

EuroFirefighter 2

Fire Commander and Fire Engineer Manual

There were 6,701 Building Fires and this is what we learned

Paul Grimwood PhD, FIFireE
Kent Fire and Rescue Service

'I have been a student of Paul Grimwood for decades and find his principles and paradigms of the fire service engaging. The fact that his work is recognized and respected in code standards speaks volumes. Paul has not only been a voice of reason but an advocate to integrate appropriate extinguishment and ventilation tactics and the application of effective water flows (GPM / LPM) to be safe and successful. He has personally witnessed the efficiency and application of proper placement of hose streams and flows during his detachment to the FDNY during its years of heavy fire duty in the South Bronx. His observation of the ventilation practice of the FDNY and those of other departments throughout the world was the foundation of his concept and submission of Tactical Ventilation to the Fire Service'.

Battalion Chief (ret) Jerry Tracy
Fire Department New York
