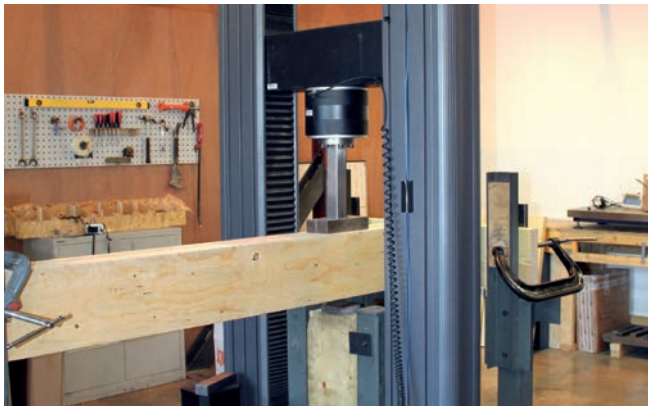
Innovation

At Cullen we follow a customer focused approach to new product development which allows us to research and interpret the true needs of our customers and their industry. Our product development begins on site, not in a lab.

Thanks to our dedicated focus on innovation, Cullen adds new products to its offering which are true problem solvers for the industry.

Product development begins on site, not in a lab

Our state of the art research facility in Glenrothes, Scotland includes a test rig, timber conditioning chamber and computer controlled turret press for prototype work.



Cullen App

The Cullen App was developed with the end user in mind showing, through detailed animations, how our products are correctly fixed in a multitude of different connection details. This App can be used by Building Inspectors, Site Managers, Construction Directors, anyone who needs to check for correct installation.

Available now for download on both Apple & Android. Check it out on Google Play and search Cullen Floor.

Qualified Technical Support

You can be confident with Cullen that you are fully supported by a highly qualified technical team.

With almost 40 years of experience, our technical experts are ready to offer advice in timber engineering related matters.

Available Monday to Friday from 8.30am – 5:00pm.

UK: 01592 777570
cullentechnical@itwcp.com

Our skilled professionals play a leading role in the industry's representative bodies finding solutions to future challenges.

Customer Support

Our dedicated team of customer service advisors are always available to take your calls.

They can assist you with:

- Processing your orders
- Providing pricing and delivery information
- Answering questions and queries
- Putting you in touch with the correct member of our organization

Available Monday to Friday from 8:30am – 5:00pm.

UK: 01592 771132
orders@itwcp.com

Get in touch with us today to see how we can assist you.

General Guidelines

Technical Information

The technical information contained in this brochure is correct at the time of updating, February 2017. ITW Construction Products reserve the right to amend, change or update the technical information without giving prior notice. For current product updates and technical information, visit our website www.itwcp.com.

The contents of this brochure and the latest product updates posted on the website supersede all previous Cullen publications including all brochures, installation guides, manuals and information sheets.

If you would like to receive technical bulletin updates and industry news, or would like to be informed of new Cullen products, please visit our website.

All safe working loads are derived from tests and are underwritten by ITW Construction Products. All characteristic values are derived from tests carried out by independent accredited test labs (unless otherwise stated). Cullen European Technical Approvals (ETA) have been submitted for approval using British Board of Agrément (BBA) as the approved notified body.

General Installation Information

- Proper product installation and construction practices must be followed at all times
- Timber members and Engineered Wood Products may split when nailed; this may reduce their safe working load/characteristic capacity
- To achieve the safe working loads/characteristic capacities published all specified nails and fastenings must be used and installed as per the instructions set out in this brochure
- Failure to follow proper nailing procedures and instructions will reduce the safe working loads/characteristic capacities
- **Only bend Cullen connectors when directed to by the appropriate Cullen installation guide, and when necessary "only bend once"**

Design Information

- The integrity of the building or structure must be validated by a suitably qualified Building Designer or Engineer (the "Designer")
- The Designer is responsible for determining that the appropriate connector and/or hanger has been selected
- Location and spacing of straps must be specified by the Designer
- When selecting the appropriate connector and/or hanger, consideration must be given to the safe working loads or characteristic capacities required, bearing support and connection details within the building or structure
- **For all Engineered Wood Products (EWP), ITW Construction Products recommends the hanger height be at least 60% of the joist height for lateral stability**
- Any bespoke Cullen product designed by ITW Construction Products but manufactured by another (unless directed to by ITW Construction Products) will not be covered under ITW Construction Product's warranty
- ITW Construction Products reserve the right to (i) change the design specifications and applications of any connector/hanger, or (ii) withdraw any connector or hanger without giving prior notice

NB. Any modification to any Cullen custom-made or manufactured connector and/or hanger product will void any warranty given by Cullen in relation to that particular connector and/or hanger product.

Galvanised Protection

Z275 galvanised coating is the minimum corrosion protection recommended for Service Class 2 applications (BS EN1995-1-1 Table 4.1 Examples of minimum specification for material protection against corrosion for fasteners).

Z600 galvanised coating gives a greater corrosion protection for use with masonry applications (BS EN845-1 Annex A1, Table A.1 Materials and corrosion protection systems)

General Guidelines

Service Classes (BS EN1995-1-1 section 2.3.1.3)

— (1) P Structures shall be assigned to one of the service classes given below.

NOTE: The service class system is mainly aimed at assigning strength values and for calculating deformations under defined environmental conditions.

NOTE: Information on the assignment of structures to service classes given in (2)P, (3)P and 4(P) may be given in the National annex.

— (2) P Service class 1 is characterised by a moisture content in the materials corresponding to a temperature of 20°C and the relative humidity of the surrounding air only exceeding 65% for a few weeks per year.

NOTE: In service class 1 the average moisture content in most softwoods will not exceed 12%.

— (3) P Service class 2 is characterised by a moisture content in the materials corresponding to a temperature of 20°C and the relative humidity of the surrounding air only exceeding 85% for a few weeks per year.

NOTE: In service class 2 the average moisture content in most softwoods will not exceed 20%.

— (4) P Service class 3 is characterised by climatic conditions leading to higher moisture contents than in service class 2.

UK National annex to BS EN1995-1-1 states the following service classes for these applications:

Type of Construction	Service Class
Cold roofs	2
Warm roofs	1
Intermediate floors	1
Ground floors	2
Timber-frame walls, internal and party walls	1
Timber-frame walls, external walls	2
External uses where member is protected from direct wetting	2
External uses, fully exposed	3

Fixings For Cullen Connectors

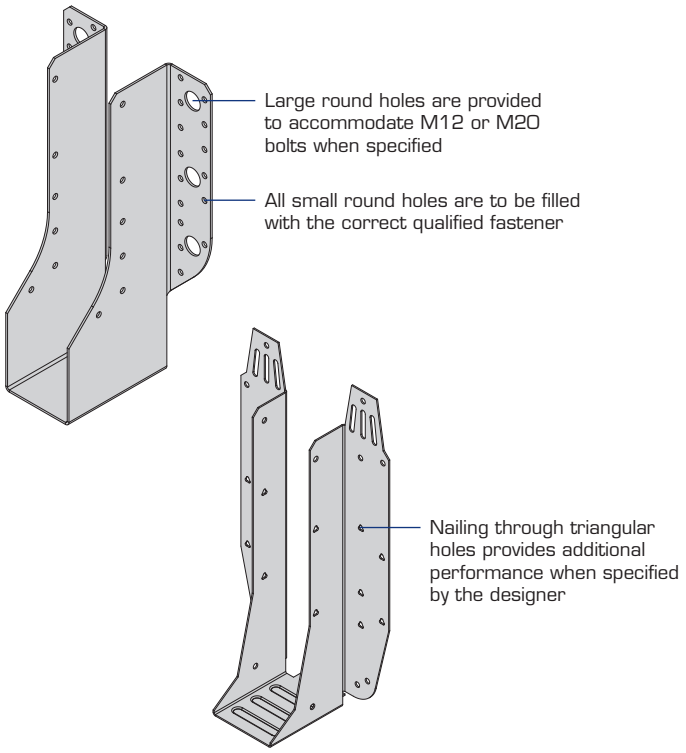
Fixings for Cullen

This section sets out to simplify the specification of ITW Construction Products fasteners and fastening systems for use with Cullen timber engineered connectors. These fasteners have been tested in conjunction with the Cullen connectors, meaning that **published design values are underwritten by ITW Construction Products** if used together.

Fastening Cullen Connectors

To achieve the safe working loads / characteristic capacities published in this Cullen Technical Guide and specified by roof truss or floor joist design software, connectors must be installed using the correct number and type of fasteners.

The fasteners in this section have been assessed and qualified as suitable for use with Cullen connectors. **All published values are underwritten by ITW Construction Products**. Using an unqualified or alternative fastener could result in a reduced connector capacity and the design values not being underwritten.



PASLODE GAS POSITIVE PLACEMENT NAILER

Product Code	Description
014095	PPN35Ci Li-ion Gas Positive Placement Nailer

Paslode PPN35Ci Li-ion Gas Positive Placement Nailer

Drives ETA approved, CE compliant hardened twist nails through connectors and hangers into solid wood beams.

ETA - 09/0273

Nail Specification

Product Code:	141189	141185
Box Qty:	1,250	2,500
Shank Type:	Square Twist Hardened	
Shank Diameter:	3.4mm	
Length:	35mm	
Head Diameter:	7.0mm	
Average Profile Diameter:	3.7mm	
Finish:	12µm Electro Galv	

PASLODE PNEUMATIC POSITIVE PLACEMENT NAILER

Product Code	Description
500855	F250S PP Pneumatic Positive Placement Nailer

Paslode F250S PP Pneumatic Positive Placement Nailer

Drives ETA approved, CE compliant hardened twist nails through connectors and hangers into solid wood beams.

ETA - 09/0273

Nail Specification

Product Code:	140588
Box Qty:	3,000
Shank Type:	Square Twist Hardened
Shank Diameter:	3.4mm
Length:	35mm
Head Diameter:	7.0mm
Average Profile Diameter:	3.7mm
Finish:	12µm Electro Galv

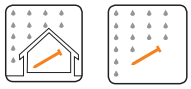
Fixings For Cullen Connectors

LOOSE FASTENERS

3.4 x 35mm Electrogalvanised Square Twist Nails

Product Code:	547389
Box Qty:	500
Shank Type:	Square Twist
Shank Diameter:	3.4mm
Length:	35mm
Head Diameter:	8.0mm
Average Profile Diameter:	3.7mm
Finish:	12µm Electro Galv

Pozidrive S/Steel and TX20 Galvanised Screws



Eurocode Service Class 1 | Eurocode Service Class 3

Product Code:	114386	150314
Box Qty:	200	200
Shank Type:	Sscrew Thread	Sscrew Thread
Shank Diameter:	3.0mm	3.0mm
Length:	25mm	25mm
Head Diameter:	9.5mm	9.5mm
Average Profile Diameter:	5.0mm	5.0mm
Finish:	Stainless Steel A2	5µm Electro Galv

3.35 x 50mm Stainless Steel Annular Ring Shank Nails

Product Code:	547297
Box Qty:	250
Shank Type:	Ring Shank
Shank Diameter:	3.35mm
Length:	50mm
Head Diameter:	-
Average Profile Diameter:	-
Finish:	Stainless Steel

Paslode Structural Timber Screws

CE
EN 4592

Product Code:	See page 94	See page 94
Box Qty:	100	100
Outer Thread Shank Diameter:	6.5mm	8.0mm
Plain Shank Diameter:	4.8mm	5.85mm
Length:	35 - 250mm	65 - 135mm
Head Diameter:	11.5mm	16mm
Finish:	5µm Electro Galv	5µm Electro Galv

SPIT POWDER ACTUATED TOOL SYSTEM

CE

Product Code	Description
011071	P370 Powder Actuated Tool with Magazine (includes Single Shot Adaptor)

SPIT P370 Cordless Powder Actuated Tool

For fixing to steel of thickness 5mm to 10mm.

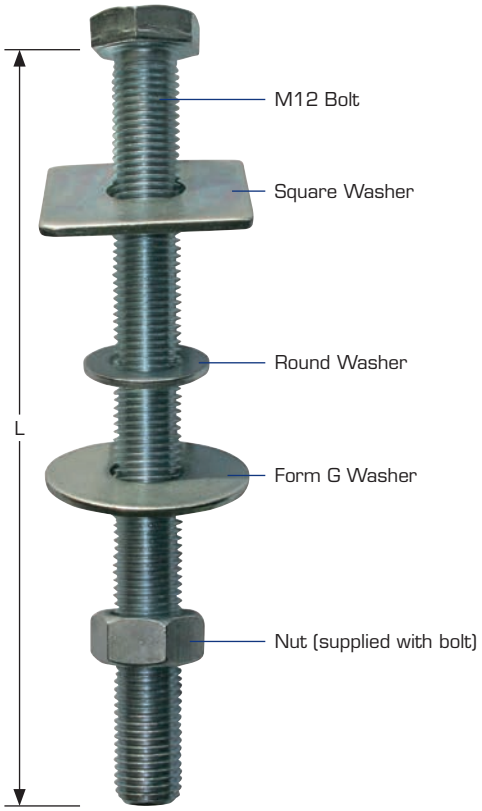
SC9 Collated Drive Pins

Product Code:	011340
Box Qty:	500
Shank Type:	Drive Pin
Shank Diameter:	4mm
Length:	15mm
Head Diameter:	9.0mm
Average Profile Diameter:	-
Finish:	7µm Electro Galv

Fixings For Cullen Connectors

BOLTS

M12 BOLT



M12 Bolt General Specification

Shank Type:	Threaded
Shank Diameter:	M12
Head Diameter A/F:	19.0mm
Head Thickness:	7.5mm
Grade:	8.8
Finish:	>5µm Electro Galv

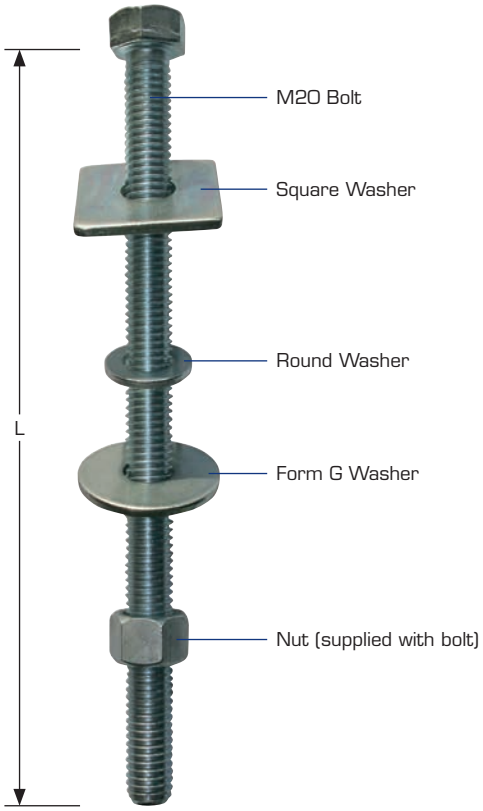
M12 Bolt Lengths

Product Code	Bolt Length (L) (mm)	Description
M-12-130-HRH-FULL-THREAD	130	M12 x 130mm HRH Bolt (full thread to suit 100 - 130mm bolt length) & Nut
M-12-180-HRH-FULL-THREAD	180	M12 x 180mm HRH Bolt (full thread to suit 140 - 180mm bolt length) & Nut
M-12-240-HRH-FULL-THREAD	240	M12 x 240mm HRH Bolt (full thread to suit 200 - 240mm bolt length) & Nut
M-12-300-HRH-FULL-THREAD	300	M12 x 300mm HRH Bolt (full thread to suit 260 - 300mm bolt length) & Nut

M12 Nuts & Washers

Product Code	Diameter / Length (mm)	Thickness (mm)	Description
M-12-SQUARE	50 x 50	3.0	M12 Square Washer
M-12-ROUND	24	2.5	M12 Round Washer
M-12-FORM-G	36	3.0	M12 Form G Washer
M-12-NUT	19 A/F	10.0	M12 Nut

M20 BOLT



M20 Bolt General Specification

Shank Type:	Threaded
Shank Diameter:	M20
Head Diameter A/F:	30.0mm
Head Thickness:	12.5mm
Grade:	8.8
Finish:	>5µm Electro Galv

M20 Bolt Lengths

Product Code	Bolt Length (L) (mm)	Description
M-20-130-HRH-FULL-THREAD	130	M20 x 130mm HRH Bolt (full thread to suit 100 - 130mm bolt length) & Nut
M-20-180-HRH-FULL-THREAD	180	M20 x 180mm HRH Bolt (full thread to suit 140 - 180mm bolt length) & Nut
M-20-240-HRH-FULL-THREAD	240	M20 x 240mm HRH Bolt (full thread to suit 200 - 240mm bolt length) & Nut

M20 Nuts & Washers

Product Code	Diameter / Length (mm)	Thickness (mm)	Description
M-20-SQUARE	50 x 50	3.0	M20 Square Washer
M-20-ROUND	36	2.5	M20 Round Washer
M-20-FORM-G	60	5.0	M20 Form G Washer
M-20-NUT	30 A/F	16.0	M20 Nut

Eurocode 5

Eurocode 5 (BS EN1995-1-1)

Presently timber designs in the UK can be carried out using national standards BS 5268 part 2 & 3 or using BS EN1995-1-1 (Eurocode 5).

Eurocode 5 is the harmonised European Standard covering the design of timber structures.

The purpose of the Eurocodes is to establish a common set of standards for the design of buildings across all European member states, although each member can have its own National Annex which is used in conjunction with the Eurocodes for design.

Technical Approvals

All timber-to-timber hangers are tested to meet the requirements of ETAG 015 Guideline for European Technical Approval of three-dimensional nailing plates, which allows the hangers to be submitted for a European Technical Assessment which once issued enables the products to be CE Marked.

All timber-to-masonry products (hangers, straps and wall ties) are tested to meet the requirements of BS EN845-1 enabling them to be CE marked.

Fasteners for timber structures (nails, screw and bolts) are tested to meet the requirements of BS EN14592 enabling them to be CE marked.

Load Tables

Presently in the UK timber design can be carried out to BS 5268-2:2006 which is based on permissible stress design, or BS EN1995-1-1:2004+A1:2014 (EC5) which is based on limit state design. The following brochure pages will state two different sets of values:

- Safe Workings Loads – permissible values calculated to BS 5268-2:2002 and have factors of safety applied to them e.g. Long Term-2.4, Medium Term-2.1 and Short Term-2.0
- Characteristic capacity of hanger is based on ultimate limit states and is unfactored

What does this mean for our products?

In addition to publishing safe working loads that have already been factored down, characteristic values for each product will be published. The characteristic value is the lower 5th percentile value obtained from test results.

A series of modification factors must be applied to the characteristic value to determine the Design Value.

Timber to Timber Connectors

Design Value = $(F_k \times K_{mod}) / Y_m$

F_k = Characteristic value

K_{mod} = Modification factor for duration of load and moisture content (EN1995-1-1 table 3.1)

Y_m = Partial factors for material properties and resistance (1.3 for connections – EN1995-1-1 table 2.3)

Timber to Masonry Connectors

Design Value = F_k / Y_m

F_k = Characteristic value

Y_m = Partial factors for material properties and resistance (1.5 for masonry – EN845-1)

JHI

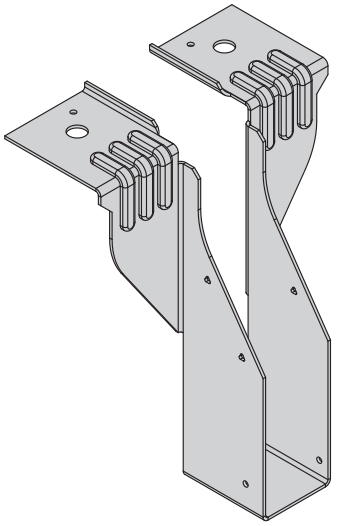
Masonry Joist Hanger

European Community Registered Design



The JHI hanger is a traditional timber to masonry hanger range designed for use with I-Joists, open web & solid timber joists/trusses.

Features & Benefits

- The same air leakage values of a wall with no protrusions, forming a major contribution towards Part L1 Building Regulations
- Approved and tested for use with H&H Thin Joint System (Contact Technical for approved installation guide)

Material Specification

- Galvanised mild steel - Z600

Fixings

Fixings required into incoming member only. No fixings required into masonry.

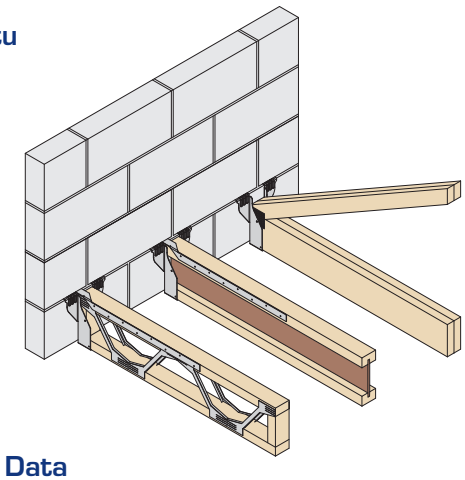
Masonry Joist Hanger

In Situ



- Suitable for use with Open Web Joists, I-Joists and trusses
- Floor can be propped with acroprops and fully decked but must not be fully loaded until the masonry above has fully cured

- A minimum of **3 courses (675mm)** of masonry above is required for hanger to achieve loads stated
- The masonry above must be fully cured for **28 days** prior to loading the floor
- All hangers in this range do not provide restraint, therefore restraint straps may be required for joist applications (see pages 130 - 131)

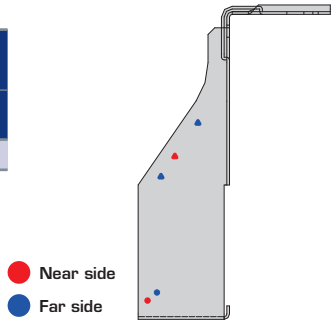
Enhanced Uplift

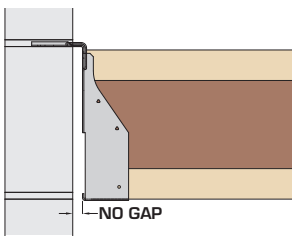
- Fixings into the incoming joist/truss are required to resist uplift
- Increased uplift figures can be achieved by nailing the additional triangular nail holes into the incoming member
- Web stiffeners required for I-Joists, 2No end blocks required for Open Web Joists & minimum bottom chord depth/vertical required for trusses

Fixings (3.4 x 35mm)	Safe Working Loads (kN)			Characteristic Capacity (kN)
Incoming	Uplift - Short Term	Uplift - Medium Term	Uplift - Long Term	Uplift
5	2.25	2.14	1.87	4.50

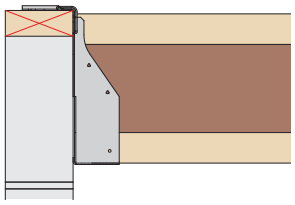


Hanger Depth (mm)	Min Timber Depth (mm)
150	84
175 - 195	122
225 - 240	172
250	195
300	235
350	300
400	350

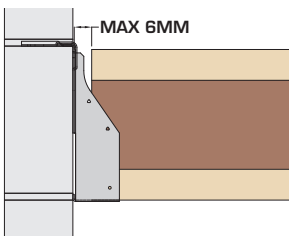
Incorrect Installation



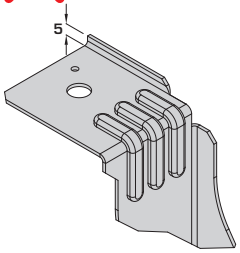
Do not install the hanger with a gap between the hanger and the face of the block work.



Do not install the hanger onto a timber wall plate.



Do not install the hanger with a gap exceeding 6mm between the joist/ truss and the hanger.

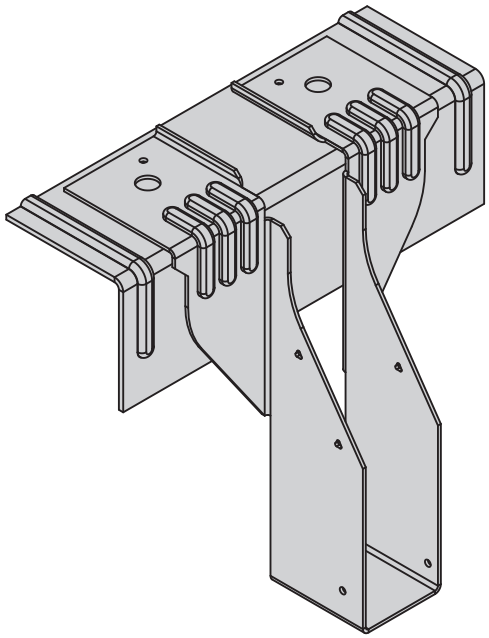


Do not flatten the 5mm upstands on the hanger top flanges. These are critical to the performance.

RB-JHI

Rapid Build Masonry Joist Hanger

CE



The RB-JHI hanger is a timber to masonry hanger range designed for use with I-Joists, open web & solid timber joists/trusses. The RB-JHI combines the standard JHI hanger with a reinforced top plate to provide a superior level of performance.

Features & Benefits

- The addition of the reinforced top plate keeps the hanger in position eliminating the need for masonry above (unless required for futher additional performance)
- Supporting block work only needs to cure for 3 days instead of the standard 28 days for traditional masonry hangers, speeding up the build process
- A major contribution to compliance with air leakage - Part L1Building Regulations

Material Specification

- Galvanised mild steel - Z600

Fixings

Fixings required into incoming member only. No fixings required into masonry.

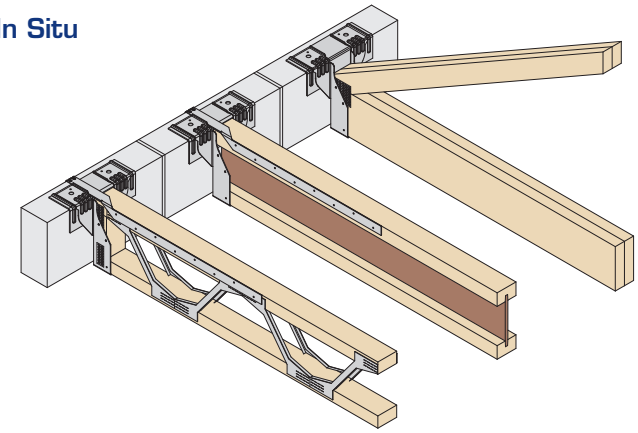
RB-JHI

Rapid Build Masonry Joist Hanger

In Situ



- Suitable for use with Open Web Joists, I-Joists and trusses
- Non return hangers are suitable with no masonry above. Return only required for increased load capacity

- **No masonry** is required above the hanger (unless stated for increased load capacity).
- The masonry supporting the hanger must be cured for **3 days** prior to loading the floor.
- The RB-JHI/RB-JHIR does not provide restraint, therefore restraint straps may be required (see pages 130 - 131)

Load Data

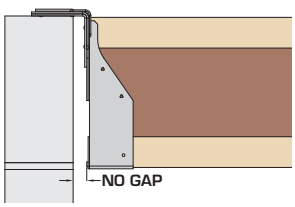
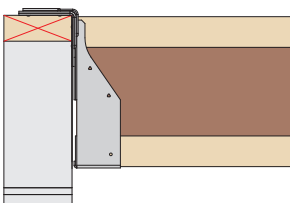
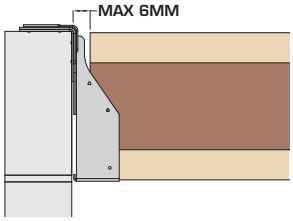
Incorrect Installation



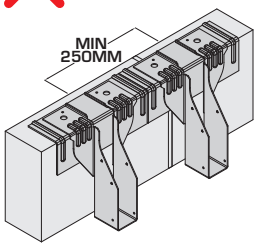
Do not install the hanger with a gap between the hanger and the face of the block work.



Do not install the hanger onto a timber wall plate.



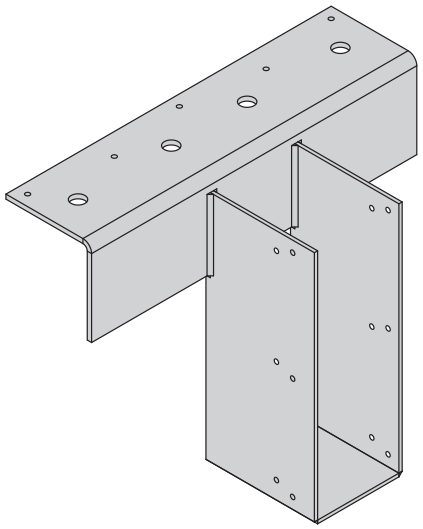
Do not install the hanger with a gap exceeding 6mm between the joist/ truss and the hanger.



Do not cut/modify the top flanges. These are critical to the performance.

FMHI

Flexible Masonry Hanger



FMHI - 4mm top plate, 3mm stirrup, 100mm bearing
FTHI - 4mm top plate, 4mm stirrup, 150mm bearing

The FMHI hanger is used to support joists and trusses from masonry walls in high load situations with 675mm masonry above.

Features & Benefits

- Increased top flange to allow for greater load distribution
- Options available for skewed, offset, dropped and straddle connections

Material Specification

- 4mm top plate & 3mm stirrup - mild steel with zinc phosphate undercoat and an organic bituminous top coat to BS EN845-1:2013+A1:2016

Fixings

Fixings required into incoming member only.

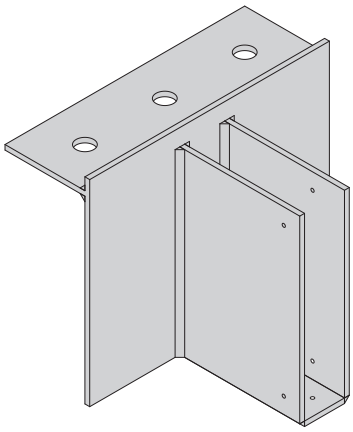
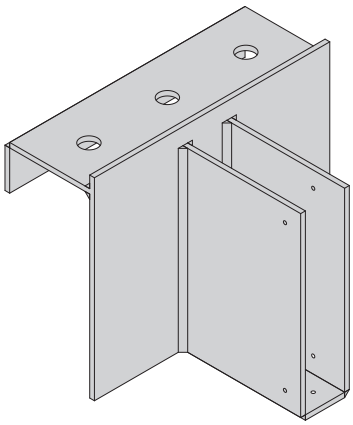
M-STD/M-RTN

Very High Load Masonry Hanger



MASONRY-STD



MASONRY-RTN

The Masonry Standard and Masonry Return hangers are used to support joists and trusses from masonry walls in very high load situations.

Features & Benefits

- Partial penetration butt welds allow for greater performance over FMHI hanger
- Available in 2 thickness options to accommodate higher loads
- Return option available to keep hanger tight to masonry wall

Material Specification

- 6mm & 8mm mild steel with zinc phosphate undercoat and an organic bituminous top coat to BS EN845-1:2013+A1:2016

Fixings

Fixings required into incoming member only. No fixings required into masonry.

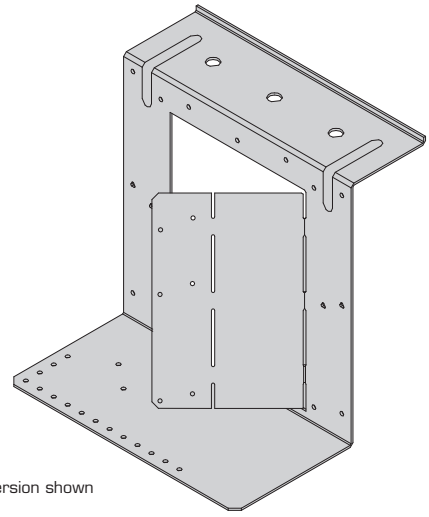
***Minimum 675mm masonry required above to achieve uplift capacity.

