

Where we got started

We view ourselves as the old school guys. With work ethic and drive, that has been almost lost in our new age of service providers. We personally take our customers expectation and try to accomplish them more efficiently each time.

Having some of the highest production equipment on the market, coupled with the experience to know how to utilize it to its full potential.

The outcome is beneficial to all parties involved

Our production speaks for itself

Who We Are

We are the little company with big production.

Being employed for other local business for well over a decade, we decided to take a risk and start our own service company. We established in 2011 and we went LTD.in 2013

20+ years of personal experience in our local industry, with loyal cliental for as long. We pride ourselves in having the reputation of the highest production in our area.

We Specialize in Excavation

Done-Rite Daylighting Oilfield Service
Ltd.
Box 991
Charlie Lake B.C. V0C 1H0

Picture is a 5day project from start to finish with one truck

**Pride is what drives us,
production is what gets us
noticed, and loyalty is
what keeps us going.**

Having our trucks purposely built for the conditions and weather for where we work.

We personally have worked with our manufacturer in building our equipment. Having our options designed and engineered to keep our trucks reliable in extreme cold. Along with a few extra tools to help with the upkeep and maintenance.

*“Remember... Its Safety,
Quality, and Quantity in
that order.”*

What we do

We specialize in digging holes, whether it's a complete safe work ditch with safe and legal slope, to the pile holes and locates.

2 Decades in the industry, operating what has been often referred to as, “the Swiss army knife of the oil and gas industry”. Our experience and knowledge of having the ability to offer more than digging holes.

We can offer our wash system for cleaning purposes, steaming jobs, culvert clearing pressure washing, amongst many other services including zero entry tools for blockage in piping systems etc.

Teamwork

Being very aware of our position in the industry we understand that there are times we will come across contaminated material. Having education on requirements, regulations and responsibilities we also offer our customers our LT license. For the removal and transport of contaminated soil to an approved disposal location using waste manifest. As set out by Environment Canada Hazardous Waste Regulations.

Having effective methods of taking material onto our equipment as dry as possible gives our customers yet another cost savings. Utilizing our spill piles for fill in the holes we dig. Another benefit is low consumption of water. Maximizing production times and cost saving on water usage.
