

# Bark Mulching

A freshly mulched property neatly defines beds and borders and brings out the very best in your plantings. Adding a layer to your mulch beds every spring will help to retain soil moisture during the summer months and adds nutrients to the soil as the mulch is broken down. Mulch should be maintained at about a 3" or less layer, more than that and your trees and shrubs may suffer. Our crews will be sure that a nice even layer is spread around landscape plants and to keep mulch away from ornamental tree & shrub trunks to avoid bark rot.

DelleChiaie Landscaping will deliver & install premium bark mulch, we can either install bark mulch by hand or for the larger areas we use the BB302 Bark Blower.

Did You Know:

## Weed Control

Experience has shown us that bark mulch not only makes our gardens look beautiful, but also creates a healthy weed-free environment in which our plants can thrive.

Experts agree that applying mulch in a recommended depth helps keep weeds from taking over our gardens. A layer of mulch approximately 3-inches thick cuts down on the amount of air and sunlight reaching the soil preventing weed seeds from germinating.