VSM

Variable Skew Masonry Hanger



Right Hand version shown

The VSM hanger is used to support joists and trusses up to 97mm wide from masonry walls in skewed applications between 30 - 90°.

Features & Benefits

- Unique hanger design provides a variable skew angle between 30 - 90°
- No need to mitre cut joists
- Angle scale on base to ease adjustment

Material Specification

- Galvanised mild steel - Z600

Fixings

Fixings required into incoming member only. No fixings required into masonry.

Code	Description	Box Qty
547389	3.4 x 35mm Square Twist Nails - LOOSE	500
141185	3.4 x 35mm Square Twist Nails - COLLATED*	2,500

*For use with Paslode PPN35Ci

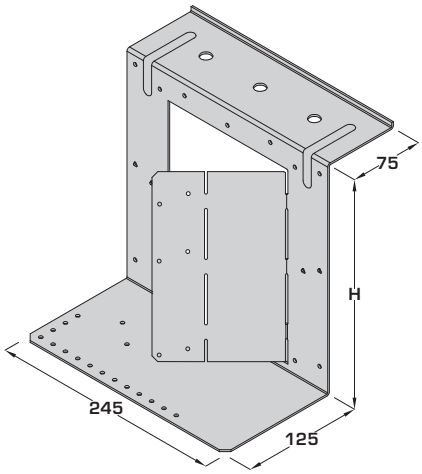
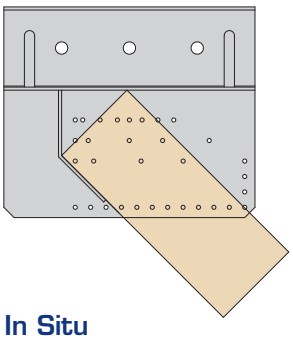
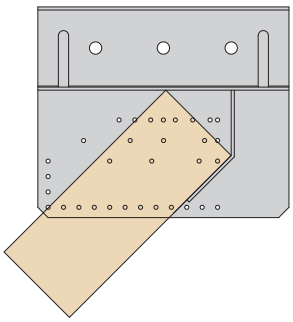
Dimensions (mm)



Left Hand



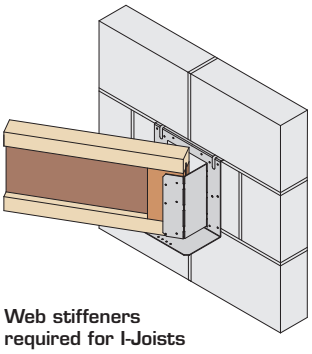
Right Hand



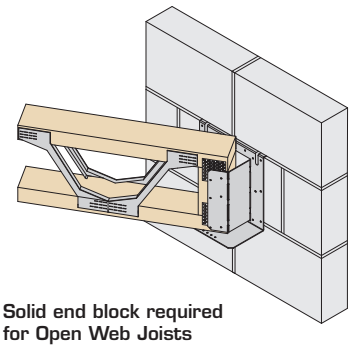
In Situ

- Suitable for use with Open Web Joists, I-Joists and trusses.
- Floor can be propped with acroprops and fully decked but must not be fully loaded until the masonry above has fully cured.

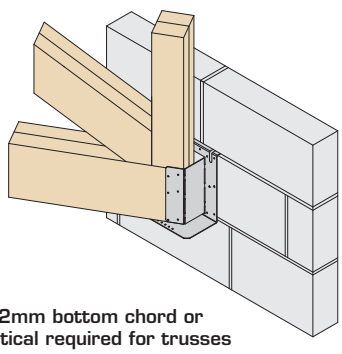
- A minimum of **3 courses (675mm)** of masonry above is required for hanger to achieve loads stated.
- The masonry above must be fully cured for **28 days** prior to loading the floor.



Web stiffeners required for I-Joists



Solid end block required for Open Web Joists



222mm bottom chord or vertical required for trusses

Plates and additional block work have been omitted for clarity

VSM

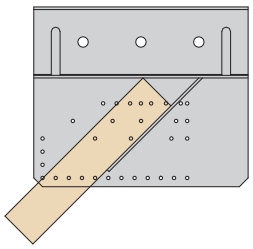
Installation Instructions

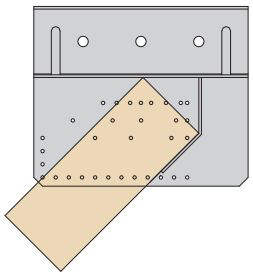
STAGE 1

Adjust side plate to approximate angle between 30° and 90° using scale on base of hanger, bending only once. Refer to the angle table below to determine if one or two bends are required.

Single Bend



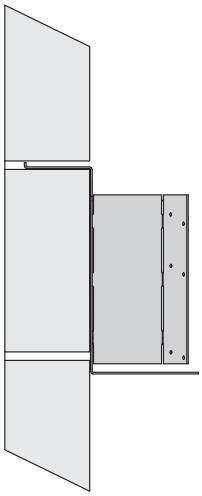
Double Bend

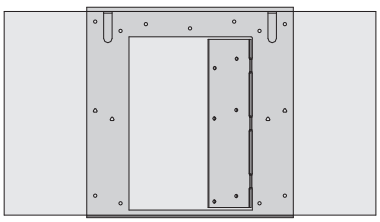


Joist Width (mm)	Single bend	Double Bend
35	n/a	30-90°
38	n/a	30-90°
44	n/a	30-90°
45	n/a	30-90°
47	n/a	30-90°
51	30-32°	>32-90°
53	30-32°	>32-90°
58	30-34°	>34-90°
59	30-34°	>34-90°
60	30-34°	>35-90°
63	30-37°	>37-90°
70	30-39°	>39-90°
72	30-40°	>40-90°
76	30-42°	>42-90°
88	30-46°	>46-90°
89	30-46°	>46-90°
90	30-46°	>46-90°
94	30-48°	>48-90°
97	30-49°	>49-90°

STAGE 2

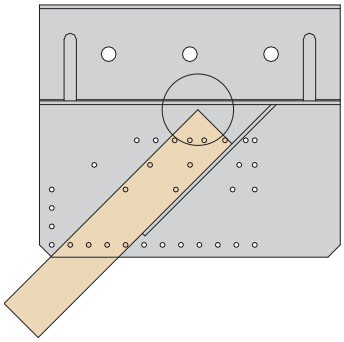
Position VSM flush against masonry.

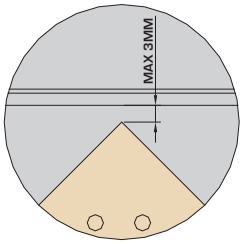




STAGE 3

Locate incoming member and adjust side plate to correct angle, ensuring maximum gap between incoming joist and back plate is no greater than 3mm.

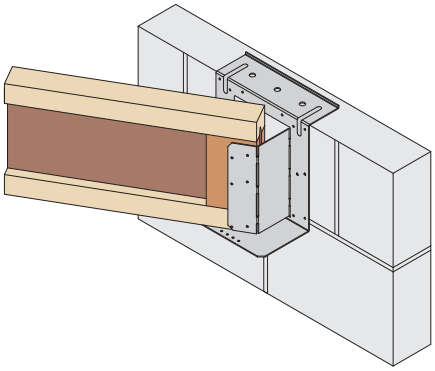




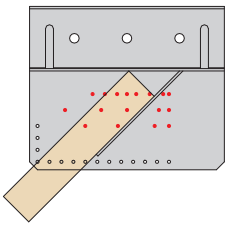
Max - 3mm gap at any given time

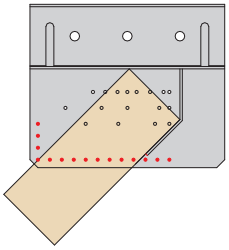
STAGE 4

Fix to incoming member using 6No 3.4 x 35mm square twist nails. Where incoming member is an I-joist, web stiffeners must be fixed as per I-joist manufacturer's guidelines.



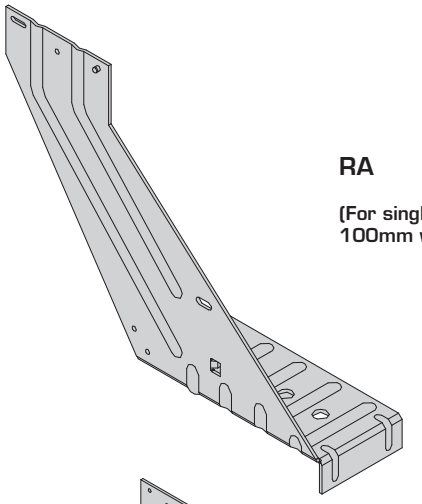
Ensure that 1No inner nail hole (indicated in red) and 1No outer nail hole (indicated in red) are filled on the underside with a 3.4 x 35mm square twist nail.





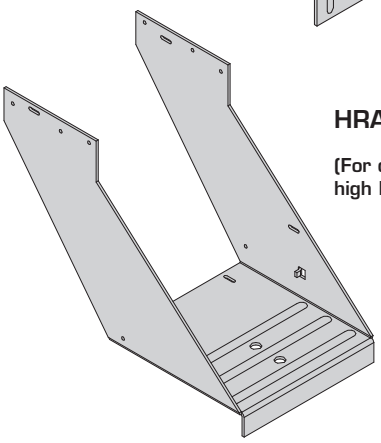
RA RANGE

Restraint Angle Range



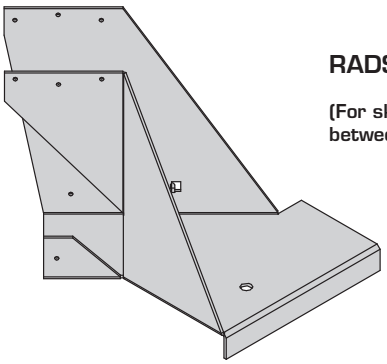
RA

(For single joists up to 100mm wide)



HRAD

(For double joists & high loads)



RADS

(For skewed applications between 30 - 87.5°)

The RA hanger range comprises of 3 hangers to suit all applications: the RA, HRAD and RADS. This is a timber to masonry hanger range designed for use with I-Joists, Open Web Joists, LVL & Glulam. The hangers provide lateral restraint(1) and require no masonry above to perform to their full capacity.

Features & Benefits

- Provides lateral restraint ((1)equivalent to restraint straps at 2m centres. Additional straps required for buildings over 3 storeys or openings greater than 600mm)
- No coursing option required as RA range supports joists on top of previous block course, allowing joist to be built in at one end without adjustment
- Supporting block work only needs to cure for 3 days instead of the standard 28 days for traditional masonry hangers, speeding up the build process

Material Specification

- Galvanised mild steel - Z600

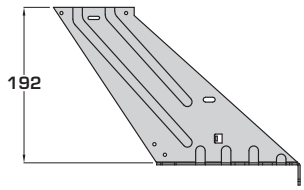
Fixings

Fixings required into incoming member only. No fixings required into masonry.

Code	Description	Box Qty
547389	3.4 x 35mm Square Twist Nails - LOOSE	500
141185	3.4 x 35mm Square Twist Nails - COLLATED*	2,500

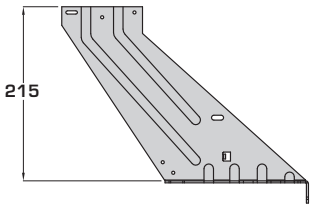
*For use with Paslode PPN35Ci

Height Suitability**



RA-195

(To suit 195 - 200 deep I-Joists)
(To suit 195 - 200 deep Open Web Joists)



RA-220

(To suit 220 deep I-Joists)
(To suit 219 - 225 deep Open Web Joists)

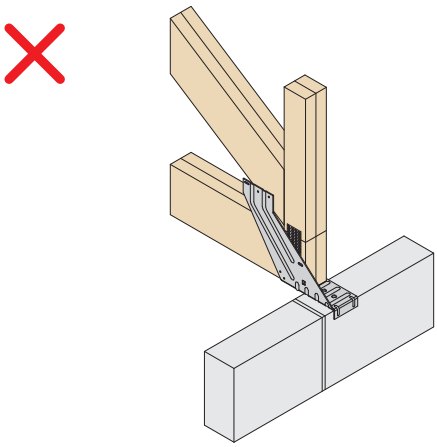
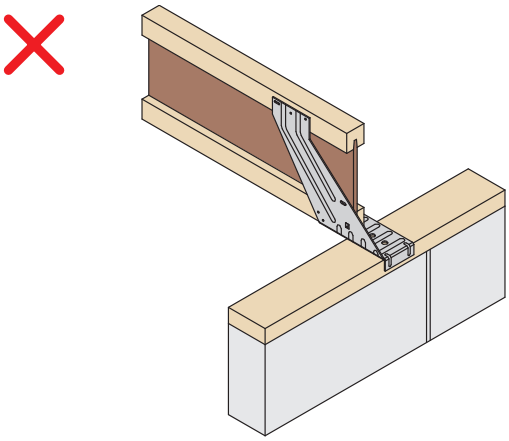
Incorrect Installation



Do not use the RA range with trussed rafters.



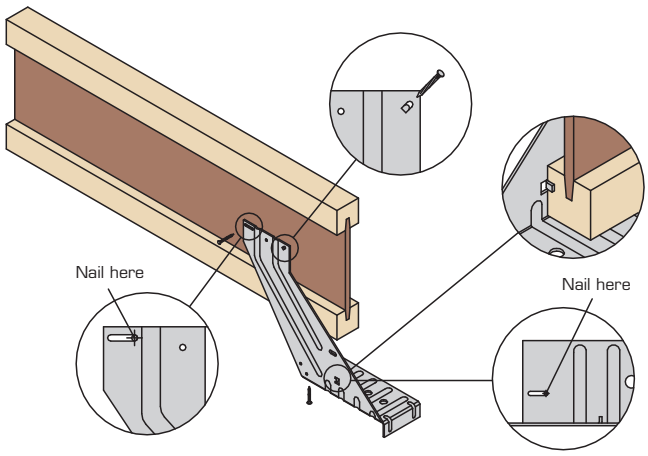
Do not install the RA range onto a timber wall plate.

RA RANGE

Restraint Angle Range

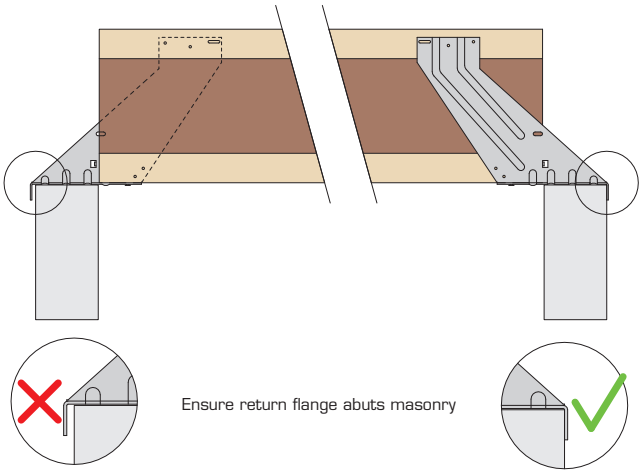
Installation Instructions

STAGE 1 - INSTALLATION



- Ensure joists just fit between the walls
- If using I-joists and they are too long, trim to fit
- Position joist against location tab
- Pre-fix RA to each end of pre-cut joist, nailing through slotted holes in base plate and side flange only, as shown
- Slide to opposite side of slots to provide full 6mm adjustment on wall head
- Always pre-fix hangers at ground level or on scaffolding

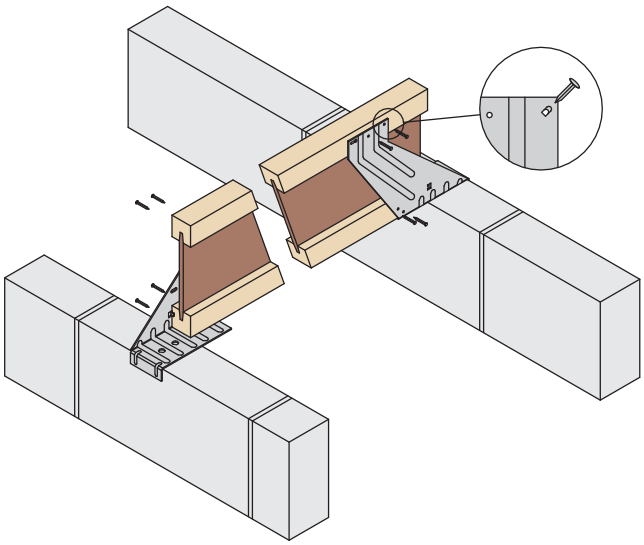
STAGE 2 - ADJUSTMENT



- Locate assembled joist on wall head allowing equal adjustment at both ends
- Adjust each end by tapping with a hammer until return flange is correctly positioned tight against blockwork
- This stage provides a maximum horizontal adjustment of 12mm and suits blockwork built to BS5606:1990 Accuracy in Building

Ensure return flange abuts masonry

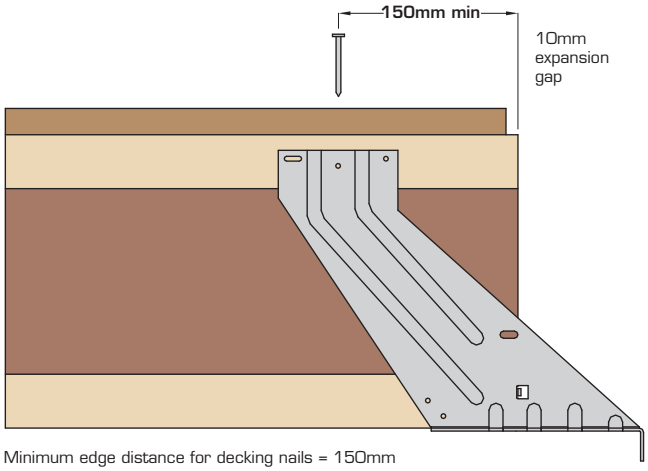
STAGE 3 - FINAL ADJUSTMENT



- Fully nail using 3.4 x 35mm square twist nails

DO NOT apply any load to joist prior to RA being fully nailed

DECKING INSTALLATION FOR FLOORS

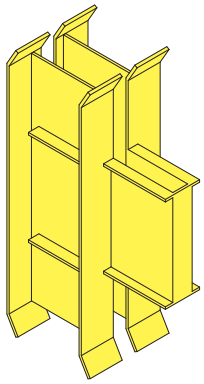


Minimum edge distance for decking nails = 150mm

HV-GR

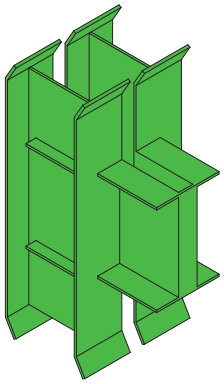
Hi-Vis Gripper

Patent Pending



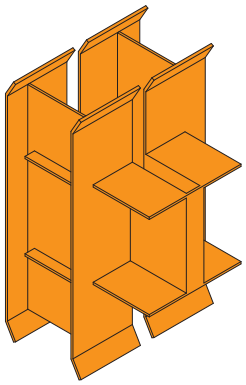
HV-GR-1

38 - 53MM WIDE



HV-GR-2

58 - 72MM WIDE



HV-GR-3

89 - 97MM WIDE

The Hi-Vis Gripper is a build-in detail for I-joists into masonry providing an air-tight seal at joist end. The Hi-Vis Gripper can be used on both external and party walls.

Features & Benefits

- Range of striking colours and unique design enables high visibility for post installation inspection
- Bend and push fit with no mortar to front face speeds up install
- Easy to install - no nailing required or need to trim joists to fit, saving time on site
- Mastic not required to seal I-Joist perimeter, reducing site costs
- Suitable for joists with either 90 or 100mm bearing without protruding into cavity
- A major contribution to compliance with air leakage

Build-in Detail Advantages

(Requiring external mortar sealing only)

- In line with existing building practice
- Easy access
- Quick and effective
- Visual quality check from outside

Approvals

- Meets NHBC technical requirements
- Part E: Compliant with the requirements of Appendix A of the Robust Details Part E Handbook
- Assessed to BS ISO-TR12470:1998 for 60 minute fire requirements

Material Specification

- High density Polyethylene

Additional parallel and perpendicular restraint may be required. Please refer to pages 130 - 131 for further guidance on built in restraint.

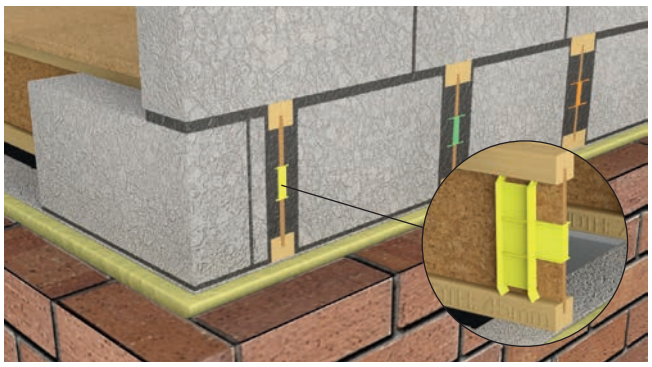
HV-GR

Hi-Vis Gripper

External Wall Application

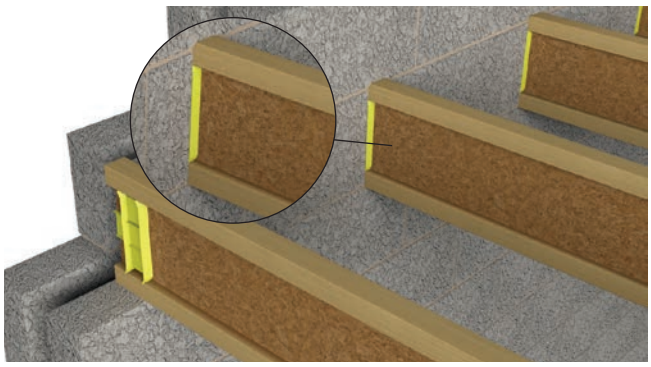
Install the I-Joists onto the masonry at required centres ensuring that they each have a minimum bearing onto the masonry of 90mm.



Mortar cavity side to achieve air tightness performance.

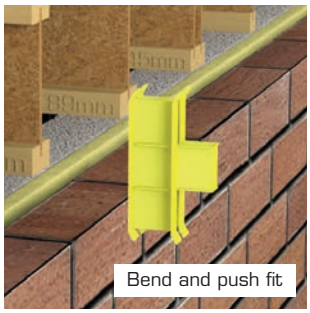
Party Wall Application

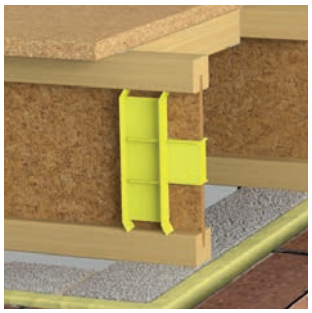
Install the I-Joists onto the masonry at required centres ensuring that they each have a minimum bearing onto the masonry of 90mm.



Mortar cavity side to achieve 60 minute Fire Rating and air tightness performance.

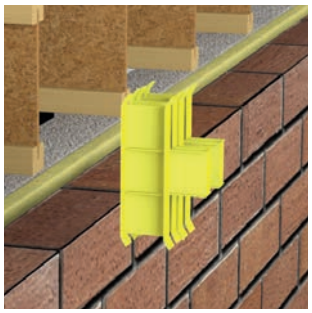
Single Ply



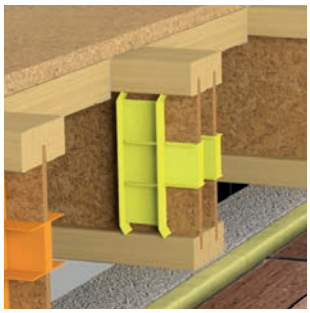


Place the Hi-Vis Gripper onto one end of the I-Joist to be built into the masonry. Push fit until it is fully engaged. Ensure it tightly abuts the I-Joist web and that both ends of the Hi-Vis Gripper tightly abut the I-Joist flanges.

Double Ply



Second Hi-Vis Gripper abuts first to provide an air tight seal.

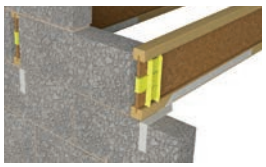


Installation of the Hi-Vis Gripper is now complete.

Double I-Joists must be securely joined with I-Clips.

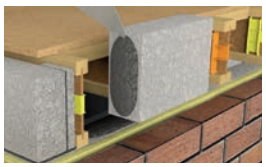
Installation Instructions

STAGE 1



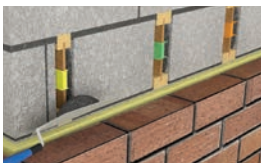
Install joists and deck as per manufacturer's instructions. Select the correct Hi-Vis Gripper to suit joist width, fold on its easy fold hinges and push onto the end of the joist, no additional fixing required.

STAGE 2



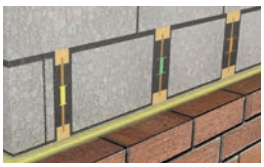
Lay mortar bed between joists, add mortar to perp end of block. Install block between joists tight to face of Hi-Vis Gripper.

STAGE 3



Add mortar to void created between block, joist and Hi-Vis Gripper and flush up.

STAGE 4



Ends of joist can be inspected to ensure correct installation before external brickwork built up.

STAGE 5

No mortar or mastic required to internal face. Hi-Vis Grippers visible for post installation inspection prior to plasterboard being installed.

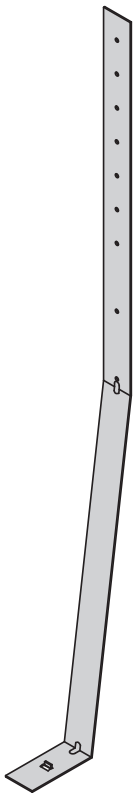
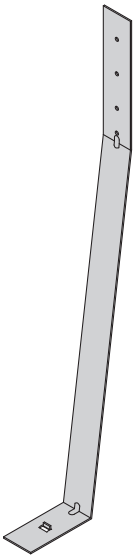
Timber Frame Holding Down Strap



ST-PFS-50-100



ST-PFS-50-100–M

The ST-PFS and ST-PFS-M stainless steel straps are an engineered solution to restrain timber structures against uplift when using either timber joists, engineered joists or concrete ground floors.

Features & Benefits

- Unique design allows one part to accommodate cavities between 50 - 100mm wide
- Provides unparalleled performance in restraint against uplift to timber frame structures
- Centrally positioned holes minimising any nail slippage or timber splitting

Material Specification

- Austenitic stainless steel

Approvals

- Meets NHBC & Homebond technical requirements

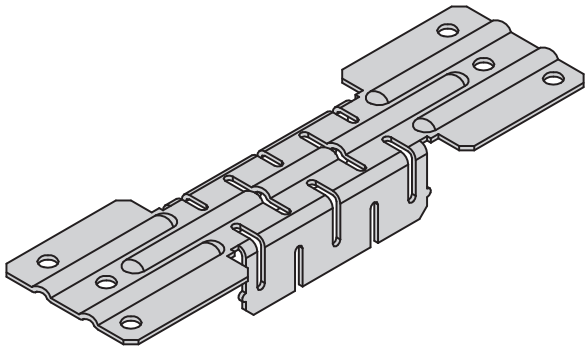
AWS

Acoustic Wall Strap

GB Patent: 2448765

ETA - 13/0343



The AWS wall straps are used to connect separating walls in attached dwellings.

Features & Benefits

- Special design allows for greater strength and acoustic properties over standard straps
- Ensures correct cavity width, eliminating site errors
- Increased compression and tension strength enabling greater transfer of wind loadings
- Unique slotted profile reduces sound transmission

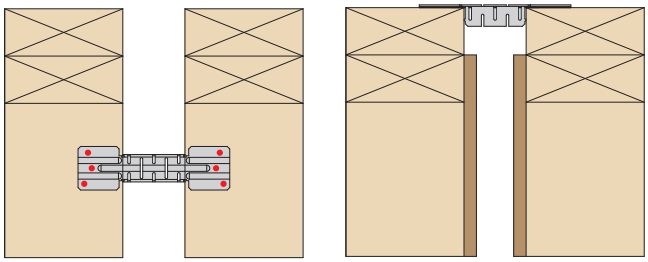
Material Specification

- Galvanised mild steel - Z275

Approvals

- Compliant with Part E (England & Wales) - Part E & Approved Document E
- Compliant with Part E (Ireland)
- Compliant with E-WT-1 & E-WT-2 (Robust Details) for separating wall straps
- Compliant with Building Standards Scotland - Section 5 (Noise)
- Compliant with Regulation G2 Northern Ireland - DOE Technical Booklet G

In Situ



E-WT-1
(timber frame cavity wall without sheathing)

AWS fixed to face of panel.

Straps at 1200mm (min) centres horizontally, one row of ties per storey height vertically.

To be positioned near top of panel.

E-WT-2
(timber frame cavity wall with sheathing)

AWS fixed to top rail.

Straps at 1200mm (min) centres horizontally, one row of ties per storey height vertically.

When levels change straps should be fixed to the face of the panel.

*For use with Paslode PPN35Ci

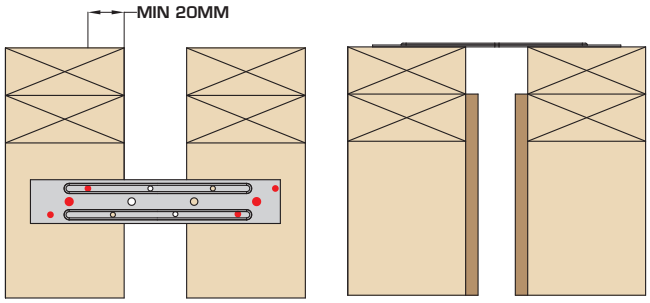
In Situ



E-WT-1
(timber frame cavity wall without sheathing)

PWS fixed to face of panel.

Straps at 1200mm (min) centres horizontally, one row of ties per storey height vertically.

To be positioned near top of panel.

Nails to have minimum 20mm edge distance.

E-WT-2
(timber frame cavity wall with sheathing)

PWS fixed to top rail.

Straps at 1200mm (min) centres horizontally, one row of ties per storey height vertically.

When levels change straps should be fixed to the face of the panel.

Nails to have minimum 20mm edge distance.

Dimensions (mm)

PWS-240	240	76 - 100	6	1.20	1.70

PSTS

Open Panel Connection (8mm)

EN 4592

The Paslode Structural Screws are specifically designed for the UK Construction market. The 8mm diameter screws can quickly and easily join timber frame panels together.

Features & Benefits

- Draws panels tightly together to maximise strength and minimise air leakage
- Higher lateral load capacity than nails or conventional screws
- Suitable for Service Class 2

Available Sizes For Application

Code	Reference	Description	Box Qty
551110	PSTS8.0x65	Structural Timber Screw 8.0 x 65mm Hex Head	100
551103	PSTS8.0x85	Structural Timber Screw 8.0 x 85mm Hex Head	100

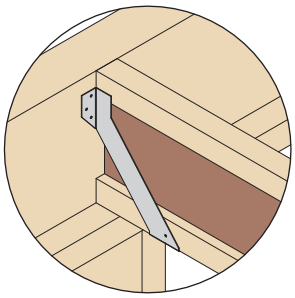
Disproportionate Collapse

Product Overview

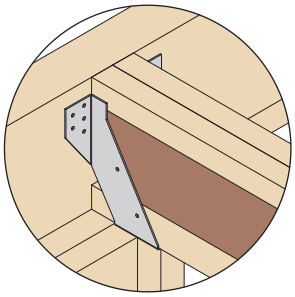
The RD-Range was developed for joist to rim beam connections. The design concept is that the floors are constructed as normal with the joists bearing onto the wall panel and the RD-DCR is then fixed into position to restrain the joist. In the event of a disproportionate collapse situation arising (fire, explosion etc) the RD-DCR will act as a hanger to transfer the floor load to the rim beam which will have been designed to carry this load across the length of the panels.

