## Important Safety Instructions

- Use this product only for its intended use as described in this manual.
- Do not allow children to use this product.
- If any part of the Topsy Turvy® tomato planter appears to be damaged or malfunctioning, discontinue use immediately.
- When the Topsy Turvy® tomato planter is full, it will be heavy. Use caution when lifting it and support it from the bottom.

## Contents

- Rotating Top Hook
- Lid
- TopsyTurvy® Grow Bag
- Hook
- Watering System
- Tomato Seedling
- Potting Soil
- Scoop
- 3/16" Drill Bit
- Drill

## You Will Also Need

- Soil
- Tomato Seeds
- Potting Soil Mix

## Before You Start

1. Purchase a tomato seedling and potting soil mix from your local gardening store. Tomato seeds will not work with the Topsy Turvy® tomato planter, and other types of seeds are unavailable.

2. Find a suitable location to hang your Topsy Turvy® tomato planter.
   a. Make sure the location has a solid wood surface that can be drilled into to hold the included hook, or if you have an existing hook, make sure that it will be able to withstand a minimum load of 50 lbs.
   b. Make sure the location has access to plenty of direct sunlight (minimum of 6 hours of afternoon sun), and a water source if possible.

3. Drill a hole into the solid wood at the location you want to hang the Topsy Turvy® tomato planter, and screw the included hook into wood until completely secure.
   a. **DO NOT HANG IN SHEET ROCK, VINYL SIDING, OR ANY OTHER NON-WOOD SURFACE/MATERIAL.
   b. **REMEMBER TO DRILL THE HOLE HIGH ENOUGH FOR THE PLANT TO GROW BELOW THE BAG.

## Installation

1. Remove all components from the Topsy Turvy® tomato planter and hang the planter on the hook via the rotating top hook.
   **NOTE:** You may want to initially hang the Topsy Turvy® via a rope that can be temporarily lowered during installation.

2. Insert the watering system into the planter. Secure it by keeping the hooks on the sides of the watering system into the metal ring of the planter. Place the lid on top by sliding the tabs into the outer disk and pressing onto the metal ring. You are now ready to use your Topsy Turvy® tomato planter.

## Watering

Once you have set up your Topsy Turvy® tomato planter, you will need to water it as frequently as once per day. This is especially important during dry or hot days.

1. In order to water your tomatoes growing in the Topsy Turvy® tomato planter, completely fill the watering system with water daily.

2. The watering system is able to hold up to 1 gallon of water, which will slowly drip water into the soil, keeping your tomatoes sufficiently watered throughout the day.

Watering Amount ——— Water more if the soil is dry and the leaves start to curl up or become wilted.
