RHD® Garage Door Designs

About Ranch House Doors

In 1990, Mike Neal started building custom garage door parts in his own garage in La Mirada, California. His dream was to make the best custom garage doors in the world — one door at a time. He faithfully put his hand to the plow and forged what is today Ranch House Doors, Inc. North America's leading custom garage door manufacturer.

In 2004, Mike passed away after a long fight with cancer. Although Mike is no longer with us, his vision remains the focal point for his family who continue to run Ranch House Doors, Inc. Every member of RHD is proud of his legacy and look forward to serving you with the same attention and craftsmanship that Mike, our dad and leader, taught us over the years.

We have continued Mike's dream by expanding and improving our product lines through the years. Today, we offer customers an extensive range of real wood garage doors, gates and front doors. We are also partnering with Ackue, Inc and introducing the Fatezzi-Ranch House environmentally friendly faux wood garage doors.

Elements™ Collection
Faux Wood Garage Doors

Ultimate Curb Appeal

Homes with front-facing garage doors take up a large portion of what people see from the street and will have a big impact on a home's curb appeal. Using plain vanilla garage doors can make an otherwise beautiful house boring. Wooden garage doors will dramatically enhance a home's curb appeal and value. Ranch House Door Elements faux wood garage doors bring together the best of natural wood's beauty and proven polymer composite engineering. The faux wood claddings are molded from real wood to replicate the intricate texture of natural wood. Unlike other composite materials that are heavy and manufactured with unrealistic replication of wood grains, the Elements 1/2 inch high definition faux wood truly replicates everything including imperfections of natural wood like deep irregular pockmarks, knots, cracks, and holes up to 1/4 inch deep. Once installed, they are virtually indistinguishable from real wood.

Ranch House Elements faux wood doors do not have the drawbacks inherent with natural wood. It is lightweight, yet very strong, more durable and easier to maintain than real wood. It is UV resistant and virtually impervious to moisture and will not rot, split, or crack even in high humidity, desert heat and freezing weather conditions.

The Elements faux wood claddings are installed using proprietary adhesives with minimal mechanical fasteners. As a result, the claddings will not delaminate over time. All Ranch House Elements garage doors come with a three-year limited product warranty.

Our faux wood claddings are available in a variety of wood species like Pecky Cypress, Clear Cypress, Oak, and Mahogany. Door claddings can be painted or stained to create any desired finish. Ranch House Elements garage doors are available in a variety of pre-designed styles or can be custom made according to customer specifications. Optional decorative hardware straps, clavos, door handles and pulls are available to enhance the character of the doors.

The Elements Collection faux wood doors are "green" friendly. Our doors help reduce environmental impact by minimizing use of real wood resources and door replacements over the life of the faux wood door versus real wood door. It also lowers homeowner utility costs because of the product's good insulating properties.

Faux Wood Advantage

❖ Polymer composite faux wood with realistic high definition wood grain. Looks and feels just like the most expensive real wood garage doors without the drawbacks of natural wood.

❖ Proven technology backed by over 50 years of chemical industry experience in a Fortune 100 chemical company.

❖ Minimal maintenance. UV resistant, impervious to moisture. No cracking, splitting, warping, and rotting. All weather cladding—withstanding high humidity, desert heat and freezing weather conditions.

❖ Lightweight & strong cladding. Cladding density comparable to cedar, cypress and pine wood. Adds less than 50 lbs to a standard 8'x 7' insulated metal garage door. Cladding installed without mechanical fasteners. Eliminates metal corrosion or water damage.

❖ Green building product. The Elements Collection faux wood durability reduces environmental impact by minimizing use of natural wood resources and door replacements over the life of the door versus real wood doors. Cladding insulation properties reduces energy consumption.