The disproportionate collapse restraint system (RD range) is a multi-compliant solution that meets:

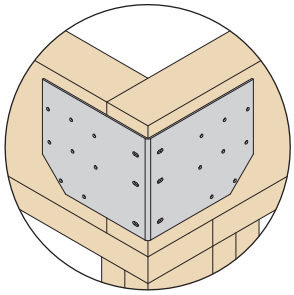
- Part A: Compliant with Disproportionate Collapse requirements for 5 storeys or more
- Part E: Compliant with Robust Details (E-FT-1 and E-FT-2) for timber frame structural junctions between timber separating floors and external walls
- Part E: Assisting towards compliance for Approved Document E performance requirements
- Corner bracket system makes a minor contribution to compliance with air leakage
- Building Standards (Scotland) - Section 1.2 (Structure) and 5.1 (Noise)



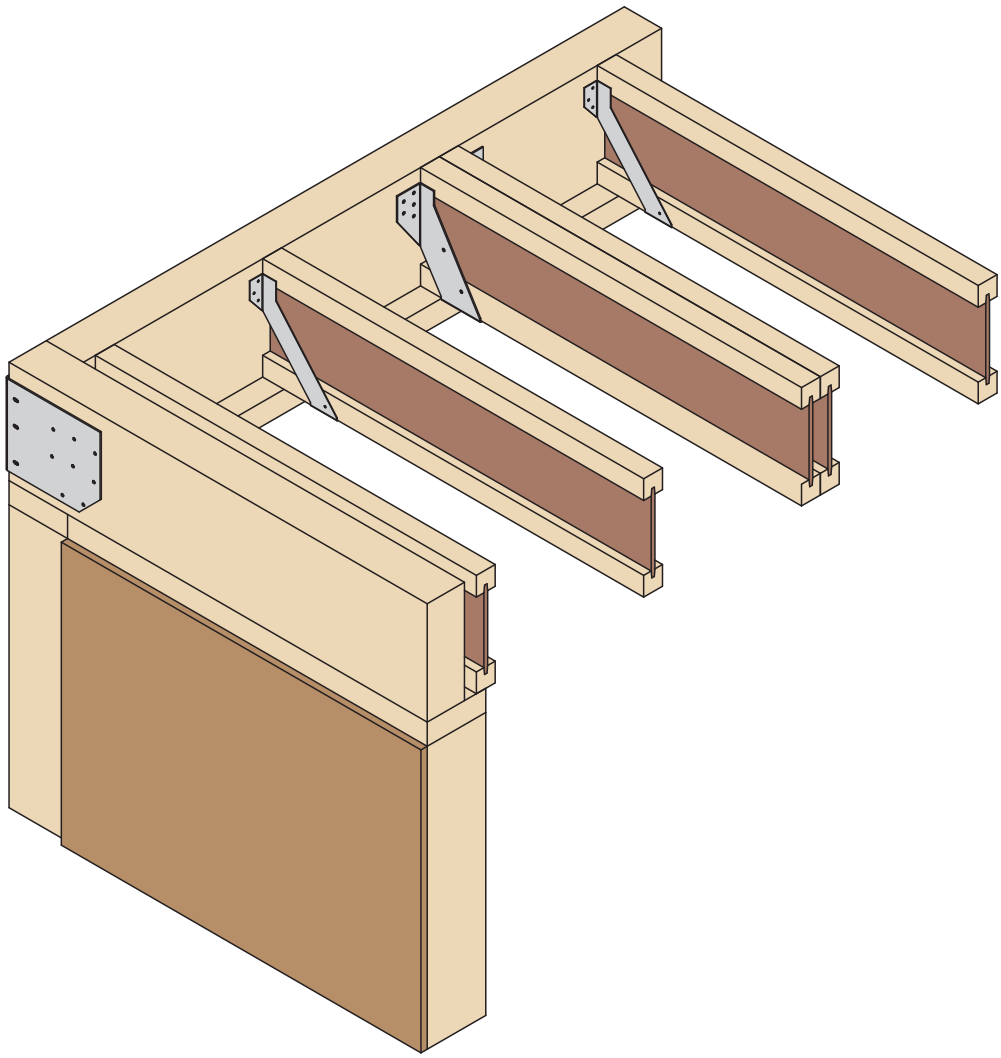
RD-DCR



RD-HDCR



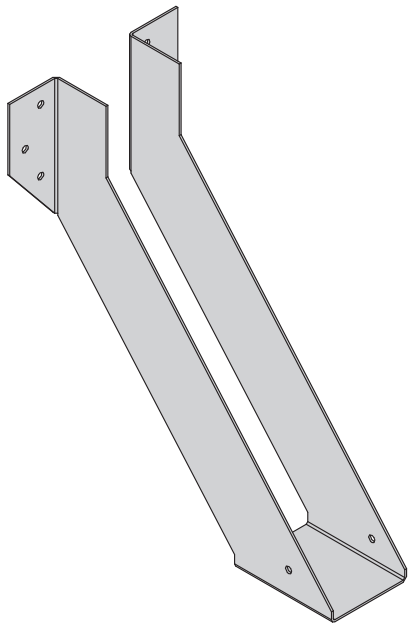
RD-CDCR



The RD Range is only applicable in cases where the joists are permanently supported on the timber frame wall panels. It must not be used as a supporting hanger.

RD-DCR

Disproportionate Collapse Restraint



The RD-DCR hanger is a disproportionate collapse restraint for supporting internal beams onto the rim beam. It allows the internal beam to bear onto the timber frame panel below and fix to the rim beam, enabling the restraint to comply with disproportionate collapse requirements.

Features & Benefits

- Permits increased standardisation of details for all storey heights
- Improves low frequency sound insulation performance
- Improves stiffness of the floor

Approvals

- Allows timber separating floor to comply with sound insulation requirements of Robust Details for Part E (RD Handbook E-FT-1 and E-FT-2) for all storey heights
- Complies with Part A disproportionate collapse requirements

Material Specification

- Galvanised mild steel - Z275

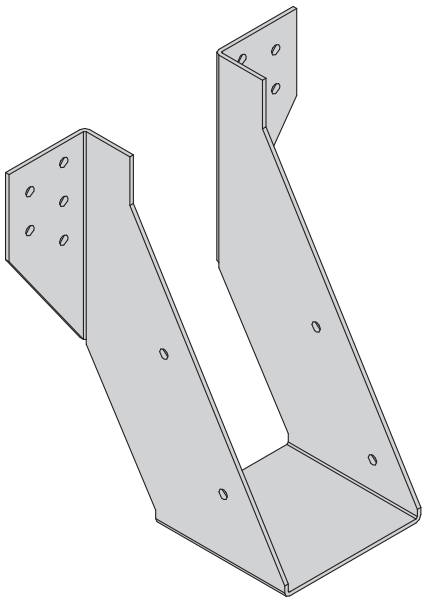
RD-HDCR

Heavy Disproportionate Collapse Restraint



The RD-HDCR hanger is a high load disproportionate collapse restraint for supporting internal beams onto the rim beam. It allows the internal beam to bear onto the timber frame panel below and fix to the rim beam, thus enabling the restraint to comply with disproportionate collapse requirements.

Features & Benefits

- Permits increased standardisation of details for all storey heights
- Improves low frequency sound insulation performance
- Improves stiffness of the floor

Approvals

- Allows timber separating floor to comply with sound insulation requirements of Robust Details for Part E (RD Handbook E-FT-1 and E-FT-2) for all storey heights
- Complies with Part A disproportionate collapse requirements

Material Specification

- Galvanised mild steel - Z275

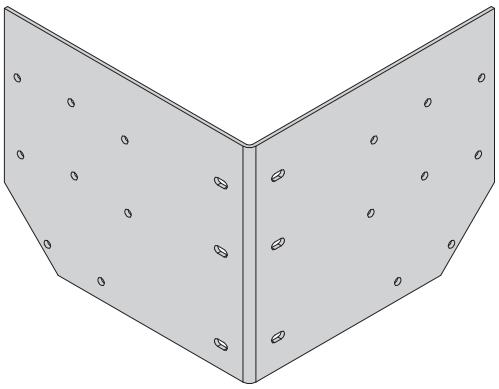
RD-CDCR

Corner Disproportionate Collapse Restraint



The RD-CDCR hanger is a disproportionate collapse detail for connecting rim beams at corner junctions.

Features & Benefits

— Face fixed corner bracket with high load connection avoids base plate compromising air tightness of the rim beam

— One bracket to suit all joist depths

Material Specification

— Galvanised mild steel - Z275

Fixings

16No Paslode PSTS 6.5 x 35mm supplied with hanger
3No Paslode PSTS 6.5 x 115mm supplied with hanger

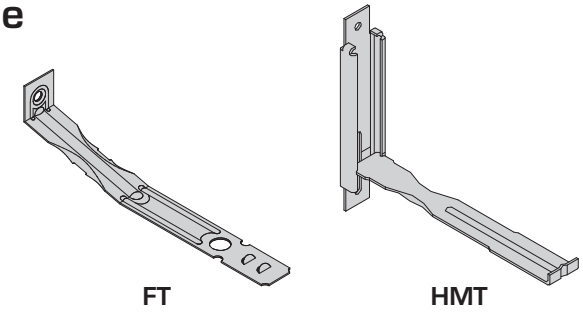
Timber Frame Wall Ties

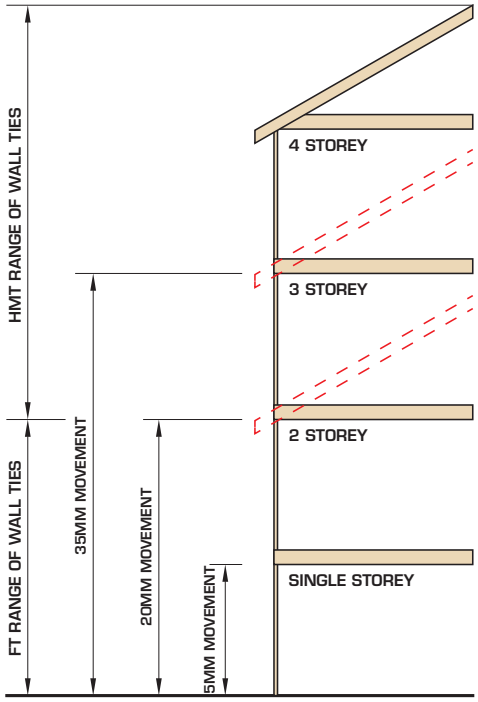
Differential Movement in Timber Frame

New Requirements (Build Type)		Vertical Movement Allowed (mm)	Solution
Solid timber joists	2 storey	20	FT
	3 storey and above	35+	HMT
EWP joists	2 storey	15	FT
	3 storey	25	FT
	4 storey and above	35 - 60	HMT

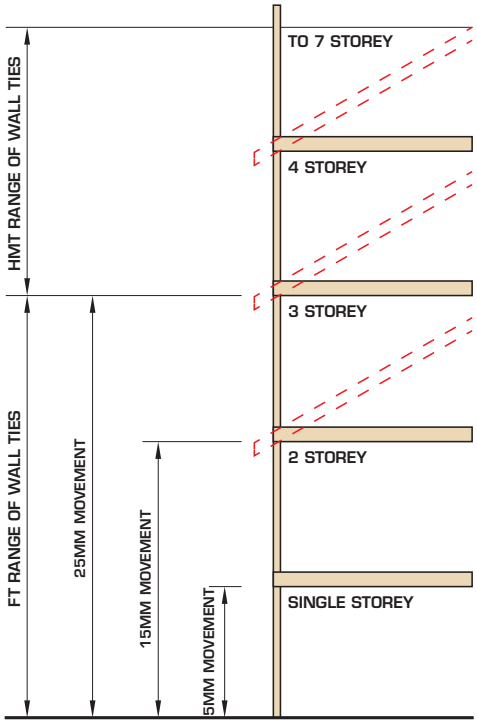


Cullen standard wall ties FT-50, 75 &100 accommodate maximum differential movement of 25mm and therefore can be used up to eaves level on a 2 storey for solid timber joists and up to 3 storey for EWP joist floors. For 3 storey solid timber joists and 4 storey EWP joists you will now require the Cullen High Movement Tie (HMT).

Previously, the old requirements stated 6mm movement per floor and allowed the FT range to be used for 4-storey buildings. The HMT is the only timber to masonry wall tie which has been fully tested to allow for 75mm vertical movement. Under the new guidelines this would allow the HMT to be used on 7 storey timber frame with EWP joists on the intermediate floors.



INTERMEDIATE FLOORS CONSTRUCTED USING SOLID TIMBER JOISTS



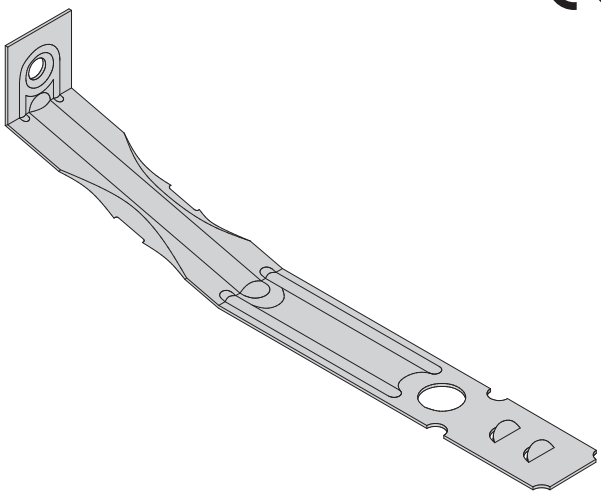
INTERMEDIATE FLOORS CONSTRUCTED USING EWP JOISTS

The above information is for guidance only, it states the maximum allowed movement of the Cullen timber frame wall tie range. For specific tie fixings please refer to the Building Engineer and/or section 6.2 of NHBC standards.

Gap Location	W	Gap sizes Closing Gap (CG) at window sills level and Opening (OG) at windows head levels	
		Joist Material	
		Solid Timber (mm)	Engineered I-Joist (mm)
Bottom level (single storey)	A	5	5
Level 1 (2 storey)	B	20	15
Level 2 (3 storey)	C	35	25
Level 1 (4 storey)	D	45	35
Level 4 (5 storey)	E	Specialist calculation to be submitted to NHBC	45
Level 5 (6 storey)	F		53
Level 6 (7 storey)	G		61
Eaves / verge		Add 5mm to level below	

FT

Timber Frame / SIPs Wall Tie



The FT wall ties are used to restrain the external blockwork/brickwork back to the timber frame structure.

Features & Benefits

— Accommodates maximum differential movement of 24mm

— Available to suit up to 115mm wide cavities

Material Specification

— Austenitic stainless steel

Approvals

— CE marked and tested in accordance with BS EN 845-1

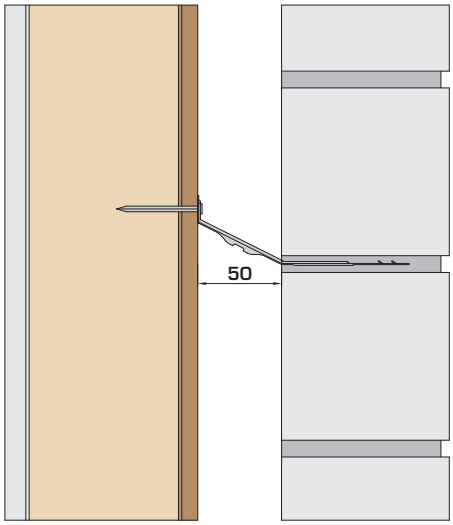
— Meets NHBC & Homebond technical requirements

Fixings

3.35 x 50mm annular ring shank nails supplied with part

Code	Description	Box Qty
114386	5.0 x 25mm Pozidrive Stainless Steel Screws	200

In Situ



— Maximum horizontal expansion of 1.4mm on a 50mm cavity

— Additional ties are required at door and window openings (Spacing should be no more than 300mm vertical centres and within 225mm of the jambs at openings)

— Top row of ties should be 3 courses below top of brickwork

— Spacing also required at each side of vertical expansion joints

— Closer vertical spacing may be required in exposed locations as determined by the Building Designer

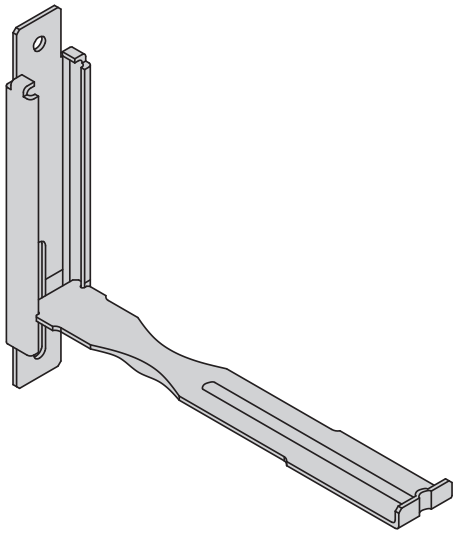
HMT

High Movement Timber Frame Wall Tie



The HMT wall ties are used to restrain the external blockwork/brickwork back to the timber framed structure. They provide greater performance to accommodate differential movement in medium to high-rise structures.

Features & Benefits

— Accommodates maximum differential movement of 75mm

Material Specification

— Austenitic stainless steel

Approvals

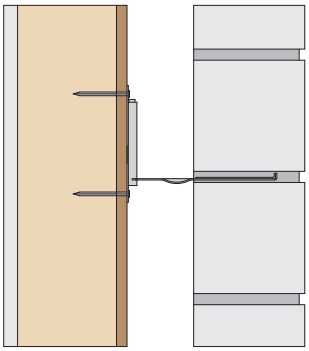
— CE marked & tested in accordance with BS EN 845-1

— Meets NHBC & Homebond technical requirements

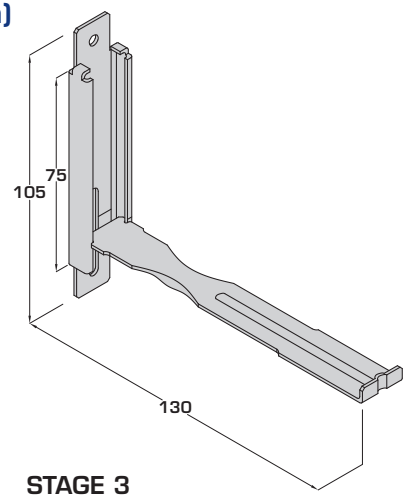
Fixings

3.35 x 50mm annular ring shank nails supplied with part

In Situ

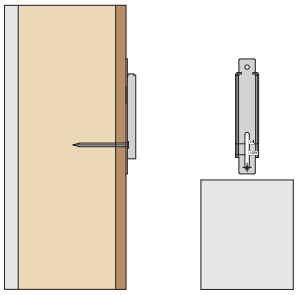


Dimensions (mm)



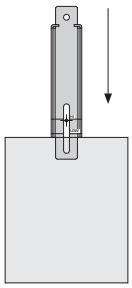
Installation Instructions

STAGE 1



Nail channel into wall panel by nailing 1No fixing at the bottom of the slot. Allow adequate space above the masonry to hammer fix.

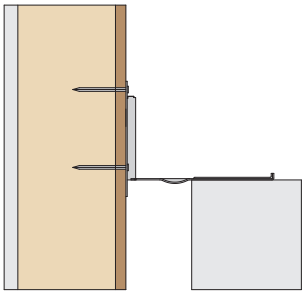
STAGE 2



Position channel by lightly tapping with a hammer until channel is in correct position.

The tie should line through with the LOW marker to allow full 75mm movement.

STAGE 3



Once the channel is in position fix the top round hole into the wall panel, position the tie and build the next course of block work.

LOW - 75mm movement
HIGH - 65mm movement

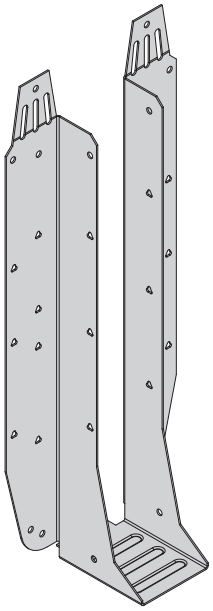
UH (I-Joist Applications)

Universal Hanger

ETA - 13/0343

Patent Pending



The UH hanger is designed for any joist to joist, joist to trimmer or joist to steel application.

Features & Benefits

- Elongated slots and unique snap off feature allows for height adjustment and face fix only option
- One hanger solution for backer and backerless I-Joists
- Rear location tab to assist with installation
- Additional triangular fixing holes for increased performance on solid members
- Suitable for connections to steel work - see pages 76 - 77

Material Specification

- Galvanised mild steel - Z275

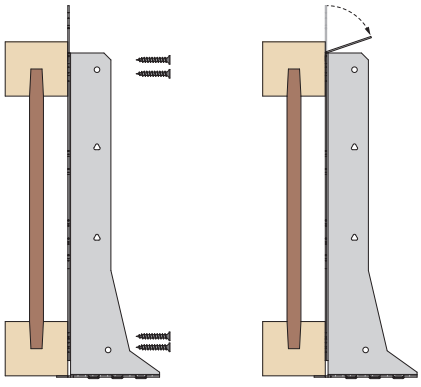
3.5 x 30mm multi-purpose wood screws may be used as an alternative fixing for temporary supporting hanger.

Installation Instructions

Face Fix Option

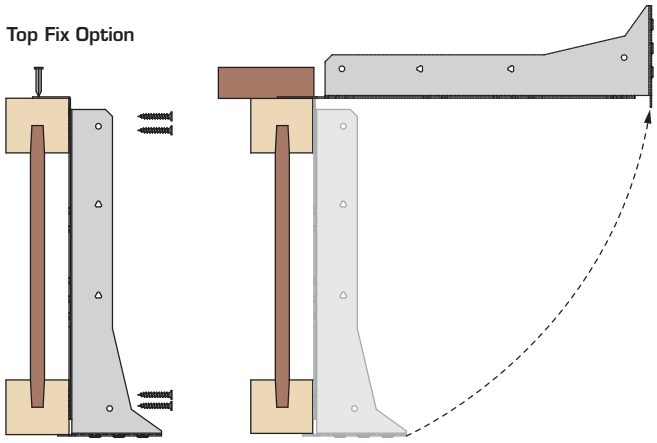


Face fix to top and bottom flanges using 8No 3.5 x 30mm multi purpose wood screws or 3.4 x 35mm square twist nails.

Bend tabs forward and snap off.

Once ready for stairs to be installed the deck can be cut and joists/hangers removed.

Top Fix Option



Face fix to top and bottom flanges using 8No 3.5 x 30mm multi purpose wood screws or 3.4 x 35mm square twist nails.

Bend top tabs over joist top flange and nail using 1No 3.4 x 35mm square twist nail per leg.

Once ready for stairs to be installed the deck can be cut and joists/hangers removed.

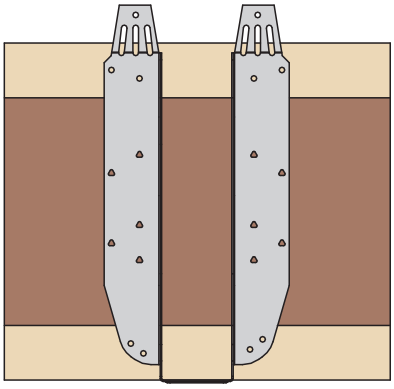
Hanger to be rotated through 90 degrees to snap off at break line.

UH (I-Joist Applications)

Universal Hanger

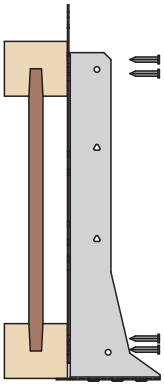
Standard Installation Instructions - I-Joist Header without Backer Block

STAGE 1



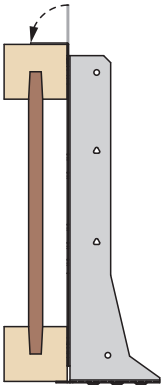
Position hanger against face of I-Joist with locating tab tight to underside of joist.

STAGE 2



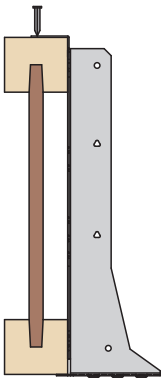
Face nail to top and bottom flanges using 8No 3.4 x 35mm square twist nails in total.

STAGE 3



Wipe over top tabs to give a flush fit to the joist.

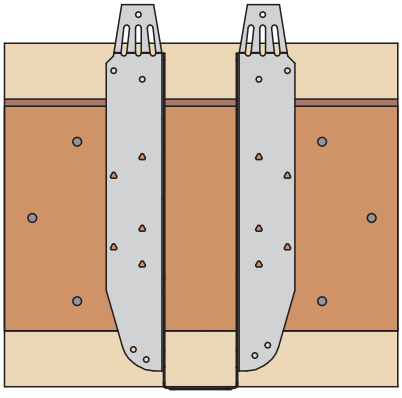
STAGE 4



Nail top tabs into top flange of joist - 1No 3.4 x 35mm square twist nail per tab.

Enhanced Installation Instructions - I-Joist Header with Backer Block

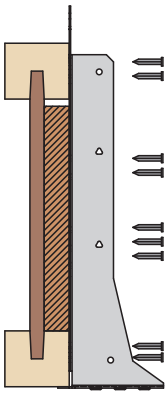
STAGE 1



Position hanger against face of I-Joist with locating tab tight to underside of joist.

Backer block installed as per I-Joist manufacturer's guidelines.

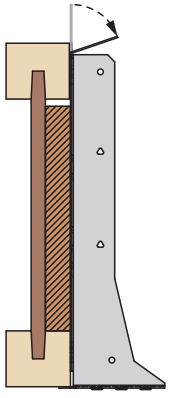
STAGE 2



Fill all round and triangular nail holes to header and backer face with 3.4 x 35mm square twist nails.

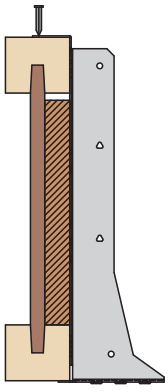
STAGE 3

Option 1



Bend top tab forward and snap off.

Option 2



Wipe over top tabs to give a flush fit to the joist.

Nail top tabs into top flange of joist - 1No 3.4 x 35mm square twist nail per tab.

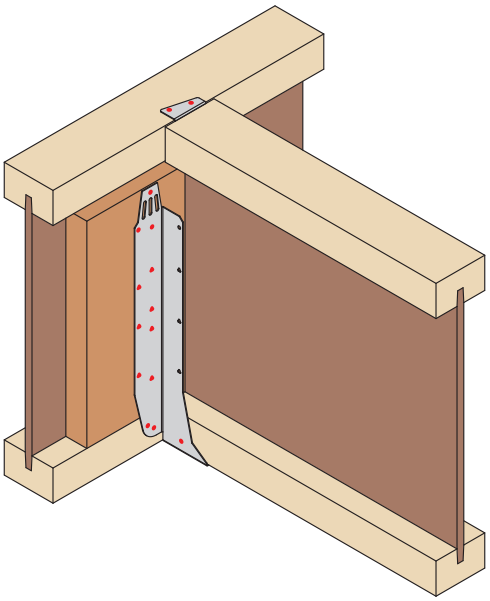
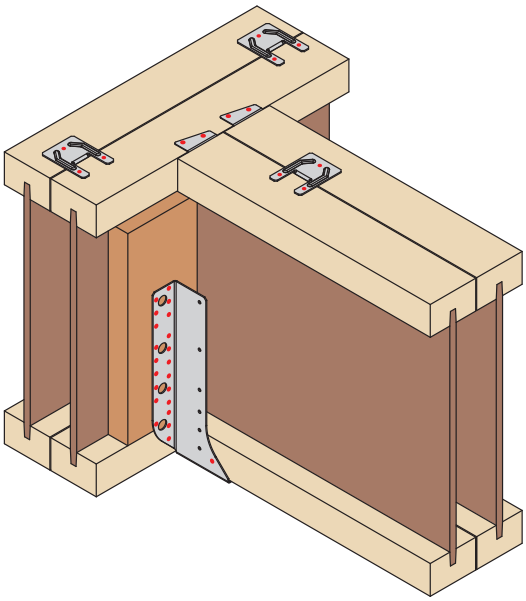
Universal Hanger

UH/MHE With UZ-Clip Installation (to support 350 - 450mm deep I-Joists)

UH-300 & UZ Clip - For Single Joists



MHE & UZ Clip - For Double Joists



Features & Benefits

- Solution to support 350 - 450mm deep I-Joists with shallower UH/MHE hanger and UZ-Clip to prevent rotation and remove the need for installing time consuming web stiffeners
- Shallower height UH (300mm) and MHE (620) hangers can be used to replace deeper FFI 350, 400 and 450mm deep hangers

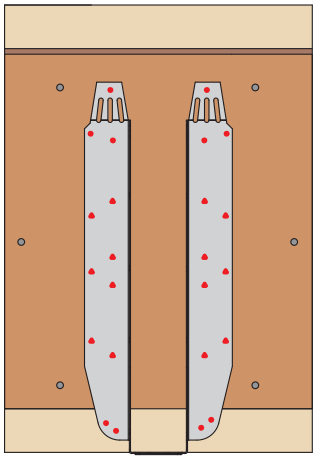
UH-300 & UZ-Clip - Installation

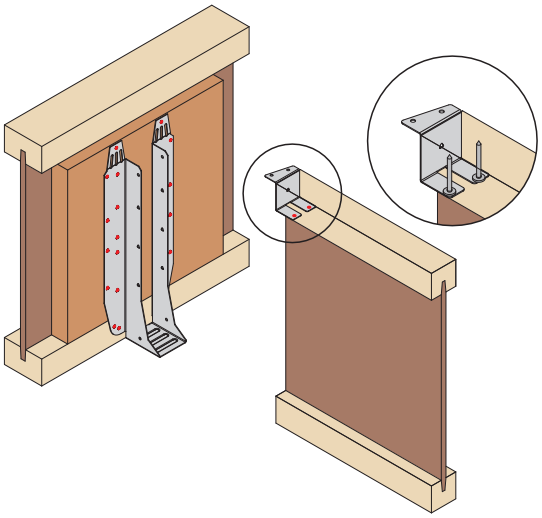
STAGE 1



Position hanger against face of I-Joist with locating tab tight to underside of joist.

Backer block installed as per I-Joist manufacturer's guidelines.

STAGE 2

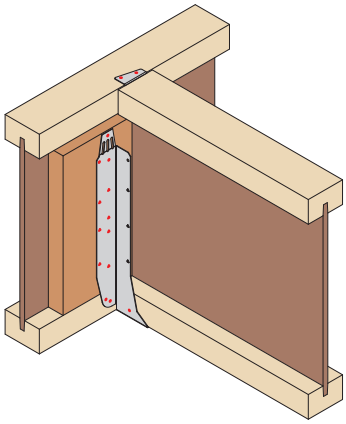


Fix UZ-Clip to top flange of supported member using:

2No 3.4 x 35mm square twist nails.

