

Why Choose Stamping Instead of Pavers?

Pavers have been a consistent standby. They can offer an easy, strong, and durable solution. They can also have several downsides. Often, pavers sink and move, creating safety concerns. Additionally, unsightly weeds and moss grow between them, reducing their aesthetic appeal.

Stamping—which is simply concrete stamped with a pattern—eliminates these problems. Because the concrete is poured in a single piece onto proper subgrade, there is rarely a shifting issue. And because there are no free spaces in between, it's virtually impossible for weeds to grow.

Stamping is a great alternative because it offers homeowners

- Pattern choice
- Color choice
- Design choice
- Durability
- No unsightly weed and grass growth
- Quick installation
- The “WOW” factor

Also, customers are surprised that stamping estimates are typically the same or oftentimes lower than paver estimates. Consider getting a stamping estimate from Kessel Concrete for your paver job today.
