

AR19

Husqvarna's handy and efficient hollow tine aerators are self-propelled and feature free-wheeling outer tines for better maneuverability around corners and tight areas with less turf damage. Additional side weights allow for improved soil penetration and are removable for reduced effort when lifting or for altering weight balance on slopes and inclines. A folding operator handle on the AR19, lift handles and semi-pneumatic front tire allow for easy transport and storage.

FREE-WHEEL DESIGN

The unique patented free-wheeling outer tines allow users to continue aerating without losing speed on tight corners and without damaging turf.

COMPACT DESIGN

The compact design allows for convenient operation.

REAR-WHEEL CONTROL

Rear-wheel control, allowing adjustment of working depth and settings for maximum stability.

DETACHABLE WEIGHTS

Additional side weights allow for improved ground penetration and are removable for reduced effort when lifting or for altering weight balance on slopes and inclines.

TECHNICAL DATA

Engine manufacturer	Briggs & Stratton
Power	5 hp
Drive System	V-belt, permalube chain
Frame Construction	Welded Steel
Powder coat paint	Yes
Aerating width	19 inch
Aerating depth	0-3inch