2No UZ-Clips required for double incoming.

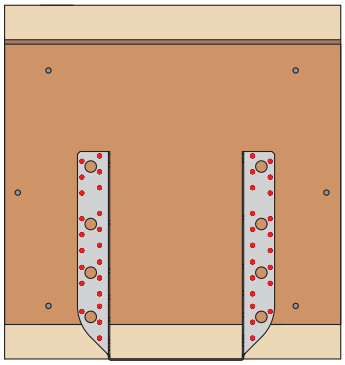
STAGE 3



Offer incoming member into the UH hanger and fix to joist bottom flange/backer block and UZ-Clip to header member.

MHE & UZ-Clip - Installation

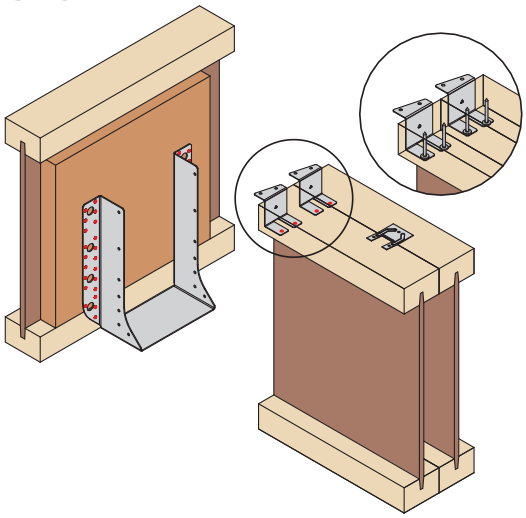
STAGE 1



Position hanger against face of I-Joist with locating tab tight to underside of joist.

Backer block installed as per I-Joist manufacturer's guidelines.

STAGE 2

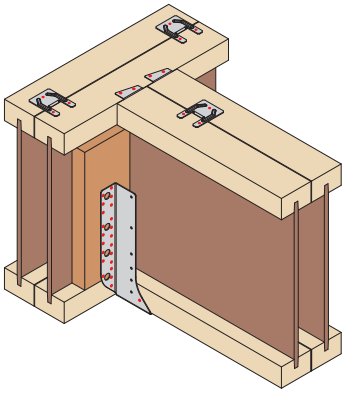


Fix UZ-Clips to top flange of supported member using:

2No 3.4 x 35mm square twist nails per UZ-Clip.

2No UZ-Clips required for double incoming.

STAGE 3



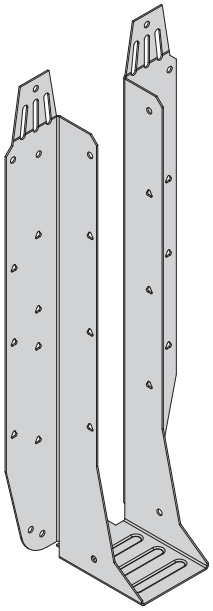
Offer incoming member into the MHE hanger and fix to joist bottom flange/backer block and UZ-Clip to header member.

UH (Open Web Applications)

Universal Hanger

ETA - 13/0343

Patent Pending



The UH hanger is designed for any joist to joist, joist to trimmer or joist to steel application.

Features & Benefits

- Elongated slots and unique snap off feature allows for height adjustment and face fix only option
- One hanger solution for backer and backerless I-Joists
- Rear location tab to assist with installation
- Additional triangular fixing holes for increased performance on solid members
- Suitable for connections to steel work - see pages 76 - 77

Material Specification

- Galvanised mild steel - Z275

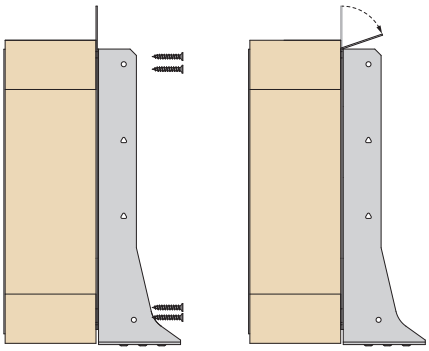
3.5 x 30mm multi-purpose wood screws may be used as an alternative fixing for temporary supporting hanger.

Installation Instructions

Face Fix Option

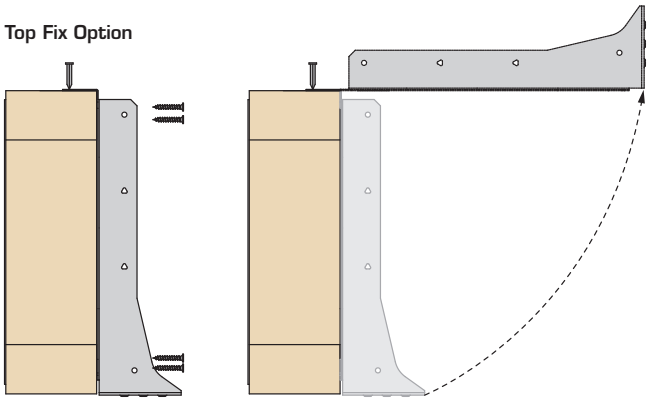


Face fix to top and bottom chords using 8No screws or nails.

Bend tabs forward and snap off.

Once ready for stairs to be installed the deck can be cut and joists/hangers removed.

Top Fix Option



Face fix to top and bottom chords using 8No screws or nails.

Bend top tabs over joist top flange and nail using 1No fixing per leg.

Once ready for stairs to be installed the deck can be cut and joists/hangers removed.

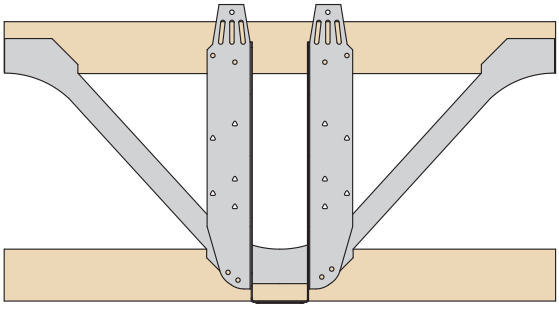
Hanger to be rotated through 90° to snap off at break line.

UH (Open Web Applications)

Universal Hanger

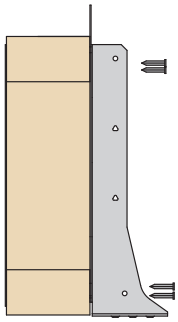
Standard Installation Instructions - Open Web Header

STAGE 1



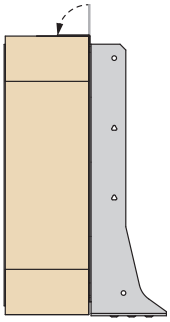
Position hanger against face of open web joist with locating tab tight to underside of joist.

STAGE 2



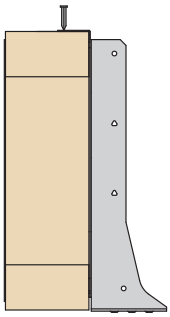
Face nail to top and bottom chords using 8No 3.4 x 35mm square twist nails in total.

STAGE 3



Wipe over top tabs to give a flush fit to the joist.

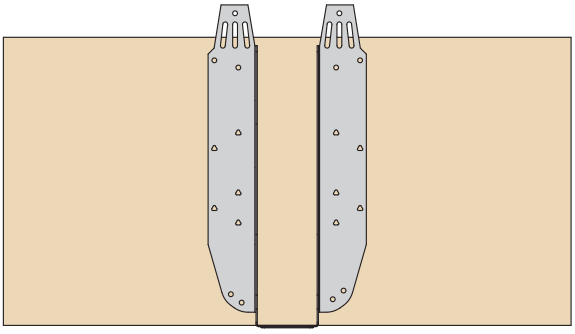
STAGE 4



Nail top tabs into top chord of joist - 1No 3.4 x 35mm square twist nail per tab.

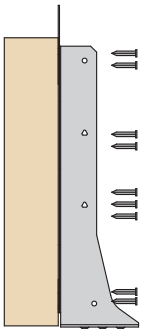
Enhanced Installation Instructions - Solid Header

STAGE 1



Position hanger against face of joist with locating tab tight to underside of joist.

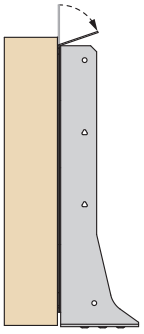
STAGE 2



Fill all round and triangular nail holes to header with 3.4 x 35mm square twist nails.

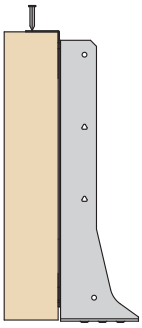
STAGE 3

Option 1



Bend top tab forward and snap off.

Option 2



Wipe over top tabs to give a flush fit to the joist.

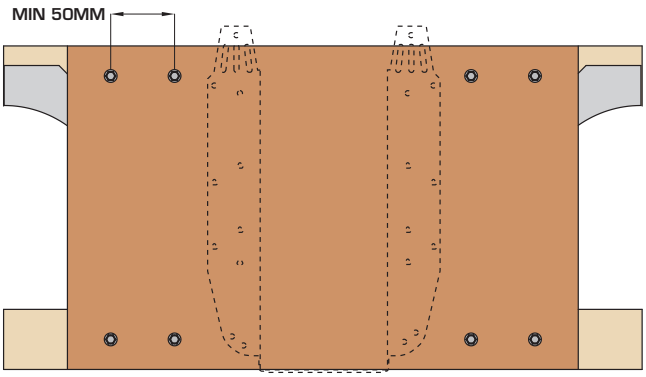
Nail top tabs into top chord of joist - 1No 3.4 x 35mm square twist nail nail per tab.

UH (Open Web Applications)

Universal Hanger

Open Web Header With Plywood Gusset Instructions

STAGE 1

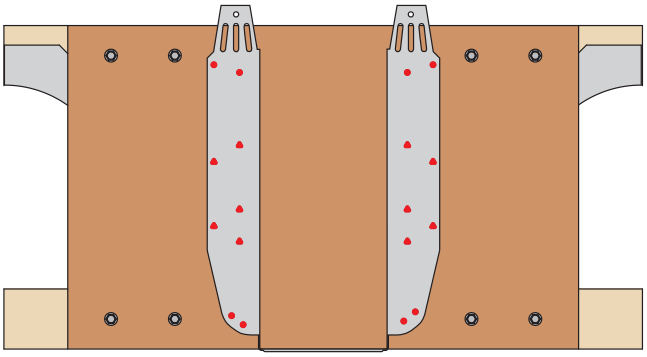


18mm plywood should be fixed to the face of the open web joist with 4No PSTS 6.5mm into the top chord and 4No PSTS 6.5mm into the bottom chord.

Plywood should be the full depth of the open web and of a width to give the screws the appropriate edge distance.

Paslode Structural Timber Screws should be used to fix the plywood to the open web joist. The screw length is dependant on the joist thickness.

STAGE 2



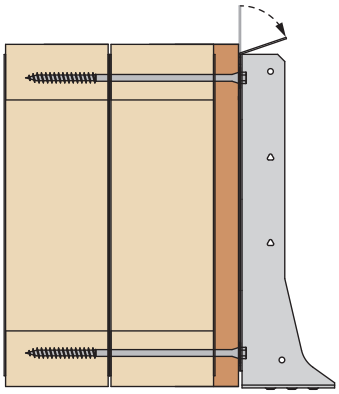
Position hanger flush with underside of joist.

Circular nail holes filled from bottom to top ensuring hanger side flanges are plumb.

All fixings are 3.4 x 35mm square twist nails.

Optional triangular nail holes should also be filled.

STAGE 3



Bend top tabs forward and snap off.

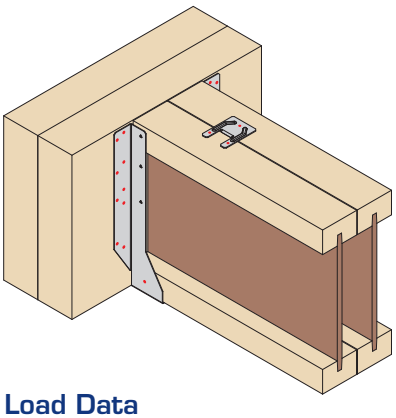
I-Joist Incoming - Solid Header



See Page 64 For Installation Instructions

- Fill all red holes as indicated for this installation
- All face fixings required into header member
- Web stiffeners not required (unless required from I-Joist provider)

Additional triangular holes into incoming joist only required for enhanced uplift. (for details see page 63)

NEW NHBC ACCEPTED DETAIL

To support 350 - 450mm deep joists (see page 52)

Face Fix I-Joist Hanger

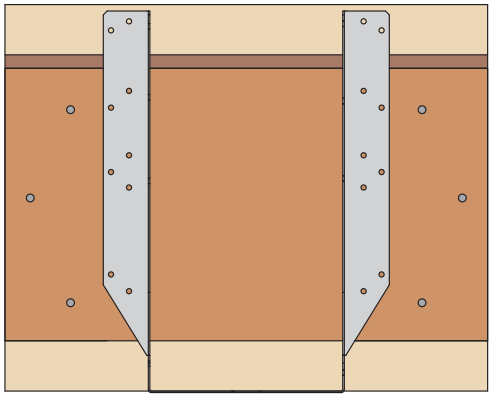
I-Joist Incoming - I-Joist Header With Backer Block Installation Instructions

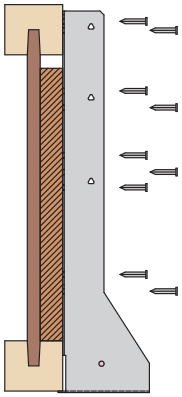
STAGE 1



Position hanger flush with underside of joist.

Backer block installed as per I-Joist manufacturer's guidelines.

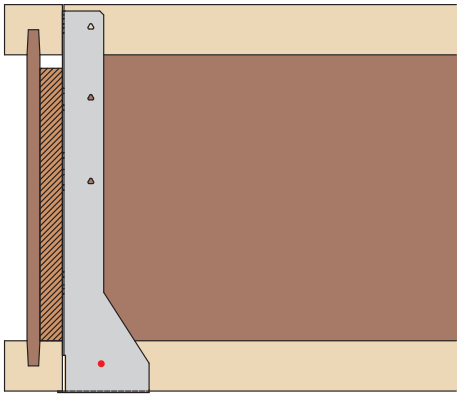
STAGE 2



Circular nail holes filled from bottom to top ensuring hanger side flanges are plumb.

All fixings are 3.4 x 35mm square twist nails.

STAGE 3



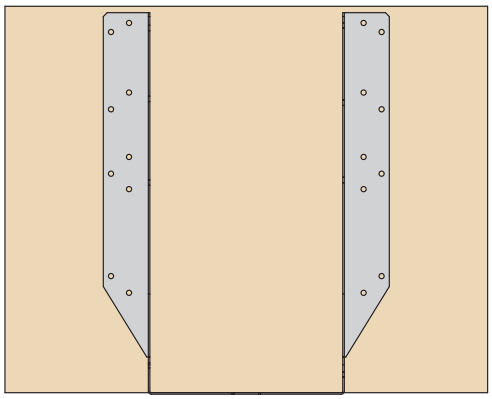
Once hanger is fully fixed the incoming joist is dropped into place and circular side nail holes are filled to secure incoming joist and complete installation.

2No fixings into bottom flange are required for standard installation.

Additional triangular holes into incoming joist only required for enhanced uplift (for details see page 63)

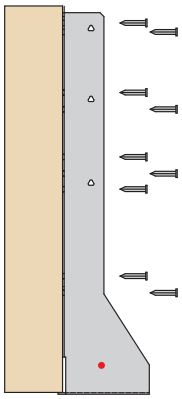
I-Joist/Solid Incoming - Solid Header Installation Instructions

STAGE 1



Position hanger flush with underside of joist.

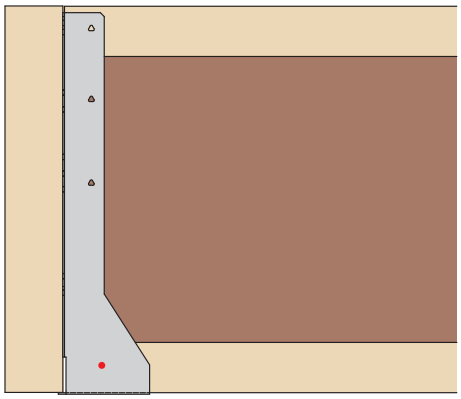
STAGE 2



Circular nail holes filled from bottom to top ensuring hanger side flanges are plumb.

All fixings are 3.4 x 35mm square twist nails.

STAGE 3



Once hanger is fully fixed the incoming joist is dropped into place and circular side nail holes are filled to secure incoming joist and complete installation.

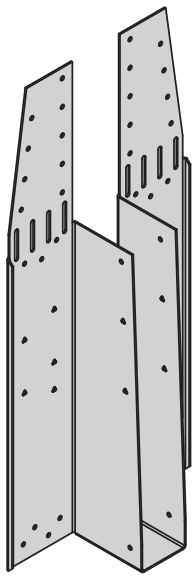
2No circular bottom fixings are required for standard installation.

Additional triangular holes into incoming joist only required for enhanced uplift (for details see page 63)

HUH (I-Joist Applications)

Heavy Universal Hanger

ETA - 13/0343



The HUH hanger is designed for any joist to joist, joist to trimmer or joist to steel application in high load applications.

Features & Benefits

- Elongated slots for height adjustment
- One hanger solution for backer and backerless I-Joists
- Additional triangular fixing holes for increased performance on solid members
- Suitable for connections to steel work - see pages 76 - 77

Material Specification

- Galvanised mild steel - Z275

Fixings

Code	Description	Box Qty
547389	3.4 x 35mm Square Twist Nails - LOOSE	500

HUH (I-Joist Applications)

Heavy Universal Hanger

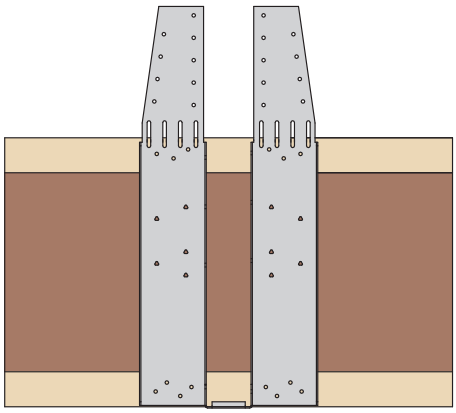
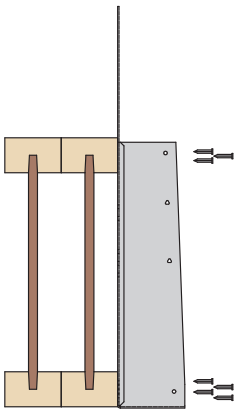
Standard Installation Instructions - I-Joist Header without Backer Block

STAGE 1



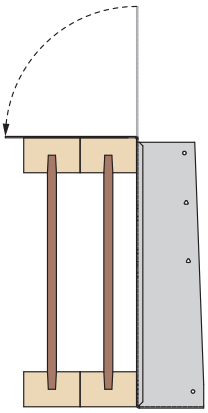
Position hanger flush with underside of joist.

STAGE 2



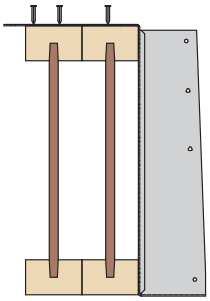
Face nail to top and bottom flanges using 14No 3.4 x 35mm square twist nails in total.

STAGE 3



Wipe over top tabs to give a flush fit to the joist.

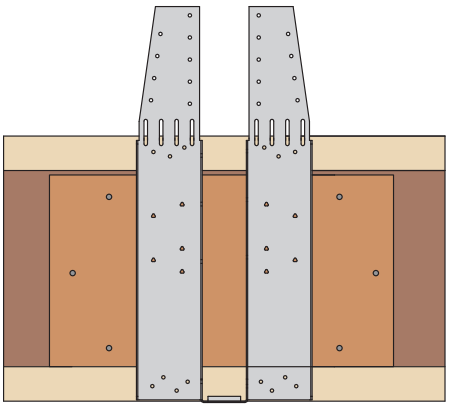
STAGE 4



Nail top tabs into top flange of joist - Min 2No 3.4 x 35mm square twist nails into rear ply and 1No 3.4 x 35mm square twist nail into front ply per leg.

Enhanced Installation Instructions - I-Joist Header with Backer Block

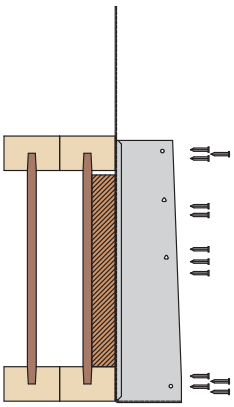
STAGE 1



Position hanger flush with underside of joist.

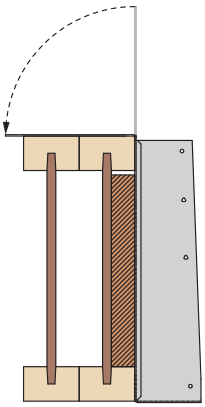
Backer block installed as per I-Joist manufacturer's guidelines.

STAGE 2



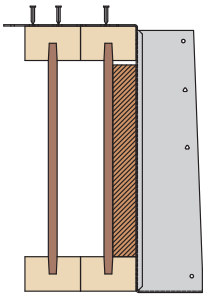
Fill all round and triangular nail holes to header and backer face with 3.4 x 35mm square twist nails.

STAGE 3



Wipe over top tabs to give a flush fit to the joist.

STAGE 4



Nail top tabs into top flange of joist - Min 2No 3.4 x 35mm square twist nails into rear ply and 1No 3.4 x 35mm square twist nail into front ply per leg.

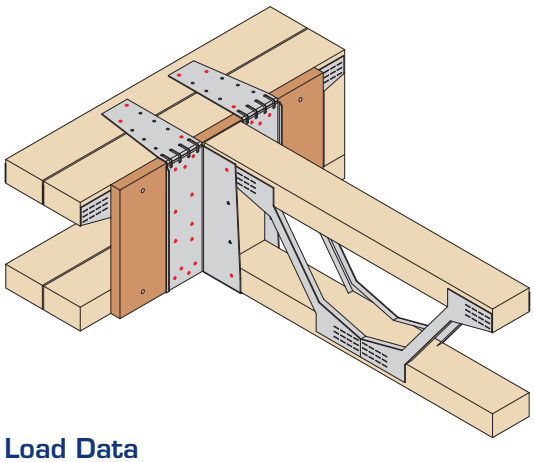
Enhanced Installation - Open Web Header With Plywood Gusset



See Page 75 For Installation Instructions

- Fill all red holes as indicated for this installation
- 18mm plywood gusset should be screwed into open web header with the appropriate screws - see installation instructions for more information
- All nail holes filled into plywood gusset (including triangular)
- Top tabs to be wiped over and nailed

Additional triangular holes into incoming joist only required for enhanced uplift. (for details see page 72)

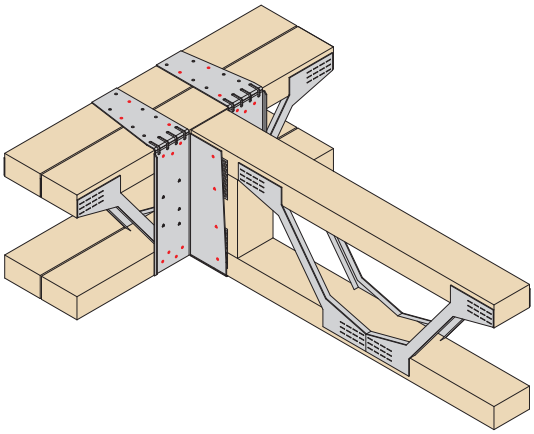
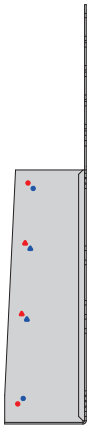
HUH (Open Web Applications)

Heavy Universal Hanger

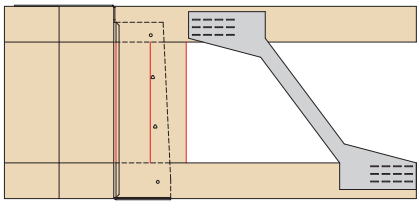
Enhanced Uplift





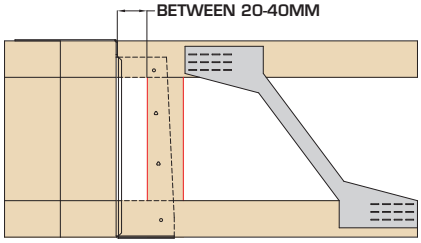
195 - 400MM

- Fill all red holes as indicated for this installation
- Fixings into the incoming joist are required to resist uplift
- Increased uplift figures can be achieved by nailing the additional triangular nail holes into the incoming member - solid incoming or full width vertical required



Hanger side flanges/plates omitted for clarity

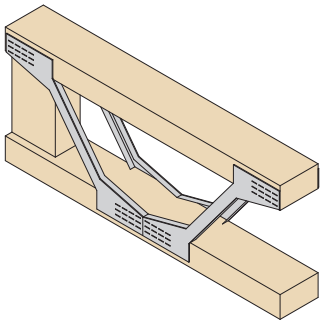
2No end verticals required to achieve full uplift capacity.



Hanger side flanges/plates omitted for clarity

Single end verticals can be used if the gap between the back of the hanger and the vertical is between 20 - 40mm.

Incorrect Installation



Do not use HUH for enhanced uplift when using trimmable ends

Load Data

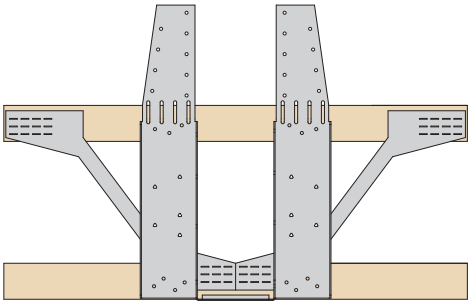
Hanger Depth (mm)	Fixings (3.4 x 35mm)	Safe Working Loads (kN)		Characteristic Capacity (kN)
(Depth Dependent Only)	Incoming	Uplift - Short Term	Uplift - Long Term	Uplift
195 - 400	8	3.98	3.31	7.97

HUH (Open Web Applications)

Heavy Universal Hanger

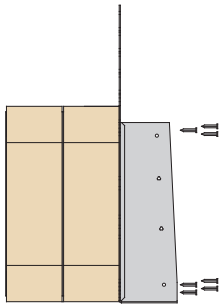
Standard Installation Instructions - Open Web Header

STAGE 1



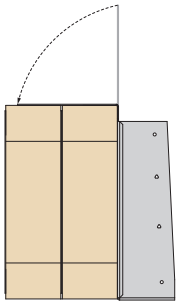
Position hanger flush with underside of joist.

STAGE 2



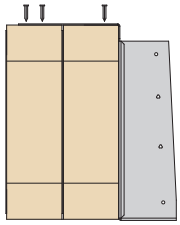
Face nail to top and bottom chords using 14No 3.4 x 35mm square twist nails in total.

STAGE 3



Wipe over top tabs to give a flush fit to the joist.

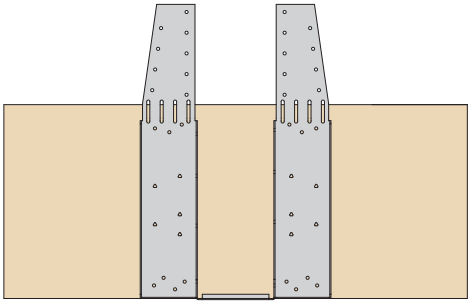
STAGE 4



Nail top tabs into top chord of joist - Min 2No 3.4 x 35mm square twist nails into rear ply and 1No 3.4 x 35mm square twist nail into front ply per leg.

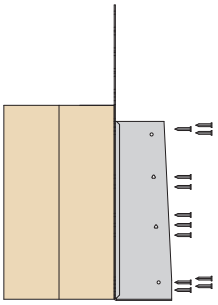
Enhanced Installation Instructions - Solid Header

STAGE 1



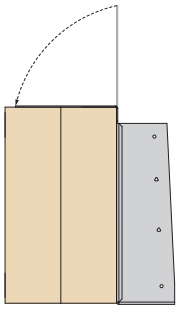
Position hanger flush with underside of joist.

STAGE 2



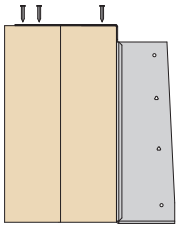
Fill all round and triangular nail holes to header joist with 3.4 x 35mm square twist nails.

STAGE 3



Wipe over top tabs to give a flush fit to the joist.

STAGE 4

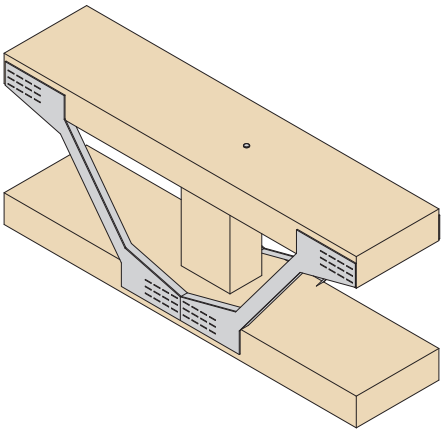


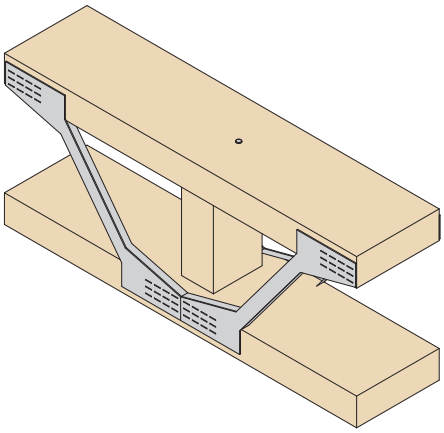
Nail top tabs into top chord of joist - Min 2No 3.4 x 35mm square twist nails into rear ply and 1No 3.4 x 35mm square twist nail into front ply per leg.

HUH (Open Web Applications)

Heavy Universal Hanger

Standard Installation With Blocking Instructions - Open Web Header

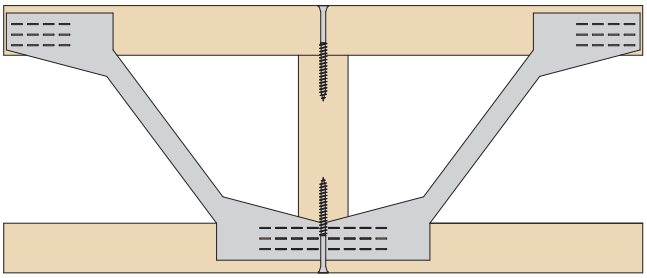




Applying a high load to the top flange of an open web joist can lead to failure of the joist itself (i.e metal webs buckling)

Adding a vertical blocking piece to the open web joist prevents buckling and helps transfer the load, therefore allowing the hanger to perform to a greater capacity.

STAGE 1

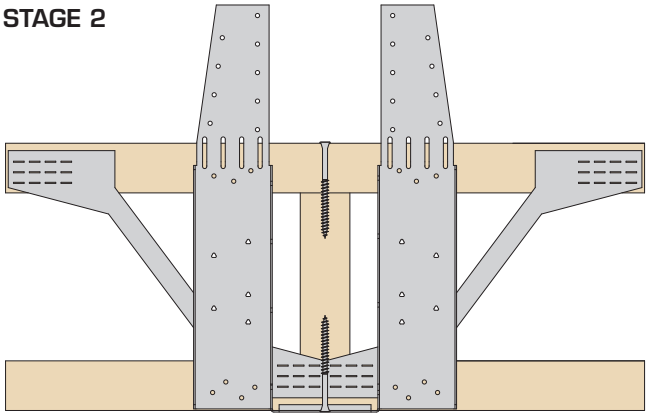


Vertical blocking piece to be built into Open Web Joist, centred on incoming hanger position.

