

What Is ACI Certification?

When looking for a concrete contractor, always seek one who is ACI Certified. Certification by the American Concrete Institute (ACI) is the gold standard in the concrete industry. With only about 2,300 certificates issued to contractors in Illinois, ACI Certification is one way to increase your chances of finding an experienced quality contractor.

When you hire a contractor who is ACI Certified, you can be confident that he or she

- has undergone rigorous testing
- has met stringent program requirements
- knows how to properly pour, finish, and protect flatwork
- is up-to-date on the latest industry trends and techniques
- performs work up to industry standards

American Concrete Institute
Always advancing

Concrete contractors are plentiful; those who are ACI Certified are not. When researching a contractor's credentials, be sure to ask about certification. Contact Kessel Concrete Construction today to discuss your concrete project with an ACI Certified professional.
