Electric Motor Mount Design Instructions

Made with 1/4" plywood

Painted with Elastomeric paint

Installed with 2" wide velcro strips

Cardboard eBoat Power System
12-volt Electric Trolling Motor
12-volt marine battery

How it works

- An electric motor mount is constructed with 1/2-inch plywood.
- The motor mount is secured to the stern with Velcro.
- A 12-volt marine battery is installed in the front compartment of the boat between the boater's feet.
- A section of PVC pipe is installed around the rudder and accelerator handle allowing the boat captain to steer the boat and adjust the speed of the boat.

Fishing in an eBoat

Notice the Velcro strips around the top of the stern bulkhead that secure the electric motor mount on top of the stern.