Vertical blocking piece to be minimum 47 x 72mm C16 timber.

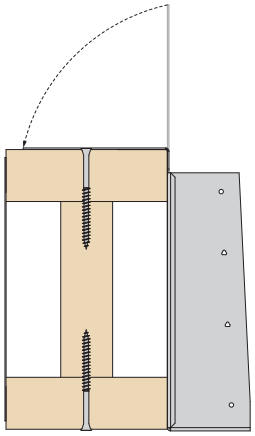
Fixed using Paslode 3.1 x 90mm annular ring shank nails.

STAGE 2



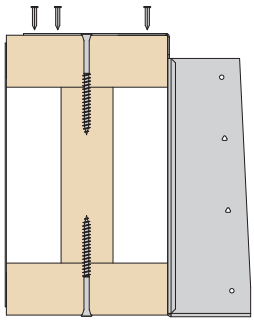
Position hanger against face of Open Web Joist with locating tab tight to underside of joist.

STAGE 3



Wipe over top tabs to give a flush fit to the joist.

STAGE 4



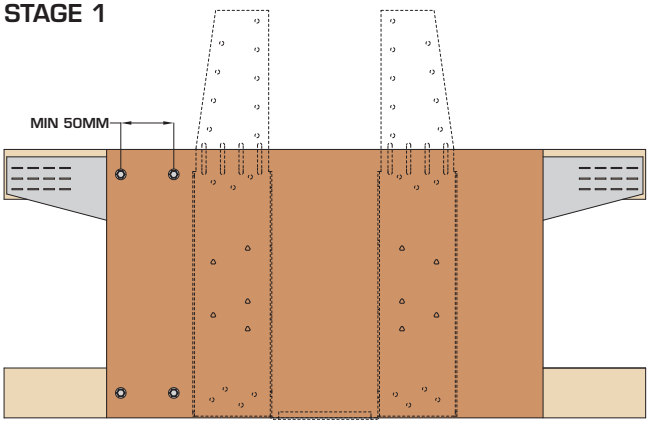
Nail top tabs into top chord of joist - Min 2No 3.4 x 35mm square twist nails into rear ply and 1No 3.4 x 35mm square twist nail into front ply per leg.

HUH (Open Web Applications)

Heavy Universal Hanger

Open Web Header With Plywood Gusset Instructions

STAGE 1

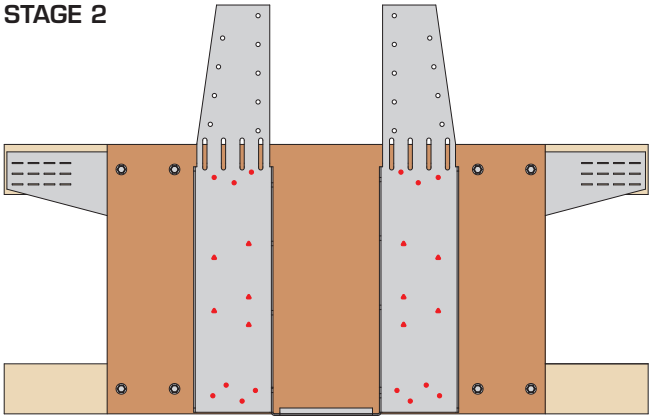


18mm plywood should be fixed to the face of the open web joist with 4No PSTS 6.5mm into the top chord and 4No PSTS 6.5mm into the bottom chord.

Plywood should be the full depth of the open web and of a width to give the screws the appropriate edge distance.

Paslode Structural Timber Screws should be used to fix the plywood to the open web joist. The screw length is dependant on the joist thickness.

STAGE 2



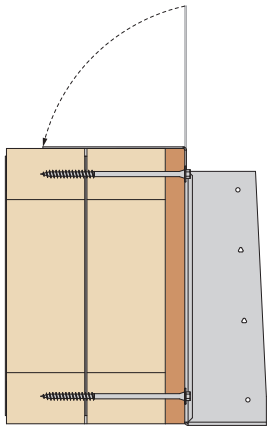
Position hanger flush with underside of joist.

Circular nail holes filled from bottom to top ensuring hanger side flanges are plumb.

All fixings are 3.4 x 35mm square twist nails.

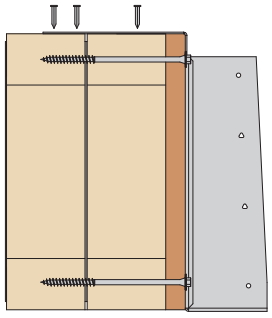
Triangular nail holes should also be filled.

STAGE 3



Wipe over top tabs to give a flush fit to the joist.

STAGE 4



Nail top tabs into top chord of joist - Min 2No 3.4 x 35mm square twist nails into rear ply and 1No 3.4 x 35mm square twist nail into front ply per leg.

HUH	24	6	11.07	23.30

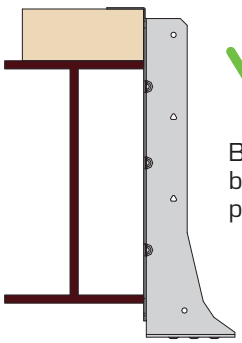
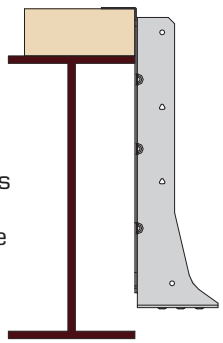
Preventing Hanger Rotation - "Do's and Don'ts"



Bottom of hanger extends past bottom flange of steel beam to prevent hanger rotation.

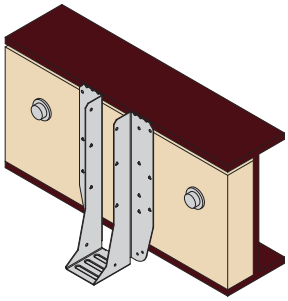
There is no resistance to rotation when the bottom of the hanger stops short of the bottom of the steel beam. Timber packing piece must be specified by the building designer.

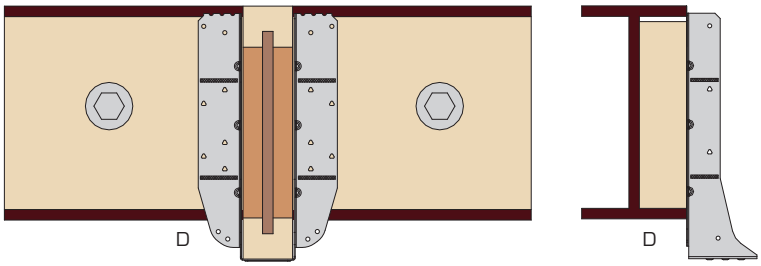


Steel Connections

TIMBER HANGER CONNECTIONS

UH Hanger - Face Fixed Only To Timber Packer Within Steel Beam





Timber packer to be securely fixed to web of steel beam, packer to be fixed tightly to bottom flange of steelwork.

Timber Packer to be a minimum of C16 grade timber.

Fixing of timber packer to steelwork by Building Designer.

Dropped dimension 'D' must not be greater than 30% of the overall joist depth.

UH Performance - Connection to Steelwork

*Values obtained from tests carried out by ITW Construction Products and calculated in accordance with ETAG 015.

Enhanced uplift capacity can be achieved by using additional triangular nail holes in the side flanges and fixing web stiffeners where the incoming joist is an I-joist. When using web stiffeners for this purpose ensure the I-joist manufacturer's fixing guidelines are followed.

MASONRY HANGER CONNECTIONS

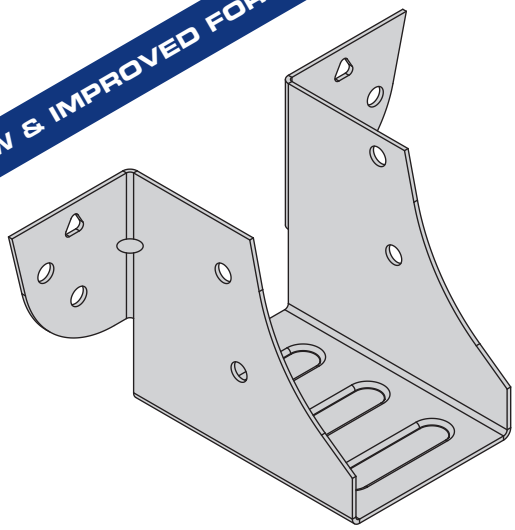
KM

Mini Hanger

NEW & IMPROVED FOR 2017



The KM hanger is used to support joists where a compact economical connector is required.

Features & Benefits

- New and improved design achieves higher load carrying capacities
- Additional side fixings allow for increased uplift capacity
- Optional triangular holes for increased performance on solid headers
- Rear location tab to assist with installation

Material Specification

- Galvanised mild steel - Z275

Approvals

- Meets NHBC Technical Requirements

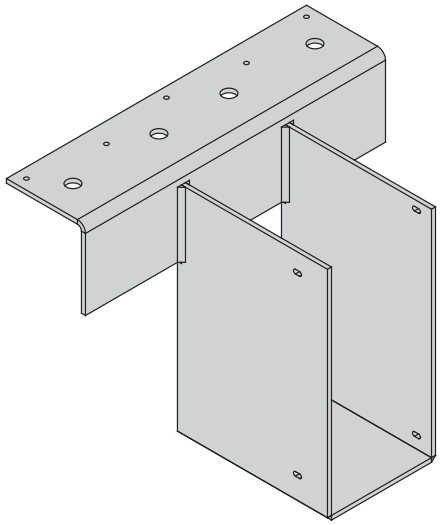
FTHI

Flexible Timber Hanger



The FTHI hanger is designed to support joists, trussed rafters and solid timber members in a top fix only application for high load situations.

Features & Benefits

- Increased top flange to allow for greater load distribution
- Options available for skewed, offset, dropped and straddle connections

Material Specification

- 4mm mild steel with zinc phosphate undercoat with an organic bituminous top coat to BS EN845-1:2013+A1:2016

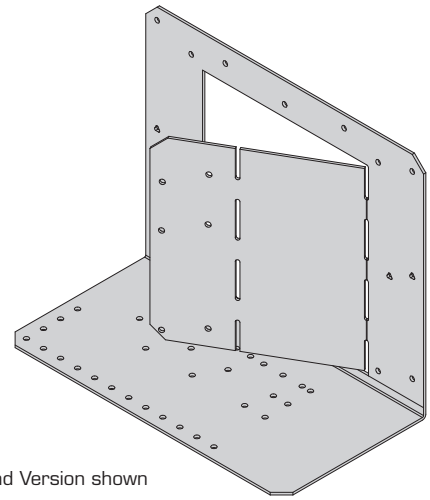
ETA - 08/0371



Right Hand Version shown

The VS hanger is used to support joists and trusses up to 97mm wide from solid timber members in skewed applications between 30 - 90°.

Features & Benefits

- Unique hanger design provides a variable skew angle between 30 - 90°
- No need to mitre cut joists
- Angle scale on base to ease adjustment

Material Specification

- Galvanised mild steel - Z275

Fixings

Code	Description	Box Qty
547389	3.4 x 35mm Square Twist Nails - LOOSE	500

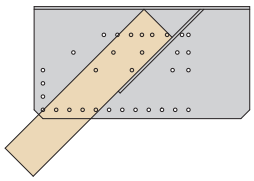
Installation Instructions

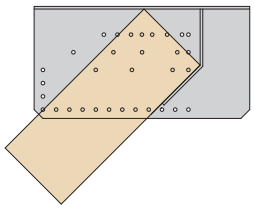
STAGE 1

Adjust side plate to approximate angle between 30° and 90° using scale on base of hanger, bending only once. Please refer to the angle table below to determine if one or two bends are required.

Single Bend



Double Bend

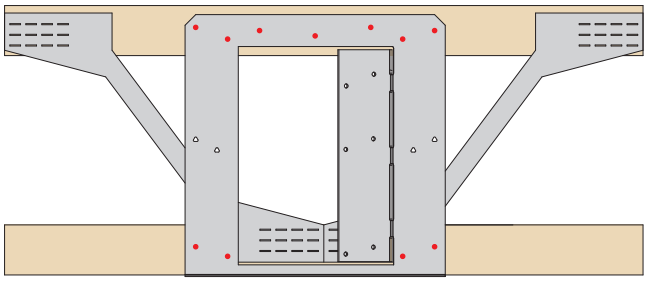


Joist Width (mm)	Single bend	Double Bend
35	n/a	30-90°
38	n/a	30-90°
44	n/a	30-90°
45	n/a	30-90°
47	n/a	30-90°
51	30-32°	>32-90°
53	30-32°	>32-90°
58	30-34°	>34-90°
59	30-34°	>34-90°
60	30-34°	>35-90°
63	30-37°	>37-90°
70	30-39°	>39-90°
72	30-40°	>40-90°
76	30-42°	>42-90°
88	30-46°	>46-90°
89	30-46°	>46-90°
90	30-46°	>46-90°
94	30-48°	>48-90°
97	30-49°	>49-90°

STAGE 2

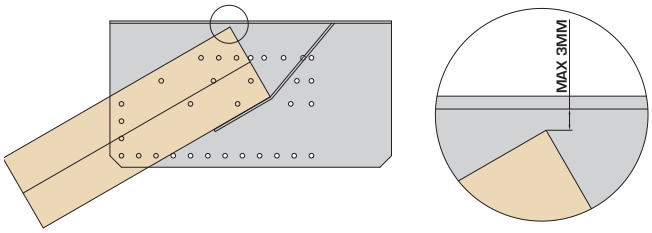
Position hanger against face of joist/truss and face nail using 11(15*)No nails in total.

*For solid headers



STAGE 3

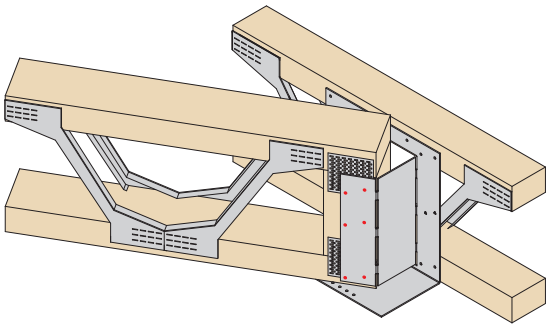
Locate incoming member and adjust side plate to correct angle, ensuring maximum gap between incoming joist/ truss and back plate is no greater than 3mm.



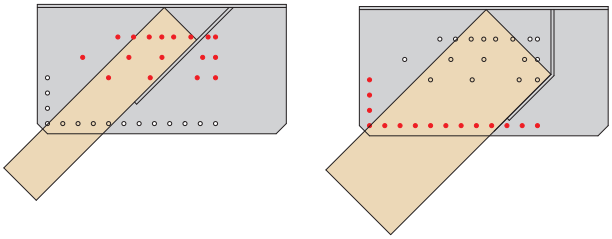
Max - 3mm gap at any given time

STAGE 4

Fix to incoming member using 6No 3.4 x 35mm square twist nails. Where incoming member is an I-Joist, web stiffeners must be fixed as per the I-Joist manufacturer's guidelines.



Please ensure that 1No inner nail hole (indicated in red) and 1No outer nail hole (indicated in red) are filled on the underside with 3.4 x 35mm square twist nails.



VRC

Variable Ridge Connector

ETA - 08/0371

The VRC connects solid timber and I-Joist rafters to ridge beams.

Features & Benefits

— Innovative design allows the part to be flexible for slopes between -35° and +45° and skews between 30° and 90°

Material Specification

— Galvanised mild steel - Z275

Fixings

Code	Description	Box Qty

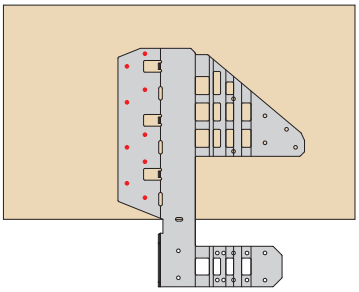
[1] I-Joist headers require backer blocks to be installed as per joist manufacturer's instructions.

Installation Instructions

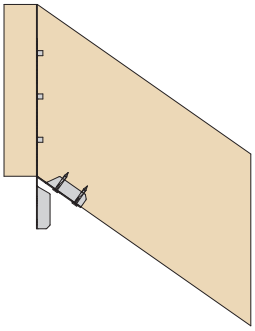
STAGE 1



Face fix VRC to solid header using 9No 3.4 x 35mm square twist nails.

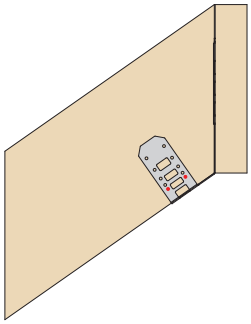
Adjust angle of base plate if slope is required.

STAGE 2



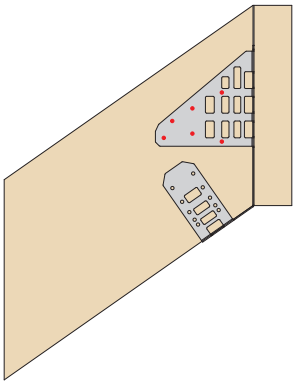
Offer incoming member and fix using 2No 3.4 x 35mm square twist nails to the underside of the incoming member.

STAGE 3



Wipe up the bottom side flange at the appropriate crease line and fill the 2No nail holes closest to the bend line with 3.4 x 35mm square twist nails.

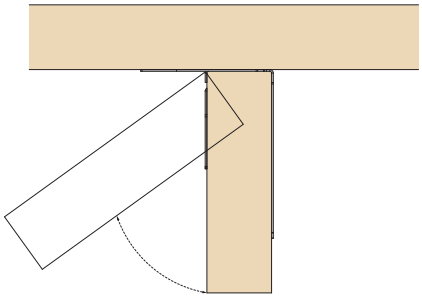
STAGE 4



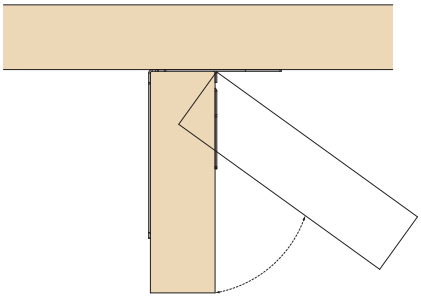
Wipe round the top side flange at the appropriate crease line and fill all the nail holes into the incoming joist. Minimum 4No 3.4 x 35mm square twist nails.

STAGE 5 (For skewed applications only)

Right hand version



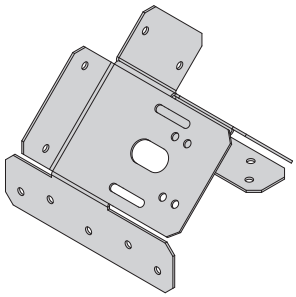
Left hand version



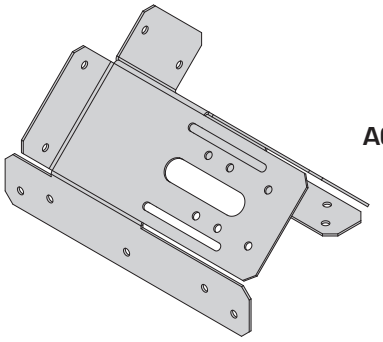
Rotate hanger to angle required. Correct hand must be used.
Please ensure the correct hanger has been selected prior to installing.

ACE

Adjustable Connector Eaves



ACE-39-50



ACE-61-100

The ACE is used to provide a secure connection between the EWP rafter and the wall plate at the eaves.

Features & Benefits

- Eliminates the need for a bevelled wall plate
- Unique part design allows 2 parts to accommodate rafter widths between 38 - 97mm wide

Material Specification

- Galvanised mild steel - Z275

Fixings

Code	Description	Box Qty
547389	3.4 x 35mm Square Twist Nails - LOOSE	500

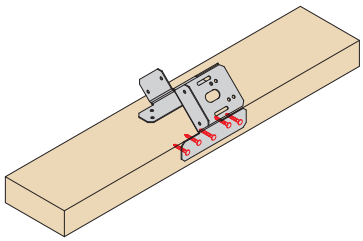
ACE-61-100	58	97

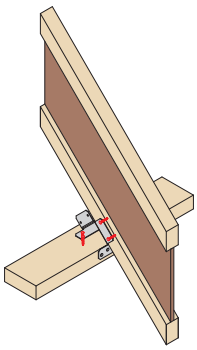
Installation Instructions

STAGE 1



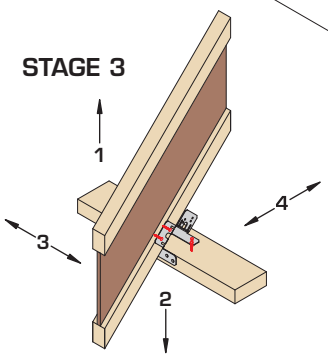
Position the ACE to the outside of the wall plate and nail to the face with 5No 3.4 x 35mm square twist nails.

STAGE 2



Position the I-Joist rafter and fix into the bottom flange with 2No 3.4 x 35mm square twist nails. On the same side fix into the top of the wall plate with 2No 3.4 x 35mm square twist nails.

STAGE 3



On the opposite side the ACE should be wiped up and nailed into the bottom flange with 2No 3.4 x 35mm square twist nails.

An additional 2No 3.4 x 35mm square twist nails should be fixed into the top of the wall plate.

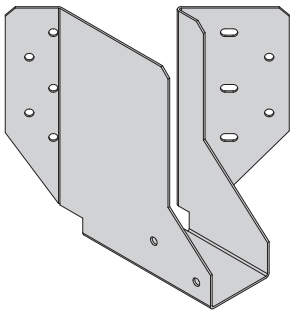
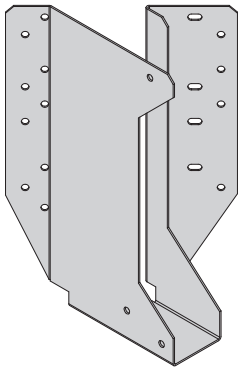
45L/R

Face Fix 45° Hanger



170mm Deep



220 - 300mm Deep

Left hand version shown

The 45L/R is a pre-skewed 45 degree hanger for timber to timber connections.

Features & Benefits

— Economical solution provides set angle for ease of installation

Material Specification

— Galvanised mild steel - Z275

Fixings

UZ CLIP

Noggin Support

Load Data

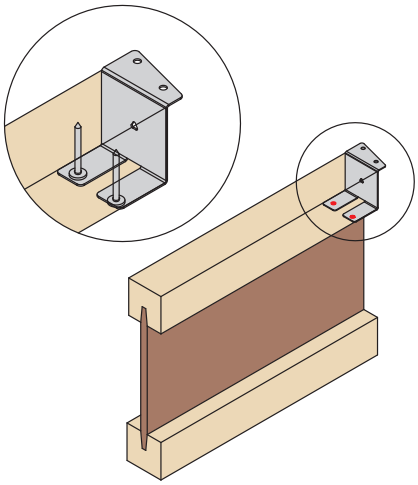
Noggin Type	Fixings (3.4 x 35mm)		Safe Working Loads (kN)	Characteristic Capacity (kN)
	Header	Incoming	Short Term	
Solid Timber	2	3	1.50	2.28
I-Joist	2	2	1.50	2.73

Installation Instructions

STAGE 1

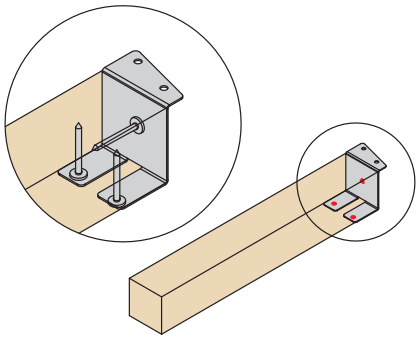
I-Joist Noggin

Fix UZ Clip to underside of I-Joist top flange with 2No 3.4 x 35mm square twist nails.



Solid Timber Noggin <50mm Wide

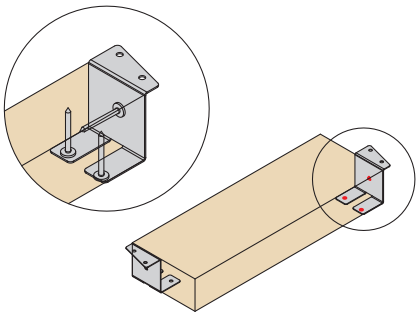
Fix UZ Clip to underside of noggin with 2No 3.4 x 35mm square twist nails. An additional 1No 3.4 x 35mm square twist nail is required in the timber end.



Solid Timber Noggin >50mm Wide

Fix UZ Clip to underside of noggin with 2No 3.4 x 35mm square twist nails. An additional 1No 3.4 x 35mm square twist nail is required in the timber end.

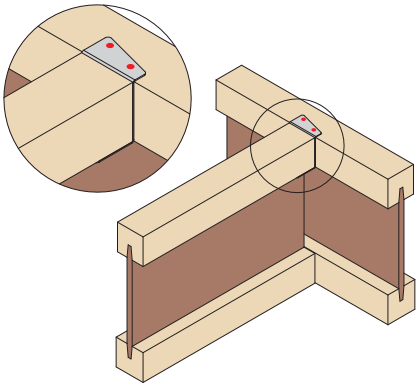
UZ Clips should be staggered.



STAGE 2

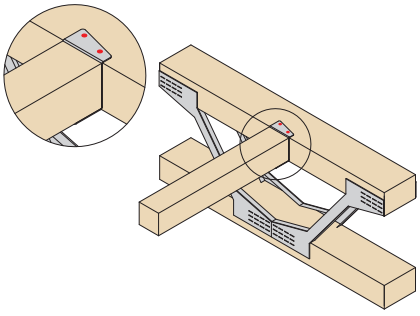
I-Joist Noggin

Nail the UZ Clip to the top of the header joist with 2No 3.4 x 35mm square twist nails.



Solid Timber Noggin <50mm Wide

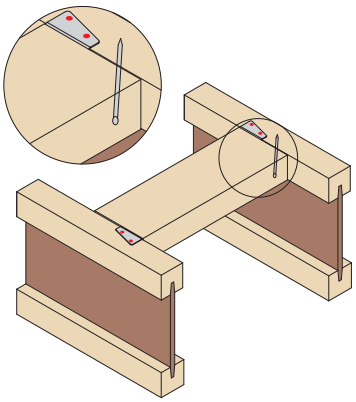
Nail the UZ Clip to the top of the header joist with 2No 3.4 x 35mm square twist nails.



Solid Timber Noggin >50mm Wide

Nail the UZ Clip to the top of the header joist with 2No 3.4 x 35mm square twist nails.

A skew nail fixing will be required on the opposite side (approx. 75mm long).

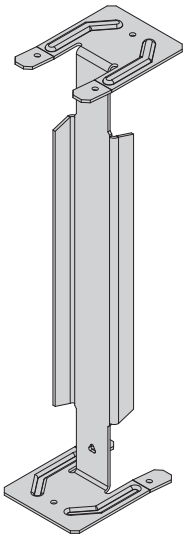


I-CLIP

Multiple I-Joist Connector

ETA - 08/0371

GB Patent: 2411216



The I-Clip is a single piece connector for joining multiple I-Joists together eliminating the need for filler blocks.

Features & Benefits

- Quick and simple to install with flared end for ease of install
- Safely joins joists together allowing them to act as a single unit
- Visible connections to ensure compliance

Material Specification

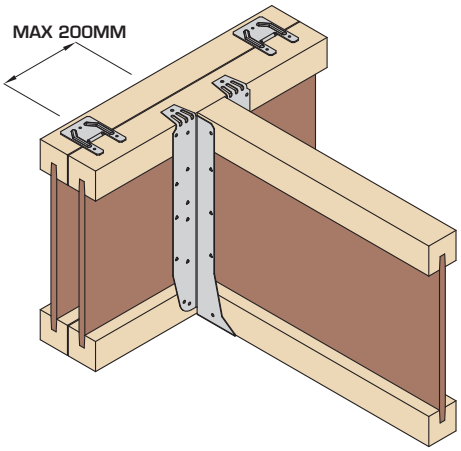
- Galvanised mild steel - Z275

Fixings

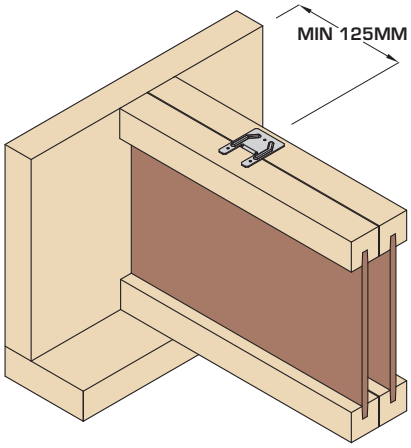
Code	Description	Box Qty
547389	3.4 x 35mm Square Twist Nails - LOOSE	500
141185	3.4 x 35mm Square Twist Nails - COLLATED*	2,500

*For use with Paslode PPN35Ci

In Situ



Installation either side of incoming point load to be maximum 200mm from joist edge.



Installation on joist end to be minimum 125mm away from the end of the joist to allow adequate space for fixing.

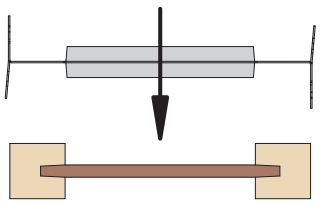
*Please contact Technical Support for guidance on 3 ply connections.

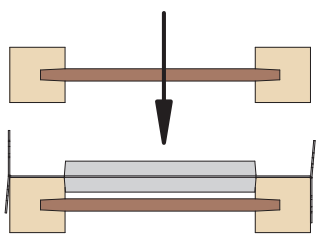
Installation Instructions

STAGE 1



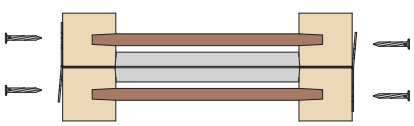
Lay I-Joist flat and mark location of I-Clips, press clips into position on top face of I-Joist.

STAGE 2



Position second ply of multiple joist on top of I-Clips and tap together with a hammer to ensure a tight fit.

STAGE 3

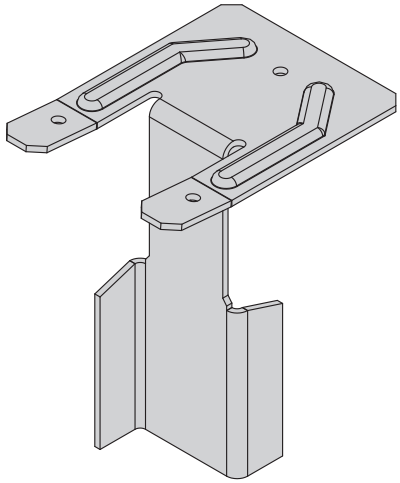


Fix I-Clips to top and bottom flanges of multiple I-Joist using 6No 3.4 x 35mm square twist nails ensuring that I-Joists are fitted tightly together.

OW-CLIP

Multiple Joist Connector

European Community Registered Design



The OW-Clip enables the connection of 2 ply joists allowing them to act as a single unit.

Features & Benefits

- One part can be used for all joist depths and widths
- Flared end for ease of install
- Visible connections to verify compliance

Material Specification

- Galvanised mild steel - Z275

Multiple Connections

EN 4592

The Paslode Structural Screws are for use in various applications in timber frame where multiple members are required; typically trimmer joists, multiple floor joists, lintels and multiple girders.

Features & Benefits

- Requires no pre-drilling
- Quick and easy to install
- Higher lateral load capacity than nails or screws of similar diameter
- Upgraded to improve withdrawal and shear load capabilities, increase speed of installation and to meet the design requirements of Eurocode 5
- Large diameter flanges under heads ensure very high resistance to pull-through loads

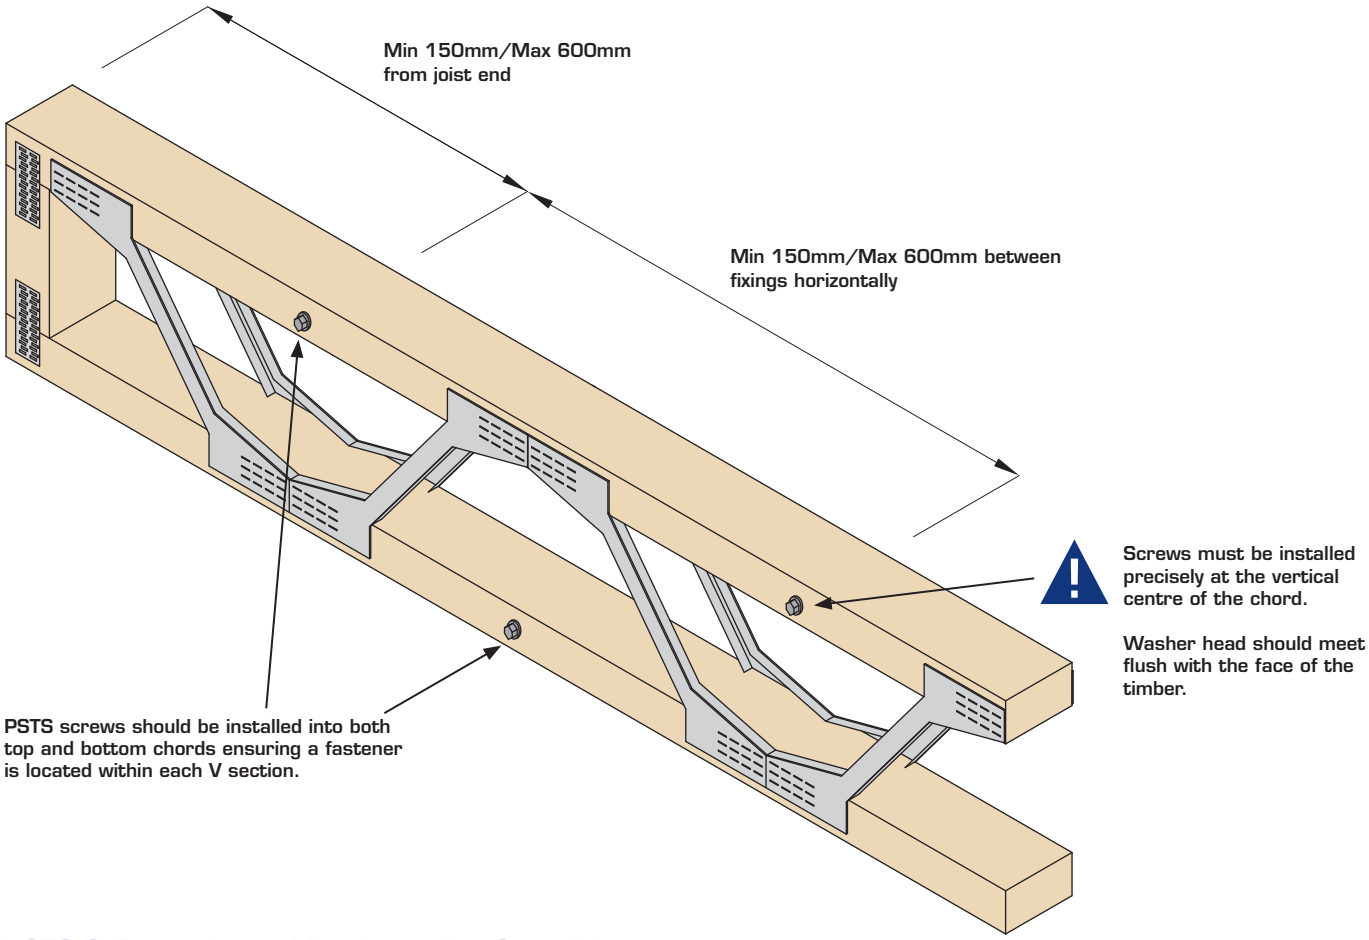
1. All data included is based on tests in accordance with EN14592.
2. Paslode Structural Tests are CE marked in accordance with EN14592 following testing at TRADA Technology. For applications outside the scope of those specified please contact our Technical Department.

Connecting Multiple Open Web Joists With PSTS 6.5mm Ø



PSTS 6.5mm - Lateral Load-carrying Capacities

Long-term permissable lateral load for a single Paslode STS 6.5mm for common 2-ply Open Web connections.

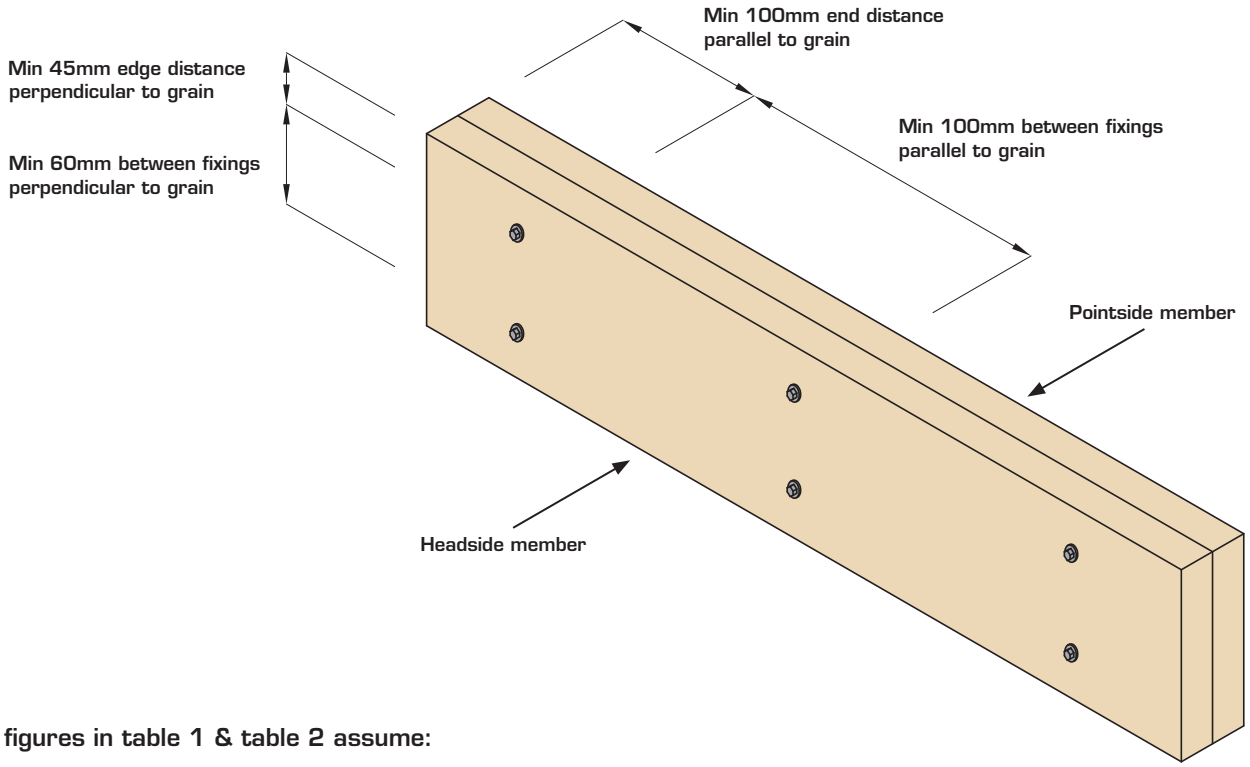
Open Web Connection - Fasteners to Top & Bottom Chords*	Length of Paslode STS 6.5mm	Long-Term Permissable Lateral Load-Carrying Capacity (kN) Per Fixing	Characteristic Capacity (kN) Per Fixing
2-ply 72mm wide Open Web Joists	115	0.75	2.28
2-ply 97mm wide Open Web Joists	150	0.75	2.28
2-ply 122mm wide Open Web Joists	200	0.60	1.65
2-ply 147mm wide Open Web Joists	250	0.60	1.65

*This table assumes top and bottom chords of TR26 timber.

PSTS

Multiple Connections

Connecting Multiple Glulam & Solid Timber Members With PSTS 6.5mm Ø



The figures in table 1 & table 2 assume:

1. The load may be acting parallel or perpendicular to the grain.
2. Minimum pointside penetration of 25mm for Glulam members (Table 1).
3. Minimum pointside penetration of 30mm for solid timber members (Table 2).

PSTS 8.0mm - Lateral Load-carrying Capacities - Glulam (Table 1)

Long-term permissable lateral load for a single Paslode STS 8.0mm for common combinations of 2 member joints in Glulam (GL28).

Thickness of Headside Member (mm)	Thickness of Pointside Member (mm)	Length of Paslode STS 8.0mm	Long-Term Permissable Lateral Load-Carrying Capacity (kN) Per Fixing Safe Working Load	Long-Term Permissable Lateral Load-Carrying Capacity (kN) Per Fixing Characteristic Capacity
38	38	65	0.90	2.18

45	45	85	1.13	2.72
47	47	85	1.12	2.69
75	75	135	1.38	3.32

PSTS

Multiple Connections

PSTS Procedure For Designing Connections of Multiple Girder Roof Trusses

Maximum Return Spans of Incoming Trusses For A Range of PSTS 8.0mm Spacings

Table 1 - Maximum Return Spans of Trusses Spanning Onto 2-Ply Girder Trusses

Size of Bottom Chord Members of Girder Truss (mm)	Length of Paslode STS 8.0mm	Maximum Return Spans (m) of Incoming Trusses for Paslode STS 8.0mm Spacings (S) of:					
		100mm	150mm	200mm	300mm	400mm	600mm
35 x 72, 35 x 84	65mm	N/A	7.1	5.1	3.2	2.2	N/A
35 x 97	65mm	N/A	9.1	6.6	4.2	2.9	1.7
35 x 122, 35 x 147, 35 x 172	65mm	11.0	9.1	6.6	4.2	2.9	1.7
47 x 72, 47 x 84	85mm	N/A	11.6	8.5	5.4	3.9	2.3
47 x 97	85mm	N/A	14.7	10.8	7.0	5.0	3.1
47 x 122, 47 x 147, 47 x 172, 47 x 197, 47 x 220	85mm	15.0	14.7	10.8	7.0	5.0	3.1

Table 2 - Maximum Return Spans of Trusses Spanning Onto 3-Ply Girder Trusses

Size of Bottom Chord Members of Girder Truss (mm)	Length of Paslode STS 8.0mm	Maximum Return Spans (m) of Incoming Trusses for Paslode STS 8.0mm Spacings (S) of:					
		100mm	150mm	200mm	300mm	400mm	600mm
35 x 72, 35 x 84	100mm	N/A	5.1	3.7	2.2	1.5	N/A
35 x 97	100mm	N/A	6.1	4.8	2.9	2.0	N/A
35 x 122, 35 x 147, 35 x 172	100mm	10.3	6.6	4.8	2.9	2.0	N/A
47 x 72, 47 x 84	135mm	N/A	18.5	6.2	3.9	2.7	1.6
47 x 97	135mm	N/A	10.8	7.9	5.0	3.6	2.1
47 x 122, 47 x 147, 47 x 172, 47 x 197, 47 x 220	135mm	15.0	10.8	7.9	5.0	3.6	2.1

Notes

- The return spans of tables 1 & 2 presume that the bottom chords of the girder trusses are strength class TR26 timber
- The return spans of tables 1 & 2 presume that the Paslode STS 8.0mm are inserted into the girder trusses in accordance with the fastener layouts of Figures 1-4
- For 44mm thick timbers the tabulated return spans given for 47mm thick timbers may be used
- Where plain concrete tiles (maximum top chord deal load of 0.88kN/m² on slope) are used instead of interlocking concrete tiles, then tabulated return spans should be multiplied by 0.9

Design Assumptions

The connection details given are applicable to trusses with pitches between 15° and 45° and supporting the following loadings:

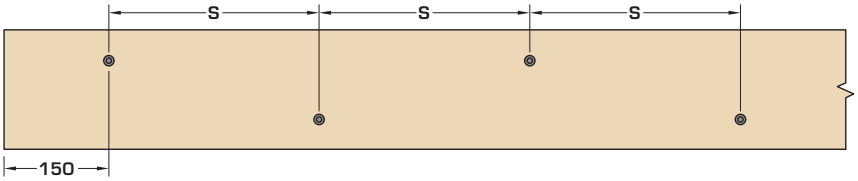
Top Chord Dead Load (kN/m² on slope)		0.685
Top Chord Imposed (snow) Load (kN/m² plan)	For Pitches ≤30°	0.75
	For Pitches >30°	0.75 [(960 - pitch) / 30]
Bottom Chord Dead Load (kN/m²)		0.25
Bottom Chord Imposed (storage) Load (kN/m2) - Water Tank Loads as BS5268-3		0.25

PSTS

Multiple Connections

Layout of Paslode STS 8.0mm In Bottom Chords

Figure 1 - Bottom Chords Depths of 72mm, 84mm or 97mm



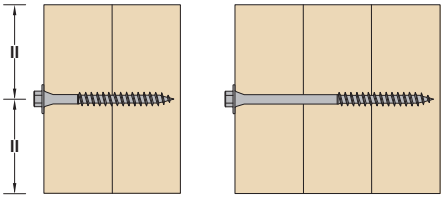


Figure 2 - Bottom Chords Depths of 122mm, 147mm, 172mm, 197mm or 222mm

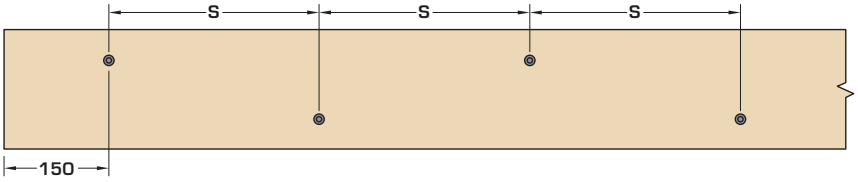
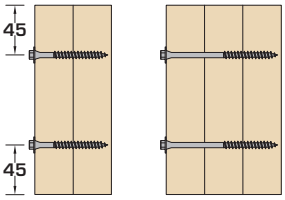
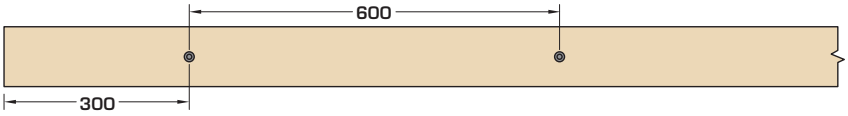




Layout of Paslode STS 8.0mm In Webs & Top Chords

Figure 3 - Top Chords/Webs of Depths 72mm, 84mm or 97mm



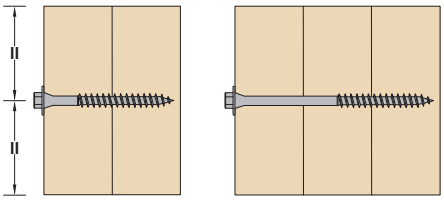


Figure 4 - Top Chords/Webs of Depths 122mm, 147mm, 172mm, 197mm or 222mm

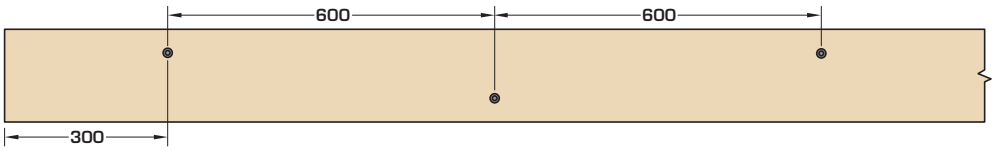
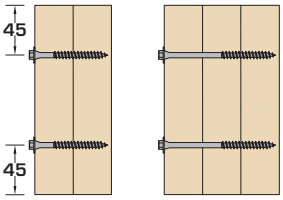


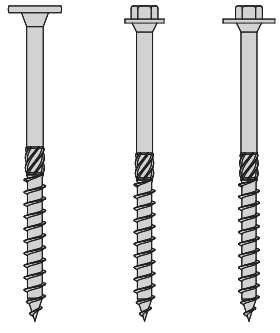


FASTENERS CAN BE INSTALLED FROM ONE SIDE OF GIRDER TRUSS
Except when connecting 4-ply, which must be connected from both sides.

For further information please contact Technical Support.

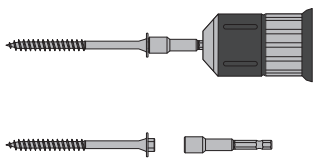
Installation Instructions

STAGE 1



Select the correct fastener type and size.

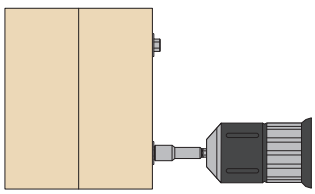
STAGE 2



Install using an impact driver.

(One hex driver bit is included in every box)

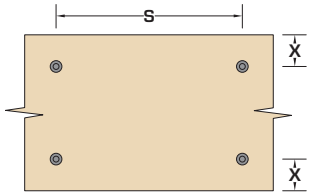
STAGE 3



Bring the underside of the washer head flush with the timber surface.

Do not countersink or overdrive.

STAGE 4



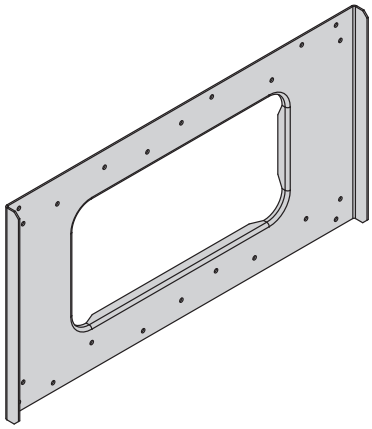
Always maintain the required minimum edge distance and spacing.

These values vary - please refer to relevant details.

SHI

Service Hole I-Joist

GB Patent: 2496059B



The SHI plate is a reinforcement plate that allows large apertures to be cut into an I-Joist web to accommodate service runs.

Features & Benefits

- Allows larger apertures to be cut into I-Joist web whilst providing additional strength and stiffness to the I-Joist
- Potential remedial solution for damaged webs (Contact your system provider for further information)

Material Specification

- Galvanised mild steel - Z275

Fixings

Code	Description	Box Qty
547389	3.4 x 35mm Square Twist Nails - LOOSE	500
141185	3.4 x 35mm Square Twist Nails - COLLATED*	2,500

*For use with Paslode PPN35Ci

Available Sizes

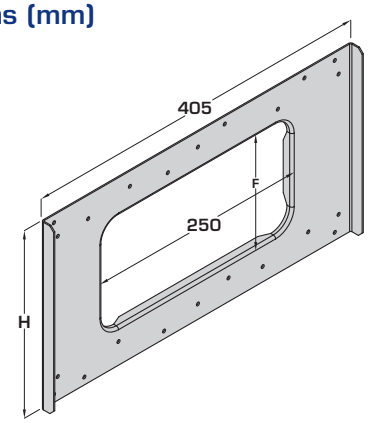
Product Code	Product Description	I-Joist Depth (mm)	Dimensions (mm)	
			H	F
548377	SHI-220-1	220	215	127
548380	SHI-240-1	240/245	240	152
548381	SHI-300-1	300	300	207

Suitable for use with JJI (45mm flange), SJI (45mm flange), MJI (45mm flange) and FJI (39mm flange). Contact Technical Support for use with multiple ply members.

The use of SHI plates must be assessed for suitability by a qualified design professional.

Please contact your system provider for further information on assessing joist suitability.

Dimensions (mm)



In Situ

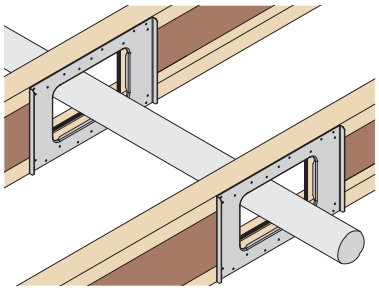


Plate required each side of aperture.

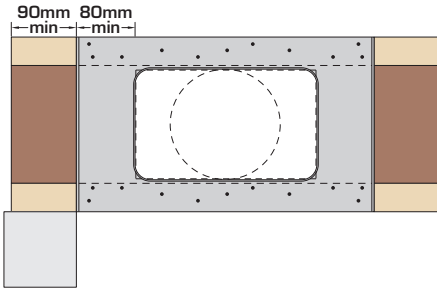
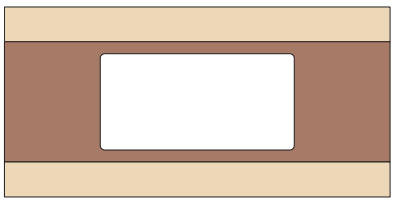


Position SHI plate at least 90mm from joist end to ensure it does not clash with masonry hanger or end seal (suitable for use with Hi-Vis Gripper).

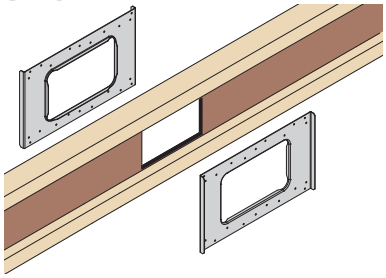
Installation Instructions

STAGE 1



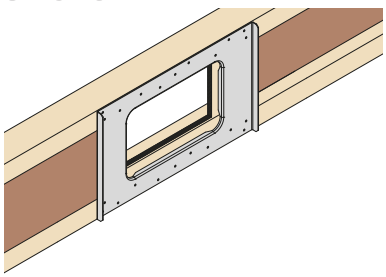
Using the SHI plate as a template, drill 4No holes and cut inner aperture to suit.

STAGE 2



Place 1No SHI plate either side of the aperture.

STAGE 3



Fix the SHI plates to the I-Joist with 22No 3.4 x 35mm square twist nails per plate.

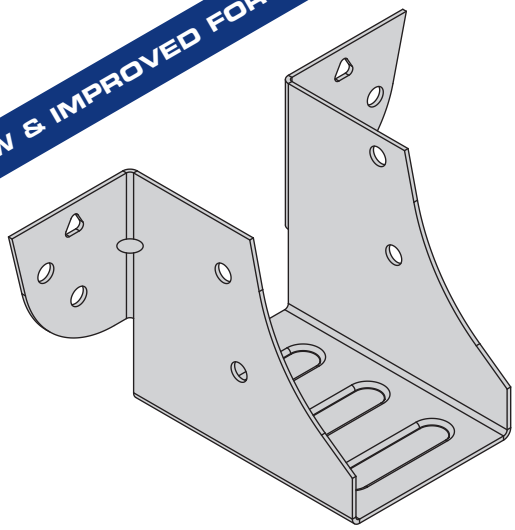
COMPACT SOLUTIONS

KM

Mini Hanger

NEW & IMPROVED FOR 2017



The KM hanger is used to support joists and trusses where a compact economical connector is required.

Features & Benefits

- New and improved design achieves higher load carrying capacities
- Additional side fixings allow for increased uplift capacity
- Optional triangular holes for increased performance on solid headers
- Rear location tab to assist with installation

Material Specification

- Galvanised mild steel - Z275

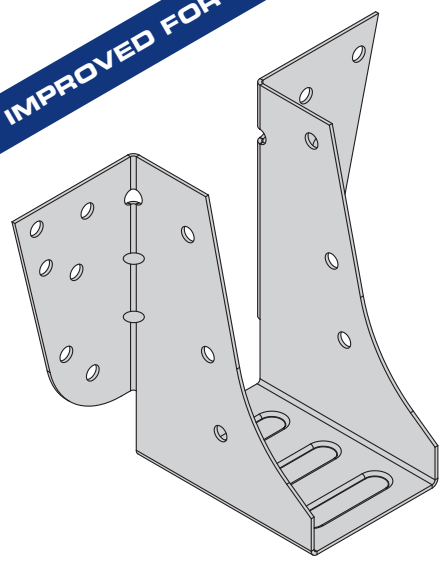
TM

Midi Shoe

NEW & IMPROVED FOR 2017



The TM hanger is used to support trusses in lower load applications from bottom chord depths 97mm and above.

Features & Benefits

- New and improved design achieves higher load carrying capacities
- Additional side fixings allow for increased uplift capacity
- Rear location tab to assist with installation
- Economical solution for lower load applications

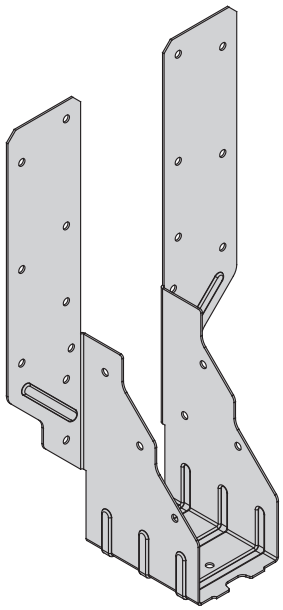
TS

Truss Shoe

ETA - 16/0009



The TS hanger is designed to support trussed rafters from primary girders.

Features & Benefits

- 4 sizes available to suit standard single or double trussed rafters
- Allows design loading to be effectively transferred without local over stressing
- The high performance nail configuration minimises any direct deflection or rotation caused by the incoming truss not abutting the primary girder

Material Specification

- Galvanised mild steel - Z275

Fixings

Code	Description	Box Qty
547389	3.4 x 35mm Square Twist Nails - LOOSE	500

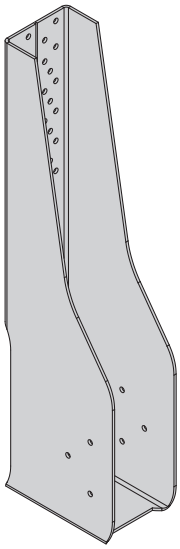
HGG

Heavy Girder To Girder

NEW & IMPROVED FOR 2017



The HGG hanger is designed to support multiple ply girder trusses from a vertical web in high load situations.

Features & Benefits

- New and improved design using PSTS screws simplifies the installation
- Allows fixings into vertical web only
- Additional side fixings allows for greater uplift capacity

Material Specification

- Galvanised mild steel - Z275

Fixings

40No Paslode PSTS 6.5 x 65mm supplied with hanger

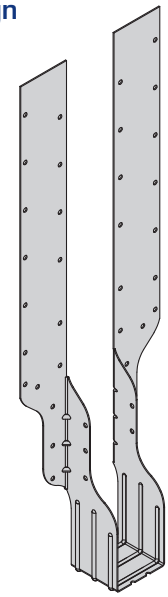
KHL

Kwiki Hanger Long Leg

The KHL hanger is a long leg hanger designed for simple solid timber to timber connections.

European Community Registered Design

ETA - 16/0009



Features & Benefits

— Adjustable leg length accommodates varying timber depths

— Solution for dropped/underslung applications

Material Specification

— Galvanised mild steel - Z275

Fixings

Code	Description	Box Qty

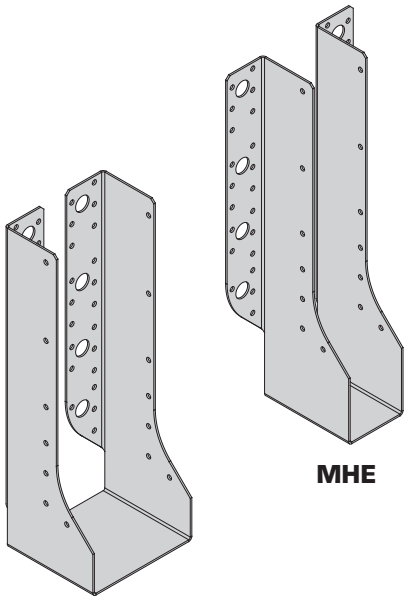
MH RANGE

Multi Hanger



MHE

MHI

MHIC

The MH hanger range is designed to support timber to timber connections in medium to high load situations.

Features & Benefits

- External and internal flange options allow for multifunctional use
- Range of sizes and potential fixing options allows for greater design flexibility
- Partial fixing options available on request. Contact Technical Support.

Material Specification

- Galvanised mild steel - Z275

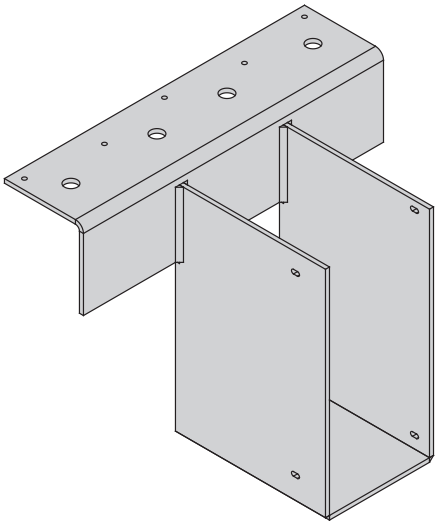
FTHI

Flexible Timber Hanger



The FTHI hanger is designed to support joists, trussed rafters and solid timber members in a top fix only application for high load situations.

Features & Benefits

- Increased top flange to allow for greater load distribution
- Options available for skewed, offset, dropped and straddle connections

Material Specification

- 4mm mild steel with zinc phosphate undercoat with an organic bituminous top coat to BS EN845-1:2013+A1:2016

Fixings

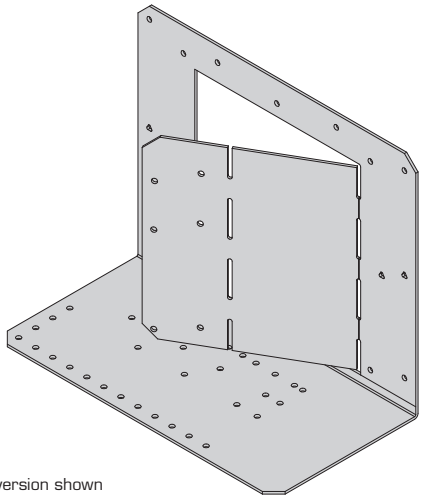
Variable Skewed Timber Hanger

ETA - 08/0371



Right hand version shown

The VS hanger is used to support joists and trusses up to 97mm wide from solid timber members in skewed applications between 30-90°.

Features & Benefits

- Unique hanger design provides a variable skew angle between 30-90°
- No need to mitre cut joists
- Angle scale on base to ease adjustment

Material Specification

- Galvanised mild steel - Z275

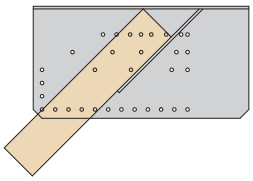
(Depth Dependant Only)	Header	Incoming		Long Term	Medium Term		
135	11	4	2.50	3.35	3.71	2.50	4.30
175, 195, 220	11	6	2.50	4.16	4.75	3.75	5.51

Installation Instructions

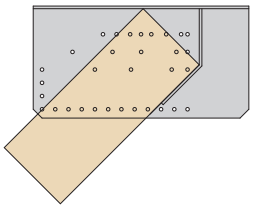
STAGE 1

Adjust side plate to approximate angle between 30° and 90° using scale on base of hanger, bending only once. Please refer to the angle table below to determine if one or two bends are required.

Single Bend



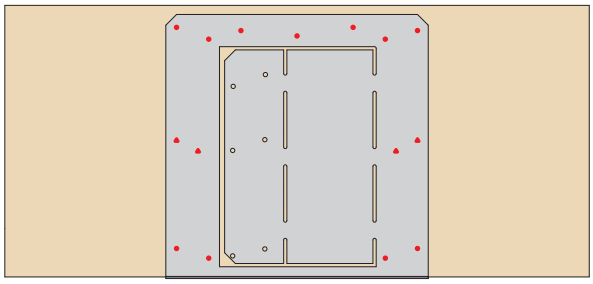
Double Bend



Joist Width (mm)	Single bend	Double Bend
35	n/a	30-90°
38	n/a	30-90°
44	n/a	30-90°
45	n/a	30-90°
47	n/a	30-90°
51	30-32°	>32-90°
53	30-32°	>32-90°
58	30-34°	>34-90°
59	30-34°	>34-90°
60	30-34°	>35-90°
63	30-37°	>37-90°
70	30-39°	>39-90°
72	30-40°	>40-90°
76	30-42°	>42-90°
88	30-46°	>46-90°
89	30-46°	>46-90°
90	30-46°	>46-90°
94	30-48°	>48-90°
97	30-49°	>49-90°

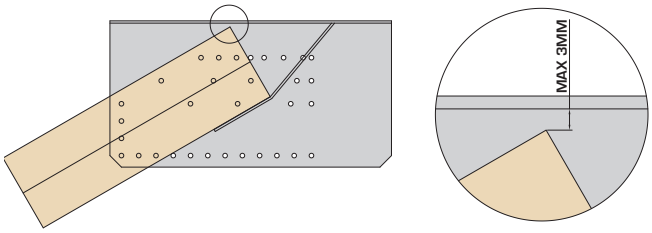
STAGE 2

Position hanger against face of joist/truss and nail using 11No 3.4 x 35mm square twist nails.



STAGE 3

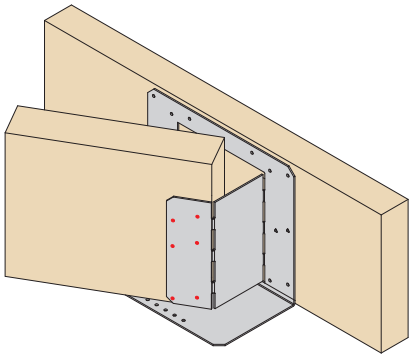
Locate incoming member and adjust side plate to correct angle, ensuring maximum gap between incoming joist/truss and back plate is no greater than 3mm.



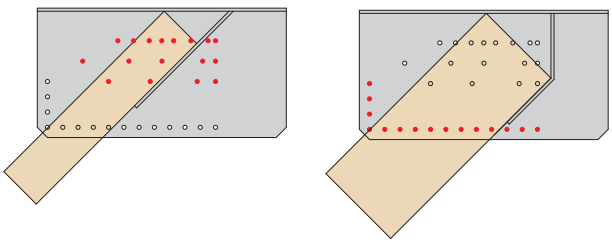
Max - 3mm gap at any given time

STAGE 4

Fix to incoming member using 6No 3.4 x 35mm square twist nails (4No for VS-135).

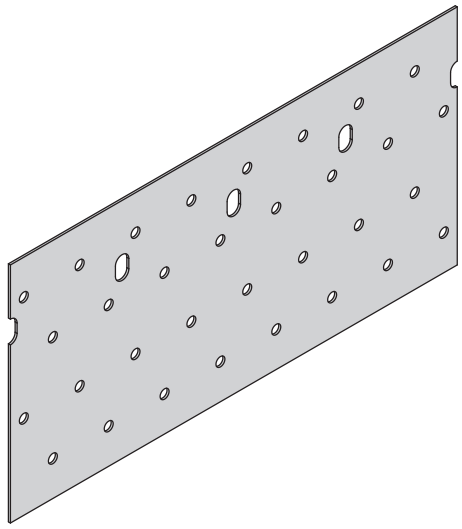


Please ensure that 1No inner nail hole (indicated in red) and 1No outer nail hole (indicated in red) are filled on the underside with 3.4 x 35mm square twist nails.



NP

Nail Plate



The NP nail plate allows the connection of two or more timber members.

Features & Benefits

— Part can be hand nailed on site for truss remedials

Material Specification

— Galvanised mild steel - Z275 - 0.9mm thick

Fixings

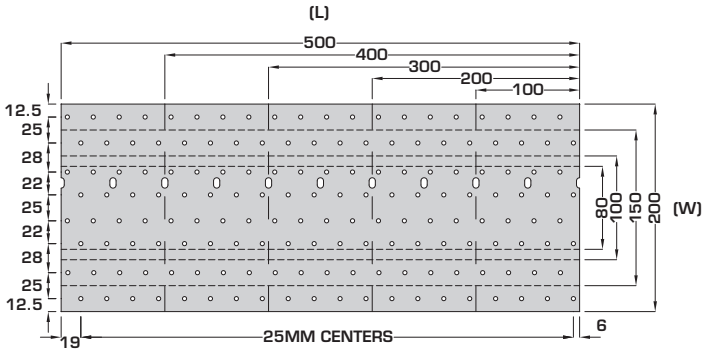
Code	Description	Box Qty
547389	3.4 x 35mm Square Twist Nails - LOOSE	500
141185	3.4 x 35mm Square Twist Nails - COLLATED*	2,500

*For use with Paslode PPN35Ci

Available Sizes

Nail Plate Length (L) (mm)	Nail Plate Width (W) (mm)			
	80	100	150	200
100	NP-80-100	NP-100-100	NP-150-100	-
200	NP-80-200	NP-100-200	NP-150-200	NP-200-200
300	NP-80-300	NP-100-300	NP-150-300	NP-200-300
400	NP-80-400	NP-100-400	NP-150-400	NP-200-400
500	NP-80-500	NP-100-500	NP-150-500	NP-200-500

Dimensions (mm)

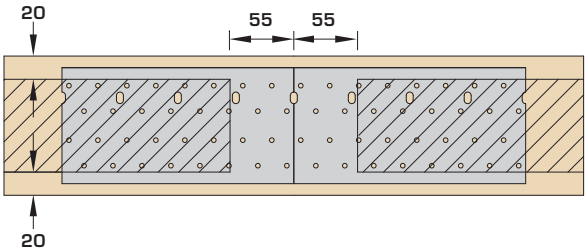


In Situ

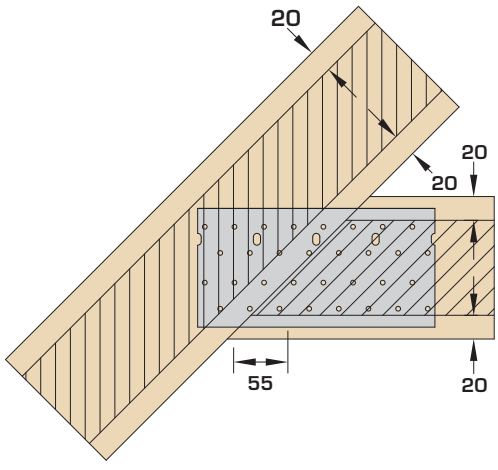
— Timber to timber joints for use in trussed rafter roofs must be designed in accordance with BS5268-2:2002 & BS5268-3:2006

— Nails must meet edge distance requirements to have load carrying capacity

— A nail plate should be positioned on each side of the joint. Care should be taken to ensure there are equal nails fixed from each side and no nail clashes



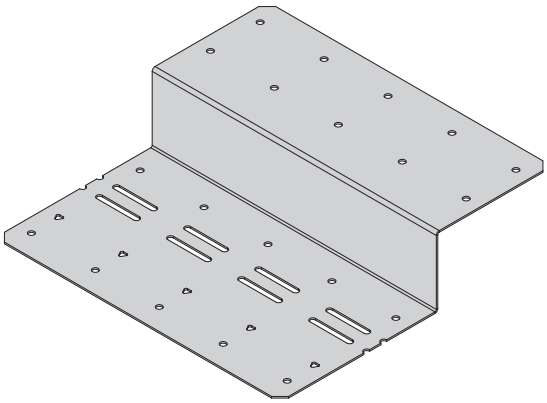
BUTT JOINTS



HEEL JOINTS

SB

Support Bracket



The SB support bracket is used to form a connection between timber bracing shelves and the adjacent trussed rafters.

Features & Benefits

— Unique design allows one part to accommodate any rafter width

— Can be connected to timber shelf at ground floor level to ease with installation

Material Specification

— Galvanised mild steel - Z275

Fixings

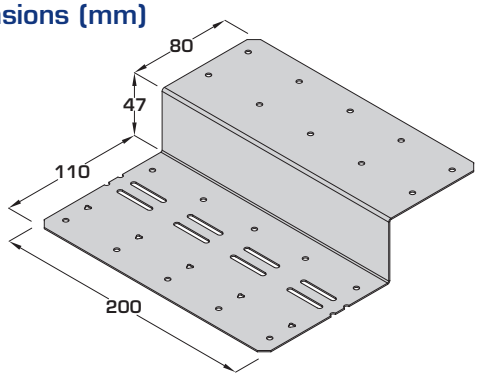
Code	Description	Box Qty
547389	3.4 x 35mm Square Twist Nails - LOOSE	500
141185	3.4 x 35mm Square Twist Nails - COLLATED*	2,500

*For use with Paslode PPN35Ci

Available Sizes

Product Code	Min Truss Width (mm)	Max Truss Width (mm)
SB	35	188

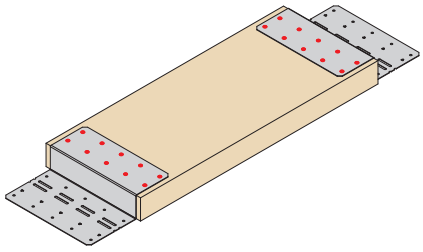
Dimensions (mm)



Installation Instructions

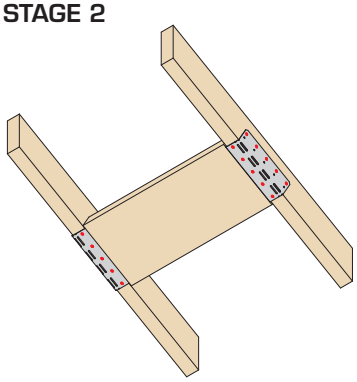
— BS5268-3:2006 (Annex A) states that a bracing solution for roof spans up to 17m requires steel support bracket to form a connection between the timber bracing shelves and adjacent rafters (Refer to standard for fixing diagonal bracing to bracing shelf)

STAGE 1



Nail support bracket to timber bracing shelf (min C16 grade) with 10No fixings per bracket (3.4 x 35mm square twist nails).

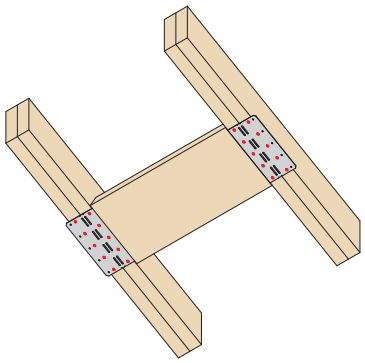
STAGE 2



Single Rafter

Position timber bracing shelf in-between rafters and nail to underside with 5No fixings per bracket (3.4 x 35mm square twist nails).

Wipe the support bracket round the rafter and nail into the side of the rafter with 5No fixings per bracket (3.4 x 35mm square twist nails).



Multiple Rafters

Position timber bracing shelf in-between rafters and nail to underside with 10No fixings per bracket (3.4 x 35mm square twist nails).

TC

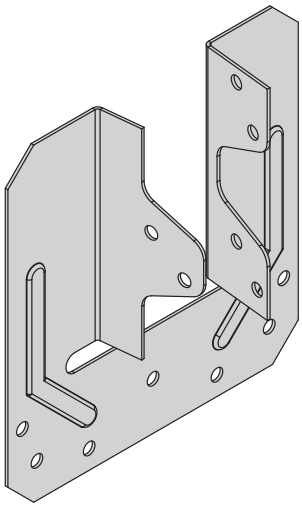
Truss Clip

ETA - 16/0009



The TC is our standard truss clip for securing trussed rafters to single wall plates.

Features & Benefits

— Eliminates damage from skew nailing into the wall plate

Material Specification

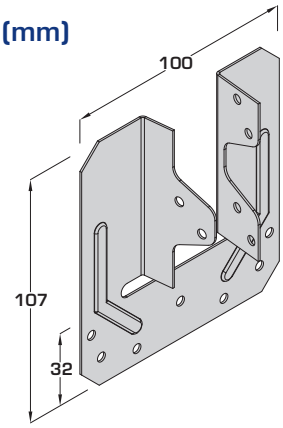
— Galvanised mild steel - Z275

Fixings

Code	Description	Box Qty
547389	3.4 x 35mm Square Twist Nails - LOOSE	500
141185	3.4 x 35mm Square Twist Nails - COLLATED*	2,500

*For use with Paslode PPN35Ci

Dimensions (mm)

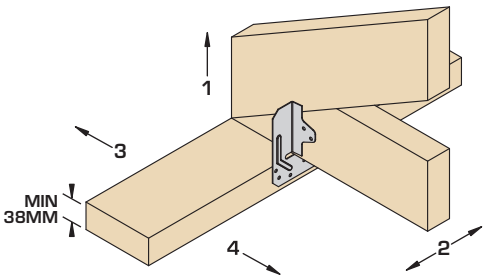


Available Sizes

Product Code	Truss Width (mm)
TC-38	35
TC-50	44-47

In Situ

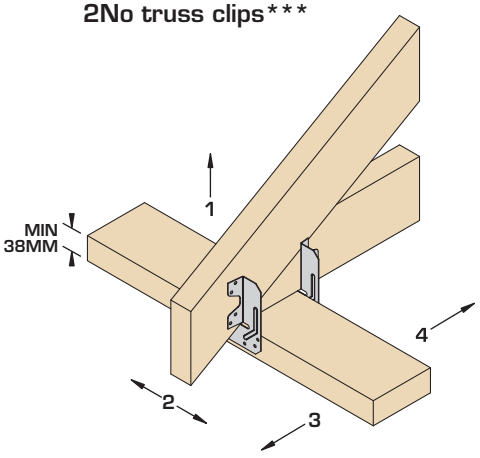
1No truss clip***



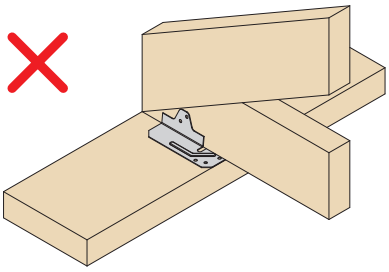
***Also suitable to fix to the outside of the wall plate depending on truss heel detail.

(Plates omitted for clarity)

2No truss clips***



Incorrect Installation



Do not install truss clips horizontally onto the wall plate

Load Data

Product Code	Fixings (3.4 x 35mm)		Safe Working Loads (kN)		Characteristic Capacity (kN)

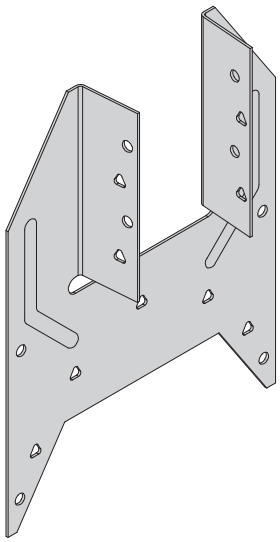
			4	0.45 (1.74**)	1.67 (2.37**)

**Values for 2No truss clips.

TA

Truss Anchor

ETA - 16/0009



The TA secures trussed rafters to 2 ply wall plates or head binders whilst providing a positive fixing on two planes.

Features & Benefits

- Eliminates damage from skew nailing into the wall plate
- "Push on" fit allows truss anchor to be retained in position prior to nailing
- Optional triangular nail holes for enhanced performance

Material Specification

- Galvanised mild steel - Z275

Fixings

Code	Description	Box Qty
547389	3.4 x 35mm Square Twist Nails - LOOSE	500

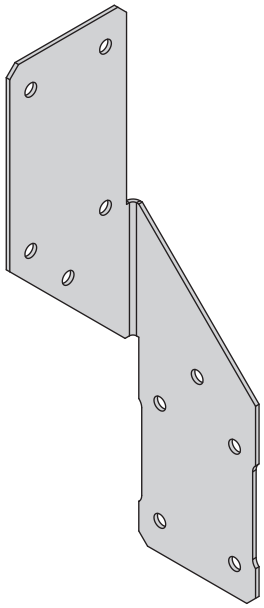
				4	1.11 (2.40**)	2.19 (4.29**)

**Values for 2No truss anchors

TA-1

Framing Anchor

ETA - 16/0009



The TA-1 provides a positive connection on two planes without encroaching into the internal space.

Features & Benefits

— Eliminates damage from skew nailing

— Single anchor means the part is not width dependant

Material Specification

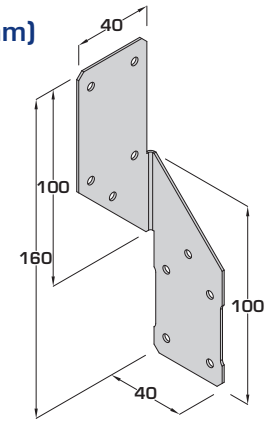
— Galvanised mild steel - Z275

Fixings

Code	Description	Box Qty
547389	3.4 x 35mm Square Twist Nails - LOOSE	500
141185	3.4 x 35mm Square Twist Nails - COLLATED*	2,500

*For use with Paslode PPN35Ci

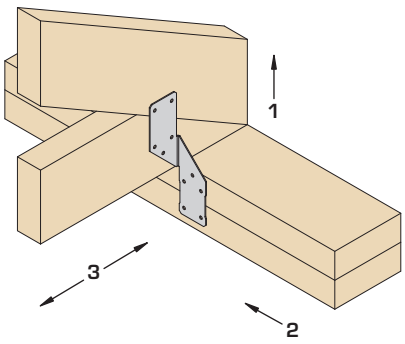
Dimensions (mm)



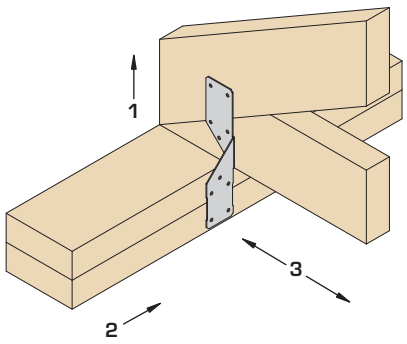
In Situ

Double wall plate required for all installations (min 75mm) unless using in a timber frame application where the framing anchor can be fitted to the head binder.

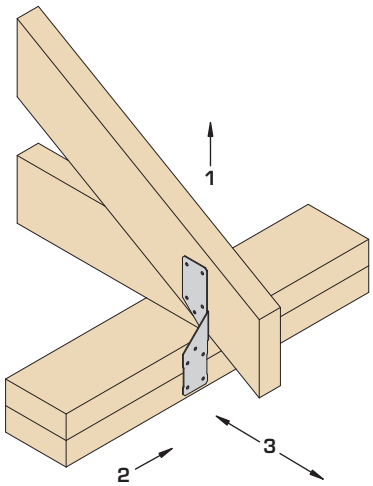
1No TA-1 standard installation**



1No TA-1 installed to opposite side**



1No TA-1 installed to outer face**



**Also suitable to fix to the outside of the wall plate depending on truss heel detail.

(Plates omitted for clarity)

Load Data

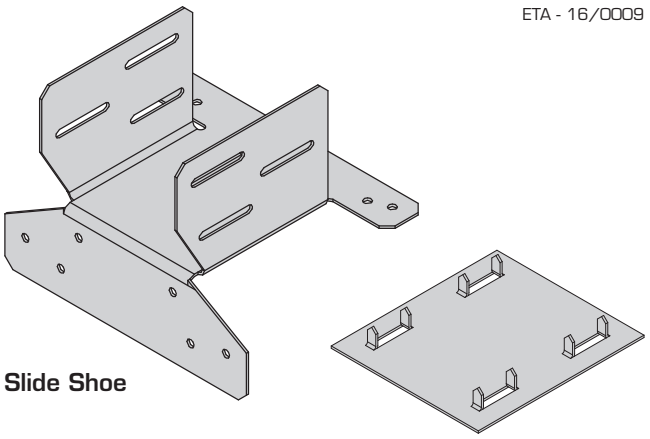
			2	0.88	1.55
			3	1.10	1.84

All values are per anchor.

SS

Slide Shoe

ETA - 16/0009



Slide Shoe

Plate (Supplied with SS)

The SS allows for a secure fixing and horizontal movement between raised tie/scissor trusses and the wallplate.

Features & Benefits

— Provides a maximum of 26mm lateral movement without compromising its resistance to uplift

Material Specification

— Galvanised mild steel - Z275

Fixings

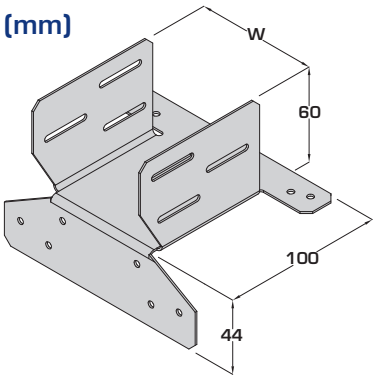
Code	Description	Box Qty
547389	3.4 x 35mm Square Twist Nails - LOOSE	500
141185	3.4 x 35mm Square Twist Nails - COLLATED*	2,500

*For use with Paslode PPN35Ci

Available Sizes

Product Code	Truss Width (mm)	Hanger Width (W) (mm)
SS-38	35	38
SS-50	47	50
SS-75	70 (2 ply 35)	75
SS-100	94 (2 ply 47)	100
SS-150	141 (3 ply 47)	150
SS-200	188 (4 ply 47)	200

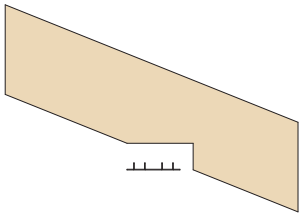
Dimensions (mm)



Installation Instructions

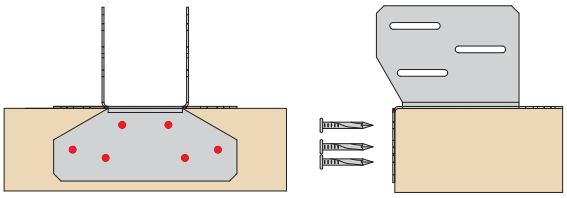
Typically used on one or both ends of the truss as determined by the Truss Designer.

STAGE 1



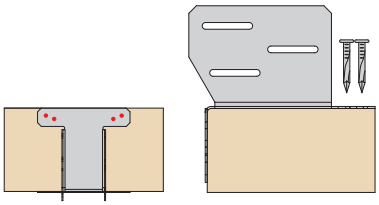
Tap bearing plate into position on underside of truss bearing area

STAGE 2



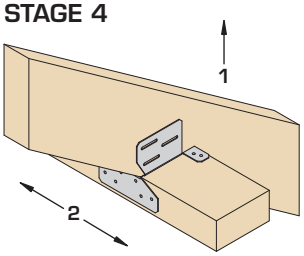
Position the slide shoe on the wall plate and nail to either face with 6No 3.4x35mm square twist nails

STAGE 3



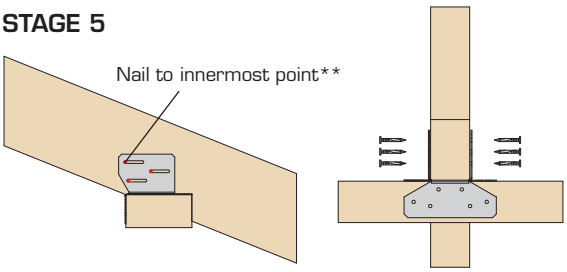
Nail to the top of the wall plate with 4No 3.4x35mm square twist nails

STAGE 4



Locate truss in position

STAGE 5



Nail through side flanges into the rafter with 6No 3.4x35mm square twist nails

**Allows the rafter to deflect and therefore there is no horizontal thrust transferred into the wall head

Load Data

Product Code	Fixings (3.4 x 35mm)		Safe Working Loads (kN)		Characteristic Capacity (kN)
			Load Direction	Solid Timber Header (Min TR26) Short Term	Solid Timber Header (Min TR26)

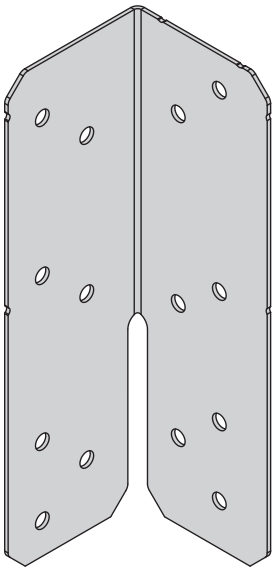
			2	1.61	2.60

FAS

Framing Anchor

ETA - 16/0009



The FAS is an adjustable connector for providing a positive fixing on two planes.

Features & Benefits

— Eliminates damage from skew nailing

— Adjustable bend to accommodate various applications

Material Specification

— Galvanised mild steel - Z275

Fixings

Code	Description	Box Qty

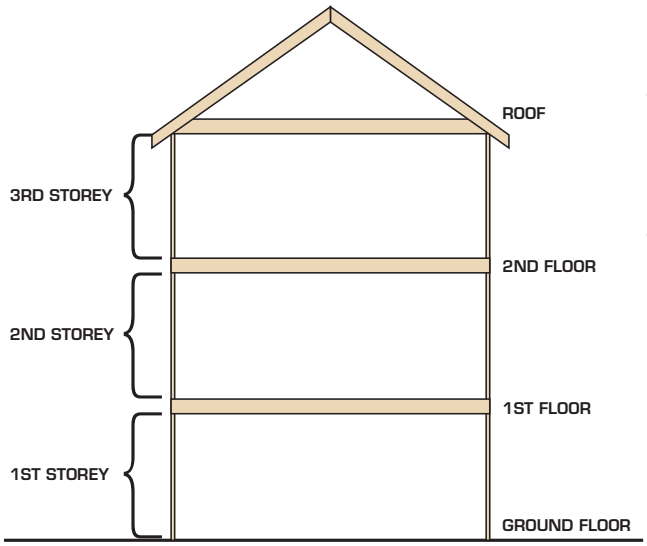
MISC

Restraint Straps (Domestic Roofs)



3 STOREY HOUSE

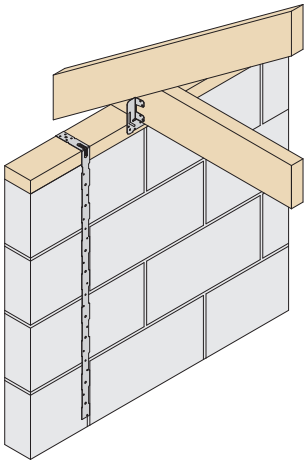
Lateral restraint of the walls can be provided by the roof, the restraint must be provided perpendicular to the roof trusses.

The information we provide has been compiled using the minimum requirement from Building Regulations 2010 approved document A, Scottish Building regulation domestic, NHBC standards and British Standard BS 5628-1;2005 Annex D.

These have been issued as guidance only, the overall responsibility lies with the Building Designer.

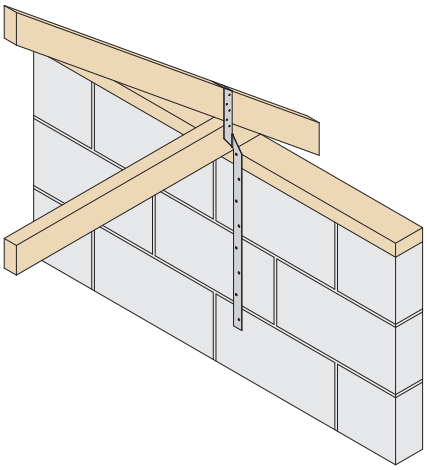
VERTICAL RESTRAINT

Bent Strap To Wall Plate



Fix VRS or LDGS to the wall plate with 2No 3.4 x 35mm square twist nails. Fixings into masonry to be specified by building designer.

Twisted Strap To Truss



RST strap to be nailed to truss with 3.4 x 35mm square twist nails. Nail quantity dependant on uplift value. Fixings into masonry to be specified by building designer.

HORIZONTAL RESTRAINT (MASONRY & TIMBER GABLES)

Detail	Region	Floor Level		
		Up to and including 2 storeys	3 storeys	4 storeys
Perpendicular	England & Wales	PFS or HDGS or RST* required at 2m max centres		PFS or HDGS or RST* required at 1.25m max centres
	Scotland	PFS or HDGS or RST* required at 2m max centres	PFS or HDGS or RST* required at 1.25m max centres	

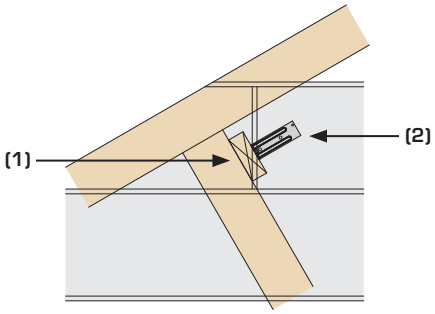
*For timber gables

- Straps to be installed at not more than 2m centres (or 1.25m where appropriate) along gable end.
- Strap to be of sufficient length to be fixed to a minimum of 3no. Trusses.
- Longitudinal bracing to be fixed to each truss with 2no. 3.35 x 65mm round wire nails (in all details 3.1 x 90mm long mechanically driven nails may be substituted for 3.35 x 65mm long wire nails).
- Where the position of the strap does not coincide with an existing longitudinal truss brace, then the strap may be fixed to an additional 25 x 100mm longitudinal binder (as shown in detail X). The binder to be fixed over a minimum of four trusses and fixed to each truss with 2no. 3.35 x 65mm round wire nails.
- Fix straps to longitudinal bracing with 8no. 3.4 x 35mm square twist nails, evenly spaced along the length of the strap (for NHBC warrantied buildings, in accordance with NHBC Standards 2017 section 7.2.8, 8no. 25 x 4mm steel screws shall be used instead of square twist nails).

Restraint Straps (Domestic Roofs)

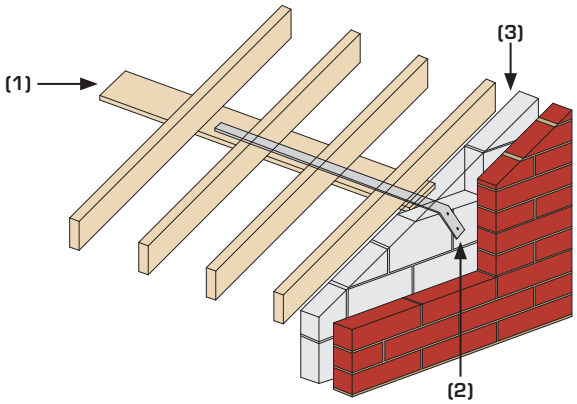
HORIZONTAL RESTRAINT (MASONRY GABLES)

Fixing to Longitudinal Truss Bracing (Fixed to Truss Web)



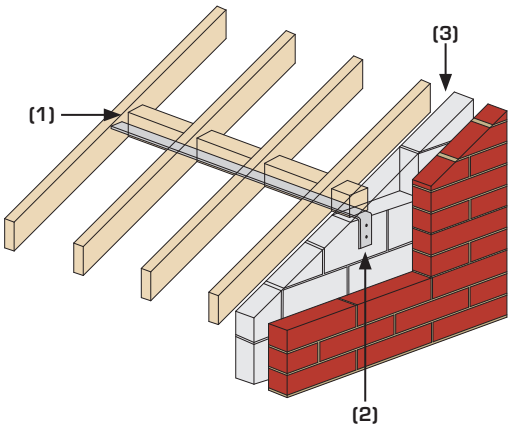
- Install PFS or HDGS on the 25 x 100mm longitudinal truss bracing (1).
- Ensure the position of the longitudinal bracing and strap coincide with the blocks vertical joint.
- The 90deg bend of the strap is to be held tight against the cavity face of the inner leaf of blockwork (2), preferably located on the full block. Notch the blocks to accommodate the angle of the strap and ensure notch is fully mortared.

Fixing to Longitudinal Truss Bracing / Additional Longitudinal Binder (Fixed to Truss Web)



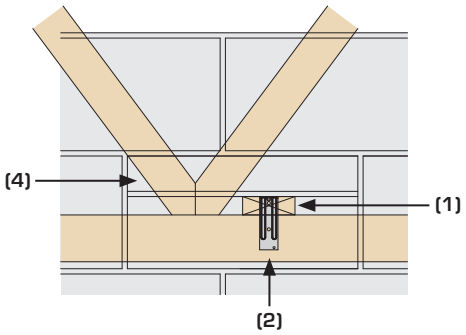
- Install PFS or HDGS on the 25 x 100mm longitudinal truss bracing (1).
- Ensure the position of the longitudinal bracing and strap coincide with a horizontal blockwork joint.
- The 90deg bend of the strap is to be held tight against the cavity face of the inner leaf of blockwork (2), preferably located on a substantial piece of blockwork, i.e. over the centre of a full block, with a single cut block over the strap (3). Notch the blocks to accommodate the angle of the strap and ensure notch is fully mortared.

Fixing to Solid Noggins (Between Trusses)



- Ensure the position of the straps coincides with the horizontal blockwork joint.
- Install PFS or HDGS to underside of solid noggins (1). Noggins to be fixed horizontally to avoid twisting of the restraint straps.
- The 90deg bend of the strap is to be held tight against the cavity face of the inner leaf of blockwork (2), preferably located on a substantial piece of blockwork, i.e. over the centre of a full block, with a single cut block over the strap (3). Notch the blocks to accommodate the angle of the strap and ensure notch is fully mortared.
- Fix straps to noggins/trusses with 8no. 3.4 x 35mm square twist nails, evenly spaced along the length of the strap (for NHBC warrantied buildings, in accordance with NHBC Standards 2017 section 7.2.8, 4no. 50 x 4mmsteel screws or 4no. 75 x 4mm round wire nails, with one fixing into the third rafter, shall be used instead of square twist nails).

Fixing to Longitudinal Truss Bracing / Additional Longitudinal Binder (Fixed to Truss Ceiling)

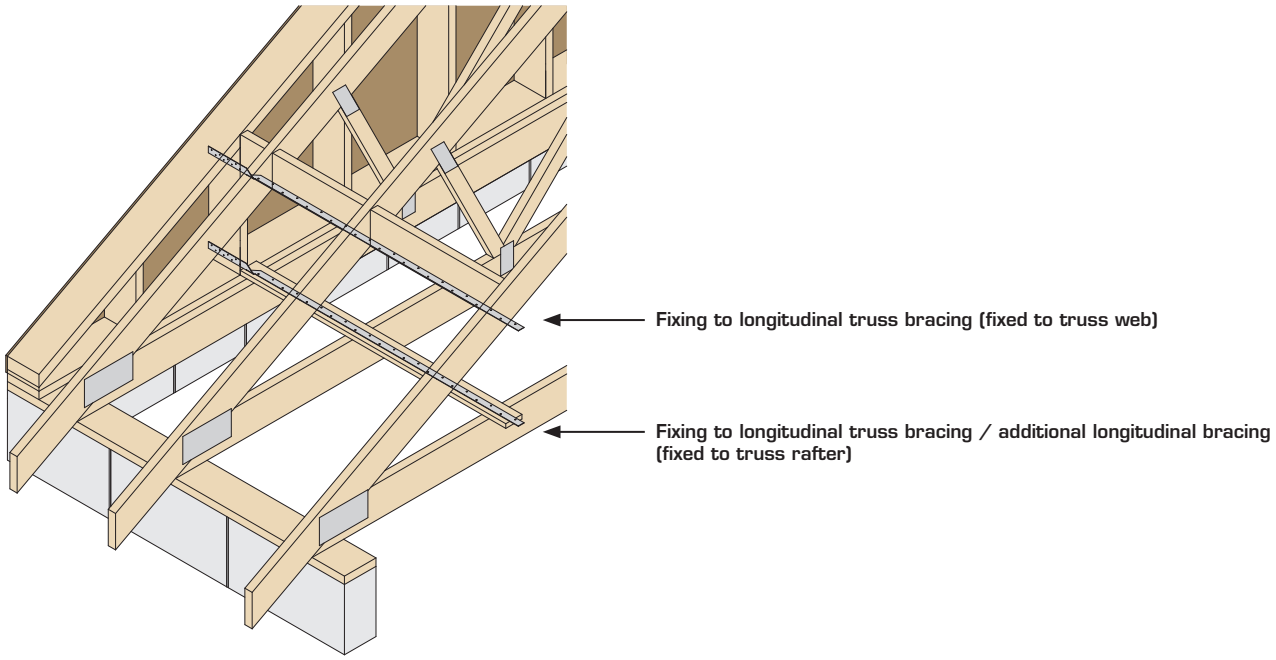


- Install PFS or HDGS on the 25 x 100mm longitudinal truss bracing (1). Bracing to be fixed to each truss with 2no. 3.35 x 65mm round wire nails.
- Ensure the position of the longitudinal bracing and strap coincide with a horizontal blockwork joint, where this is not possible inserted a cut block to suit strap location (4).
- The 90deg bend of the strap is to be held tight against the cavity face of the inner leaf of blockwork (2), preferably located on a substantial piece of blockwork, i.e. over the centre of a full block.

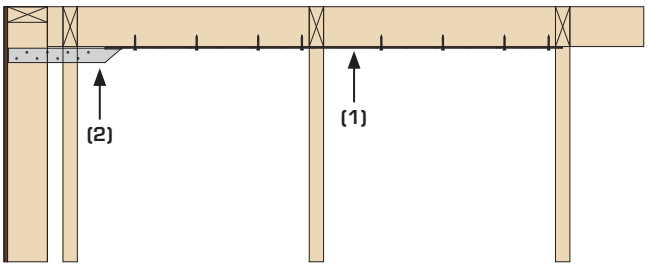
Restraint Straps (Domestic Roofs)

HORIZONTAL RESTRAINT (TIMBER GABLES)

- Gable panel to be restrained vertical using VRS or LDGS holding down straps at suitable centres.
- External masonry to be connected to gable panel using suitable FT timber frame wall ties.
- Solid blocking required between truss and wall.

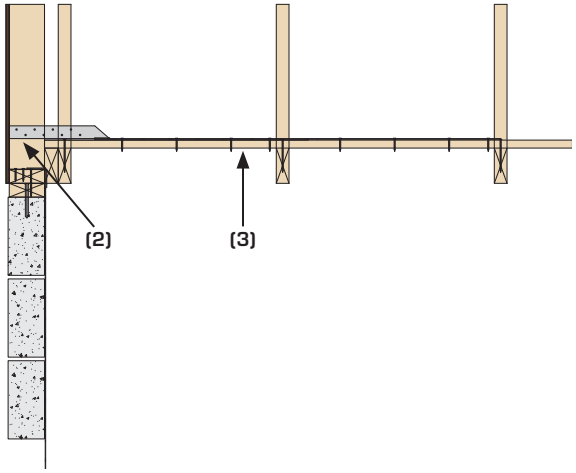


Fixing to Longitudinal Truss Bracing (Fixed to Truss Web)



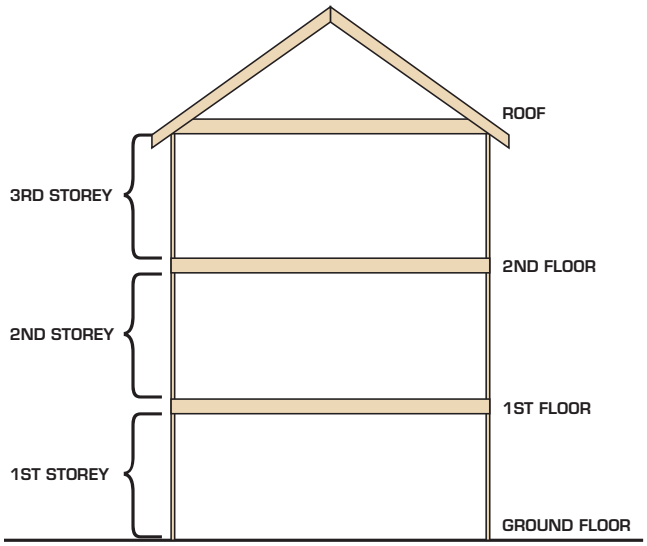
- Install RST-3 to underside of solid noggins (1). Noggins to be fixed horizontally to avoid twisting of the restraint straps.
- Strap to be fixed to face of vertical stud (within gable panel) with 3no. 3.4 x 35mm square twist nails (2).
- Fix straps to noggins/trusses with 8no. 3.4 x 35mm square twist nails, evenly spaced along the length of the strap (for NHBC warrantied buildings, in accordance with NHBC Standards 2017 section 7.2.8, 4no. 50 x 4mmsteel screws or 4no. 75 x 4mm round wire nails, with one fixing into the third rafter, shall be used instead of square twist nails).

Fixing to Longitudinal Truss Bracing / Additional Longitudinal Binder (Fixed to Truss Rafter)



- Install RST-3 on the 25 x 100mm longitudinal truss bracing (3).
- Ensure the position of the longitudinal bracing and strap coincide with vertical timber studs (within gable panel).
- Strap to be fixed to face of vertical stud (within gable) with 3no. 3.4 x 35mm square twist nails (2).
- Fix straps to longitudinal bracing with 8no. 3.4 x 35mm square twist nails, evenly spaced along the length of the strap (for NHBC warrantied buildings, in accordance with NHBC Standards 2017 section 7.2.8, 8no. 25 x 4mmsteel screws shall be used instead of square twist nails).

Restraint Straps (Domestic Floors)



3 STOREY HOUSE

Lateral restraint of the walls can be provided by the floor, the restraint must be provided parallel and perpendicular to the floor joists.

The type of restraint straps required and the centres at which they are placed depend on the joist end detail and region in which the house is built.

The information we provide has been compiled using the minimum requirement from Building Regulations 2010 approved document A, Scottish Building regulation domestic, NHBC standards and British Standard BS 5628-1;2005 Annex D.

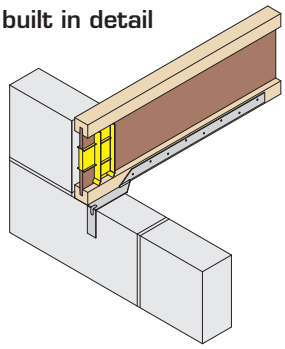
These have been issued as guidance only, the overall responsibility lies with the Building Designer.

For 3rd floor and above please refer to the building standards or building designer for guidance.

All straps require a full storey of block work above to achieve the full 8kN declared load capacity.

PARALLEL RESTRAINT

PSB strap with built in detail

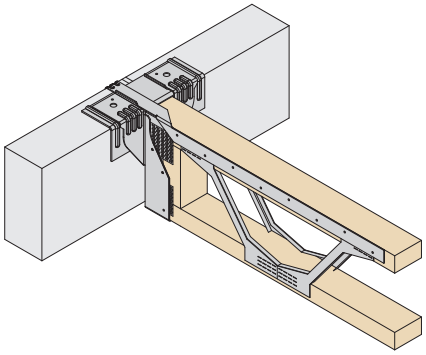


— The strap should be nailed with a minimum of 8No 3.4 x 35mm Square Twist Nails into the joist top flange/chord

Detail	Region	Floor Level		
		Ground Floor	1st Floor	2nd Floor
Built in	England & Wales	Where joists have a minimum bearing of 90mm no additional restraint is required (additional PSB straps required each side of opening where openings exceed 600mm)		PSB straps required at 2m max centres
	Scotland			

Please refer to page 135 for further information on PSB straps

PST strap with non-restraint hanger

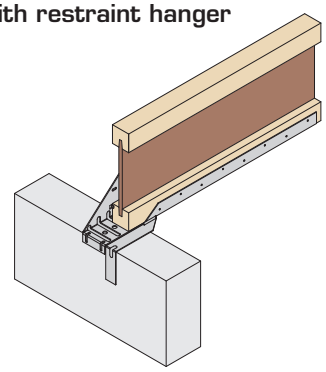


— The strap should be nailed with a minimum of 8No 3.4 x 35mm Square Twist Nails into the joist top flange/chord

Detail	Region	Floor Level		
		Ground Floor	1st Floor	2nd Floor
Non-Restraint Hangers (JHI/JHIR/ RB-JHI/RB-JHIR)	England & Wales	PST or PSC required at 2m max centres		
	Scotland	PST or PSC required at 2m max centres		PST or PSC required at 1.25m max centres

Please refer to page 135 for further information on PST/PSC straps

PSB strap with restraint hanger



— The strap should be nailed with a minimum of 8No 3.4 x 35mm Square Twist Nails into the joist top flange/chord

Detail	Region	Floor Level		
		Ground Floor	1st Floor	2nd Floor
Restraint Hangers (RA/HRAD/ RADS)	England & Wales	No additional restraint is required (additional PSB straps required each side of opening where openings exceed 600mm)		PSB required at 2m max centres
	Scotland			PSB required at 1.25m max centres

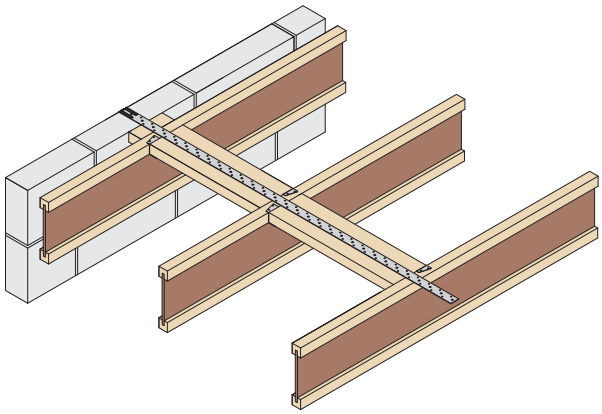
Please refer to page 135 for further information on PSB straps

Restraint Straps (Domestic Floors)

PERPENDICULAR RESTRAINT

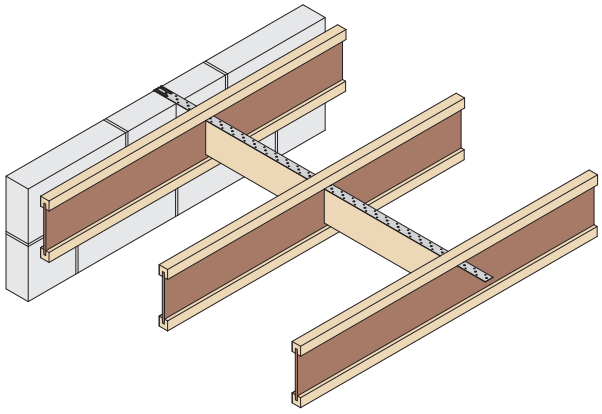
Detail	Region	Floor Level		
		Ground Floor	1st Floor	2nd Floor
Perpendicular	England & Wales	PFS or HDGS required at 2m max centres		
	Scotland	PFS or HDGS required at 2m max centres		PFS or HDGS required at 1.25m max centres

PFS surface fixed to I-Joist



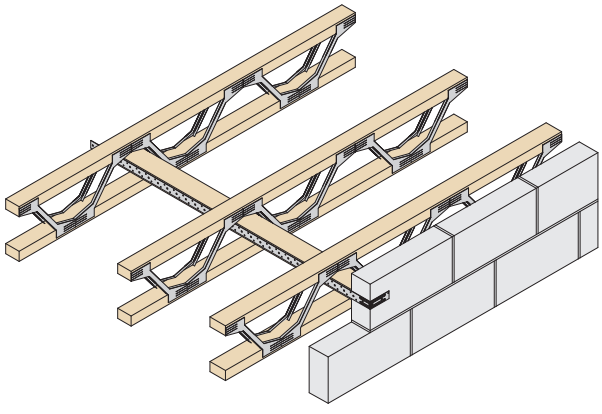
- Noggins to be installed between the I-Joists with 2No UZ Clips staggered either side (Noggins to be minimum half the depth of the joists x depth of flange
- Once nailed into position a skew nail is placed in the opposite corner to secure connection
- After fitting all noggins the PFS strap can then be located tight to the block work and centred on the noggins
- The strap should be nailed with a minimum of 8No 3.4 x 35mm square twist nails evenly spaced and into at least every joist
- Strap must extend over a minimum 3No joists

PFS through web of I-Joist



- Cut a small slot in the I-Joist web, just under the top flange
- Slide the PFS through the slots and position tight against the block work
- To provide a fixing for the PFS, noggins must be installed between the I-Joists (Noggins to be at least half the I-Joist depth, to a maximum of 150mm x minimum 38mm wide)
- Each noggin should be nailed in place through the I-Joist web
- The strap should be nailed with a minimum of 8No 3.4 x 35mm square twist nails evenly spaced into the noggins
- Strap must extend over a minimum 3No joists

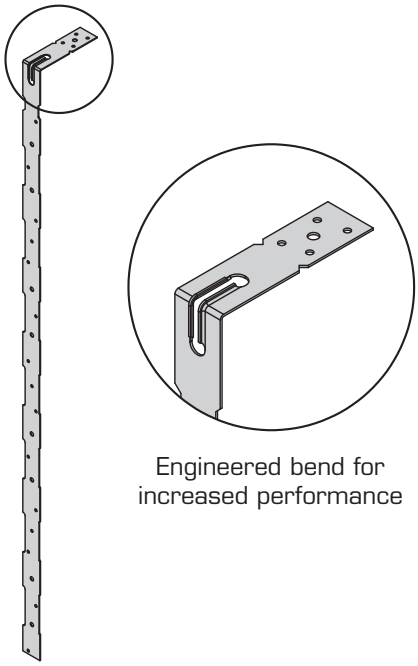
PFS through web of Open Web Joist



- Strongback to be installed as per manufacturer's guidelines
- Position PFS tight to block work and centred on block
- The strap should be nailed with a minimum of 8No 3.4 x 35mm square twist nails evenly spaced into the noggins
- Strap must extend over a minimum 3No joists

VRS

Vertical Restraint Strap



Engineered bend for increased performance

The VRS is an engineered strap that has been designed to provide a convenient and secure method of fixing wall plates to timber and masonry walls.

Features & Benefits

- Designed to provide optimum performance
- Thinner profile than a standard tie-down strap with strengthening ribs, achieving the same performance as a traditional 30 x 2.5mm strap

Material Specification

- 30 x 1.2mm Galvanised mild steel - Z600

Approvals

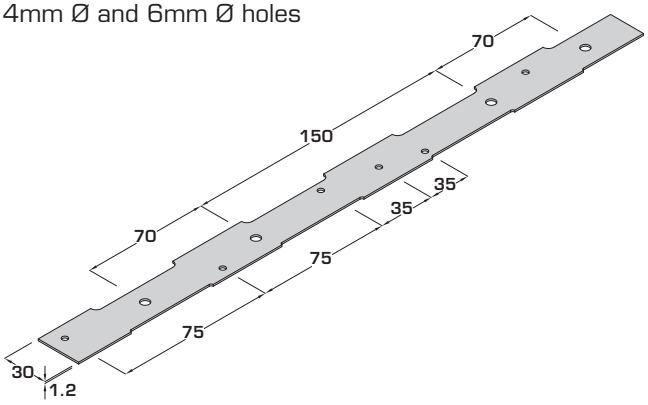
- CE marked and tested in accordance with EN846-4
- Meets NHBC Technical requirements

Fixings

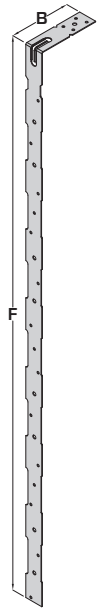
Dependant on application.

Dimensions (mm)

4mm Ø and 6mm Ø holes



Available Sizes



Product Code	F (mm)	B (mm)
VRS-900-100	900	100

Load Data

Performance	Fixings (3.4 x 35mm)			Characteristic Tensile Capacity (kN)
	Wall Plate (3.4 x 35mm)	Timber Stud (3.4 x 35mm)	Wall (#8/6mm Nylong Plugs)	
Fixed to 3.5N/mm² block work & nailed to min C16 grade timber wall plate*	2	n/a	6*	4.80
Nailed to timber stud & wall plate (min C16 grade)	2	8	n/a	4.80

*Fixings to be specified by building designer

RST

Restraint Strap Twist

RST-1

RST-2

RST-3

The RST is a high performance strap which can be used to resist uplift.

Features & Benefits

- Unique geometry allows a fixing on two planes without the clash issues of standard twist straps
- Suitable for timber frame and masonry walls
- Can be used independently or in addition to truss clips/framing anchors/hangers
- Also a suitable strap for providing lateral restraint to timber gables (see page 129)

Material Specification

- 30 x 1.2mm Galvanised mild steel - Z275

Fixings

To be specified by building designer

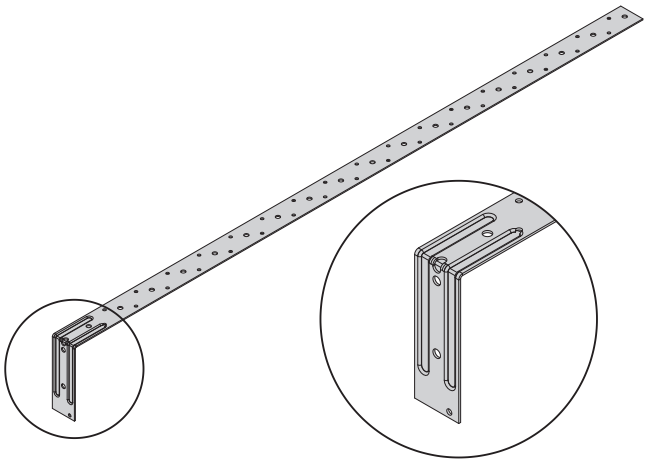
PFS

Pre Formed Strap

The PFS is an engineered strap that has been designed to provide enhanced performance and greater flexibility of use.



Engineered bend for increased performance

Features & Benefits

- Typically used for lateral restraint in floor and roof applications
- Exceeds performance of traditional 30 x 5mm strap

Material Specification

- 35 x 1.5mm Galvanised mild steel - Z600 or Z275 (with edge protection)

Approvals

- CE marked and tested in accordance with EN846-4
- Meets NHBC Technical requirements
- Meets Homebond technical requirements

Fixings

Dependant on application

Code	Description	Box Qty
547389	3.4 x 35mm Square Twist Nails - LOOSE	500
141185	3.4 x 35mm Square Twist Nails - COLLATED*	2,500

*For use with Paslode PPN35Ci

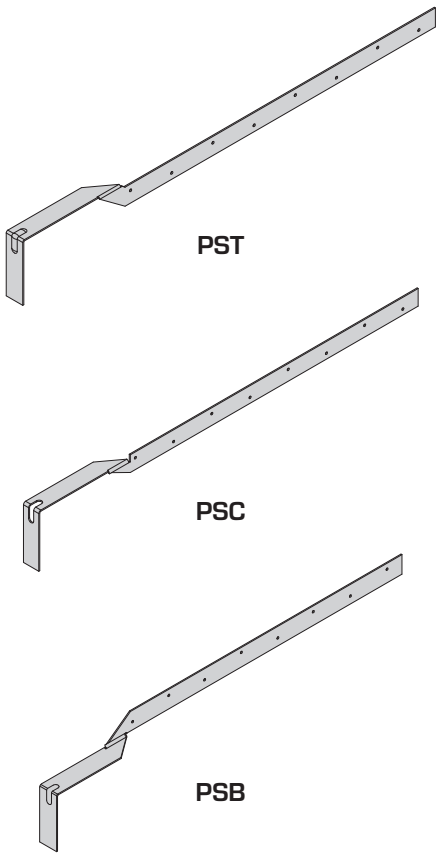
Built into 3.5N/mm² block work & nailed to min C16 grade timber**	8No	8.80
Flat Strap	n/a	10.80

**Full storey of block work required above the strap to meet performance.

PS RANGE

Pre Formed Strap



The PS range provides required parallel restraint to block work for joist hangers and, where required, build-in details.

Features & Benefits

— Typically used for lateral restraint
— Straps suit various blockwork sizes

Material Specification

— 30 x 2mm Galvanised mild steel - Z600

Approvals

— CE marked and tested in accordance with EN846-4
— Meets NHBC Technical requirements

Fixings

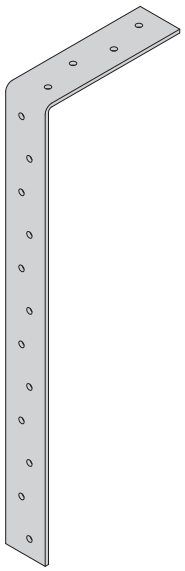
LDGS

Light Duty Galvanised Strap



The LDGS is a light duty traditional strap.

Features & Benefits

— Typically used for vertical restraint

Material Specification

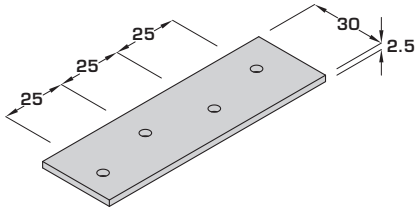
— 30 x 2.5mm Galvanised mild steel - Z275

Fixings

To be specified by building designer

Dimensions (mm)

6mm Ø holes spaced at 25mm centres



Available Sizes

FLAT STRAP

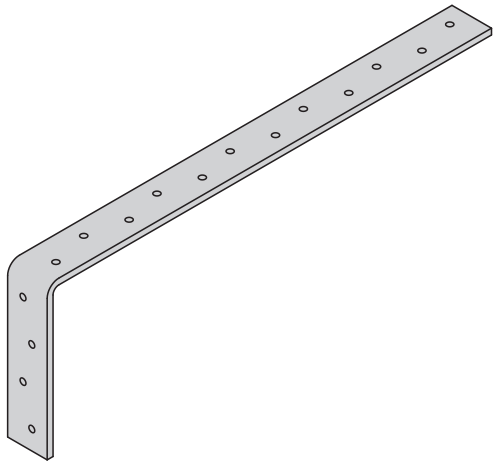
*Full storey of block work required above the strap to meet performance.

HDGS

Heavy Duty Galvanised Strap



The HDGS is a heavy duty traditional strap.

Features & Benefits

— Typically used for lateral restraint.

Material Specification

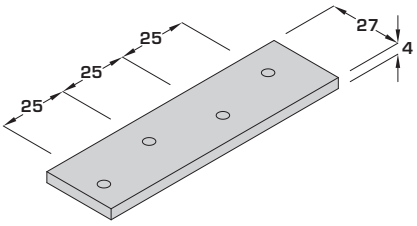
— 27 x 4mm Galvanised mild steel - Z275

Fixings

To be specified by building designer

Dimensions (mm)

6mm Ø holes spaced at 25mm centres



Available Sizes

Load Data

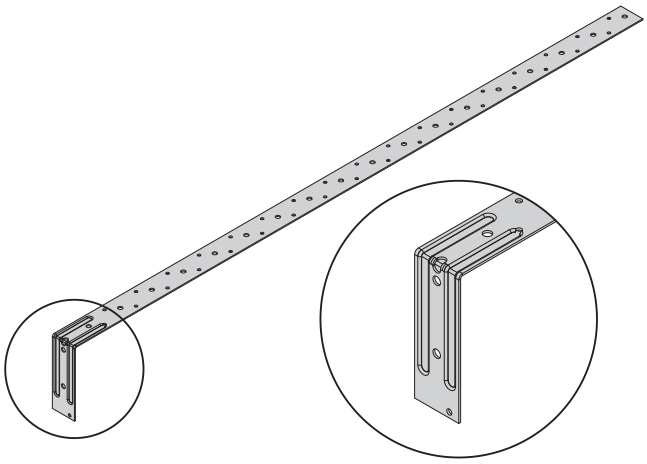
Provides a minimum load requirement of 8kN per strap at 2m centres to meet BS EN845-1

Performance	Fixings (3.4 x 35mm)	Characteristic Tensile Capacity (kN)
Built into 3.5N/mm² block work & nailed to min C16 grade timber*	8No	10.5
Flat Strap	n/a	25.2

*Full storey of block work required above the strap to meet performance.

ST-ST-PFS

Stainless Steel Pre Formed Strap



The ST-ST-PFS is an engineered stainless steel strap.

Features & Benefits

— Stainless steel allows for varied applications

Material Specification

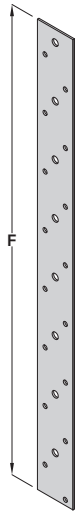
— 35 x 1.2mm Austenitic Stainless Steel

Fixings

To be specified by building designer

Available Sizes

FLAT STRAP



Product Code	F (mm)

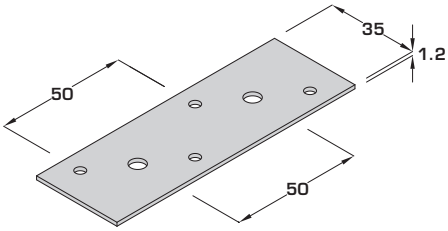
Dimensions (mm)

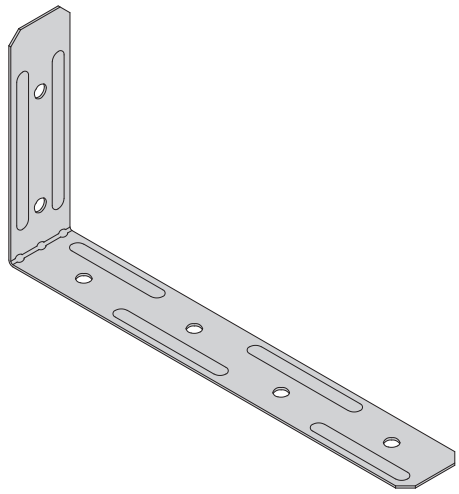
4mm Ø and 6mm Ø holes



WBR

Window Bracket

The WBR window bracket attaches timber window boards to the internal face of a masonry wall.



Features & Benefits

— Specially designed solution to a common application

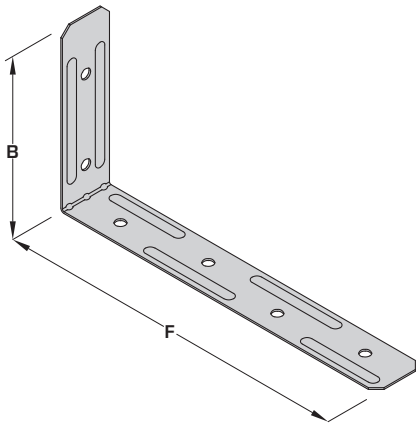
Material Specification

— 30 x 1mm Galvanised mild steel - Z275

Fixings

To be specified by building designer

Available Sizes



Product Code	F (mm)	B (mm)
WBR	200	100

Dimensions (mm)

6mm Ø holes
